> themselves) that is designed to recieve these formats

So, maybe it's time for us hams to start looking around for
surplus MDT units at auction or whatever. First, we're going to need
to know manufacturers and model numbers for popular terminals...

> What conductor of the 3 conductor mic jack is the PTT? I need this info
> to build a cable for Poor Man's Packet.

Tip is the mic audio AND ptt... Putting impedance across this and the
sleeve will cause the radio to transmit... No, haven't measured the
minimum impedance yet; although dynamic and ceramic mic elements are
definitely enough... For packet use you'll probably need to use the
ICOM trick of coupling AF thru a capacitor and 2K resistor to PTT.

> for packet, should a 2 or 3 conductor 1/8" earphone jack be used?

Well... I'd opt for the 3-ckt plug; RING is used for power supply
to the headset VOX option, connected (I think -- can't find my copy of
the schematic right now) thru a dropping resistor to the battery.
If you use a standard tip-sleeve plug, you'll only be burning about
50 mA extra when it's plugged in -- but why waste it? I saw some
3-ckt mini plugs at the Winston-Salem hamfest earlier, for a buck
apiece (!) at only one table, so they're sorta hard to find.

This has been discussed here several times before (maybe time
for an FAQ entry ?). The various types of these systems use
formats that are unique to the companies that make them. There is
nothing sold on the open market (other than the MDT units
themselves) that is designed to recieve these formats. Some of the
formats have been reported to include "encryption" but I can't
confirm that (the ones I have been shown here in Houston do not).

>> Tree, but was centered in the Bay Area or LA or something like
>> that. Does the ARRL have an emergency way to "shut down" FD?
>> Perhaps in next years FD rules, there should be some mention of
>> a shutdown mechanism. Of course, one hopes pranksters, licensed or not,
>> wouldn't "trip" it just for fun.
Well....When I was "playing" Field Day about the time the
quake hit, I noted a BIG DECREASE in 6-land stations, all of
a "sudden" which I do not believe wasnot caused by propagation.
Point: Do we really need a "SHUT DOWN" rule to practice something
that comes "naturally"?

>need for this higher power level. In fact, a lower power level than VHF
>should be adequate now that we have the technology for ultra low noise
>front ends in the UHF range (which we did NOT when the UHF band was
>originally established).

UHF broadcast is authorized a maximum of 5 megawatts ERP, but that doesn't mean that the transmitters are necessarily more powerful than a VHF station. Antenna gain is a lot easier at UHF than low VHF. What runs up the power bill is the damn klystron. It's horribly inefficient compared to a good power tetrode. Limits on ERP at low VHF are 170 kw and high VHF is 316 kw. With those ERPs, the low VHF station still has a grade A coverage edge over the others.

>IMHO, NTSC television in the US should be confined to UHF with an ERP of
>no more than 250kw, and a required antenna gain of not less than 17db.
>HDTV should not be below 2 GHz.

That would reduce grade A coverage to under 20 miles, about 3 times less than present power limits.

>Cable TV may have made the broadcast market soft, but it COULD ALSO be
>a source of financial savings, by allowing the stations, especially UHF,
>to cut their power levels... and power bills.
>
>Cable systems can pick up excellent signals from UHF stations well outside

>technology of the 1970's.

Cable is mainly in the dense metro area well inside our grade A coverage. Where ERP helps is in the suburbs and exurbs where cable is non-existant or has poor penetration. A lot of people still resist paying $30 a month for something they can get for free.

>>Broadcasters use VHF for the same reason that 2 meters has better
>>area coverage than 70 cm. The longer waves refract around obstacles

>>better. Most of a broadcaster's grade A coverage is not line of sight.

>Mountains of course pose further problems that usually power cannot deal
>with.
>
>Most broadcasters are in metropolitan areas where this is not much of an
>issue since grade A usually covers the entire metro and outlying area.

For a 1000 foot tower over flat land the radio horizon is 37 miles out. Atlanta metro is 18 counties in a 67 mile radius of downtown. Naturally we don't put a 1000 foot tower downtown, it's out near the city limits. Add in the mountains and we need a lot of ERP to put a -60 dbm signal over our MSA. The downtown, Atlanta proper, population is 550,000 while our MSA is 2.5 million and most of the audience that's attractive to advertisers is out in the exurban ring. Ham style -140 dbm tuners just aren't feasible for consumer TV. The -60 dbm level lets us override most of the noise sources in residential areas and also allows us to service viewers with indoor antennas.

OK, please elaborate: how long a snake, how far hanging down, what
color, venomous-looking or not, vertically or horiz. polarized?

I might just try it on the tower if you think it will work.

>TV broadcast were all at UHF with 2 channel rather than 6 channel workable
>spacing, then the filter could be added more easily, and broadcasters could
>(should) lower their power levels.

Older tube sets had much higher intermod tolerance than even the latest
solid state tuners, though the new tuners often have a better noise figure.
The rules were established when tubes were king so if anything matters are
worse today than when the rules were set. Almost all sets today have no
RF amplifier and still have *separate* VHF and UHF sections. It may all
be in the same box, but the sections are still separated internally with
high and low pass duplexing. A few units do use a single oscillator to span
the entire VHF/UHF bands and a single passive diode mixer with no tuned
circuitry at all. They usually perform worst of all.

>Ever try to pick up Chattanooga (3,9,12,61) there in Atlanta? You are
>only barely outside of the B grade for the VHF's.

The Chattanooga stations are completely blocked by the mountains as
are the Greenville stations. I occasionally can pickup channel 13 in

Macon and once got Jacksonville FL for a few minutes. Since we have
2, 5, 8, 11, 14, 17, 30, 36, 46, and 69 in town, most DX is adjacent
channel and unwatchable.

>>It's far more important to add another half million households to your

>>once or twice in a decade.
>
>I've found UHF actually works better in downtown areas of big cities.
>Do the fringes add that much market? I suppose it can affect network
>rates some, but those guys are trying to cut back on you, now, as well.
>How many advertising dollars really come in from the fringes? Do you
>get much advertising from Athens, Macon, Columbus?

Our MSA is 2.5 million households. The city is only 550,000 and demographics
favor the suburbs and exurbs as far as our advertisers are concerned. Athens
and Rome are our primary out of MSA cities and we have news bureaus in both.
Macon and Columbus are separate markets with their own stations. They're
outside our coverage. I suppose there are some viewers with big outside
antennas who watch the Atlanta stations from down there, but we don't
count them.

We get very little revenue from the network, the CBS affilate even has
to *pay* their network for the priviledge of carrying their programing
and commercials. Our revenue is based on local and national accounts
that we service directly. Strictly local advertising, car dealers and
furniture stores and the like, makes up only a small part of our revenue.
Most of the advertising dollars come from national brand accounts like
Coke, Proctor & Gamble, Kraft, etc, plus a bunch of foreign car "brand
identity" advertising. They want a particular demographic, 18-45 with
income in the 22-50 thousand range (yuppies mostly). That's mostly in the
suburbs and exurbs in our market. We service that area well while our
UHF competitors mostly are stuck with the downtown audience of less
affluent viewers, 90% minority. Advertisers won't pay top dollar for
that demographic. Rural audiences, mostly older and poorer, are virtually
ignored by everyone.

It's critical to us to put a good signal out into the exurbs 50-60
miles out. It's our bread and butter. Urban sprawl is the name of
the game here. There are tract houses 60 miles out along the Interstates.
I-85, I-75, and I-20 all radiate like spokes of a wheel out from downtown.
Development has followed them outward, though most of the desirable
audience is in the northern half of the MSA. Very few of our viewers
live in incorporated towns.

While it's legal to modify an aircraft band HT for use in the amateur band, once you've modified it, it is no longer type accepted and has become illegal to use in the air band. Can't win.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Edwin Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation) including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques) have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those

interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise.

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

The latest version of the list can be found in the companion posting to this message, "Amateur Radio Elmers Resource Directory." If you sent me mail and are not on it, please resend as it may have been lost on the way or once it reached my host, or I am waiting on further revisions to your entry (with the list's increasing size, I like to keep the entries as descriptive as possible).

(Note to readers of Info-Hams Digest: Because of its size, the companion list is not (yet) sent via the mailing list. The latest copy can be obtained via anonymous FTP or FTP mail server from ftp.cs.buffalo.edu

under file ~/pub/ham-radio/elmers_list.)

Currently, the list is over 40 Elmers strong, is cross-posted to the news.answers newsgroup, and has become an invaluable resource for many, as well as an opportunity for the volunteers to share their knowledge. Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initals of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

(Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.)

Knowledgable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

17. callbook

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 12:00:51 UTC
From: ham@wam.umd.edu
Message-ID: <1992Jul1.120051.21430@wam.umd.edu>
Source record: 287986

Looking for info on the on-line callbook. Anyone know where one can find addresses for clubs? I worked the following over Field Day and need QSLs:

W0OJY - ???
AC4PD - ???
W4AQL - Georgia Tech Amateur Radio Club

Thanks for any help you can give.

Scott NF3I/VE3 for Field Day

18. What is the history of Morse code?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 12:19:00 UTC
From: nfunamura%mis2.DEcnet@nuwes-lll.navy.mil
Message-ID: <9207020218.AA17948@ucsd.edu>
Source record: 287889

>In rec.radio.amateur.misc, yee@mipgsun.mipg.upenn.edu (Conway Yee) writes:
...
>Presumably, Morse also developed Morse code. I presume that this was
>American Morse, the one virtually nobody uses anymore. Does anybody
>still use American Morse? ... or does everyone use International
>Morse? How were the combinations/symbols assigned? What were the
>considerations around the development of International Morse? Who did
>it?

Al N1AL writes:
...
>>The number 9, for example, was "long dash - dit".
>>Even today, you often hear people use "n" (dash - dit) as an
>>abbreviation for a 9.

And I thought the "n" was just the short/initial for "nine". But if someone didn't already post it, I understand that the "dit space dit dit dit" or "es" which is used on cw for "and" is derived from the American Morse code for the ampersand (&) character.

19. Amateurs on USENET List July 1992 Part 1/3

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 12:30:08 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Jul1.123008.26471@ve6mgs.uucp>
Source record: 288024

I would be pleased to take any e-mail updates to this list. I have split this list into three parts now. This first part contains primarily European calls with US call districts 1, 2 and 3.

Enjoy, 73 de VE6MGS/Mark -sk-

20. Amateurs on USENET List July 1992 Part 2/3

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 12:44:10 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Jul1.124410.26727@ve6mgs.uucp>
Source record: 288025

I would be pleased to take any e-mail updates to this list. I have split this list into three parts now. This second part contains primarily US call districts 4, 5 and 6.

Enjoy, 73 de VE6MGS/Mark -sk-

```
# Network address to name or call letters lookup table
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# bowen@cs.buffalo.edu as suggested by Paul Schleck/KD3FU
# archived for ftp @ nro.cs.athabascau.ca:hams/usenet-hams [131.232.1.1] as
# suggested by Lyndon Nerenberg/VE6BBM
# Please send corrections/deletions/additions to mark@ve6mgs.ampr.org,
# mark@ve6mgs.ampr.ab.ca or ...!adec23!mark (depending on how the ball
# bounces :-)
# Last update June 31 1992
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GENIE Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list, their addresses are
# listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
# WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
# Name Name of the individual.
#

21. Amateurs on USENET List July 1992 Part 3/3

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 13:05:01 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Jul1.130501.27100@ve6mgs.uucp>
Source record: 288026

I would be pleased to take any e-mail updates to this list. I have split this list into three parts. This third part contains whatever is left over ...

Enjoy, 73 de VE6MGS/Mark -sk-

```
# Network address to name or call letters lookup table
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# bowen@cs.buffalo.edu as suggested by Paul Schleck/KD3FU
# archived for ftp @ nro.cs.athabascau.ca:hams/usenet-hams [131.232.1.1] as
# suggested by Lyndon Nerenberg/VE6BBM
# Please send corrections/deletions/additions to mark@ve6mgs.ampr.org,
# mark@ve6mgs.ampr.ab.ca or ...!adec23!mark (depending on how the ball
# bounces :-)
# Last update June 31 1992
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GENIE Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list, their addresses are
# listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
# WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
# Name Name of the individual.
#

22. looking for a good FM stereo transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 13:11:38 UTC
From: wb9rsq@wb9rsq.ampr.ORG
Message-ID: <27129.wb9rsq@wb9rsq.ampr.org>
Source record: 287988

Does anyone know of a good quality low power FM stereo transmitter? I have tried
the Ramsey and DC Kits transmitters and both have problems.
The Ramsey kit has enough power, but the stereo pilot is not crystal controlled and will not remain tuned. Also the transmitter seems to loose power after extended use.
The DC Kits transmitter is junk from start to finish. It has only one good feature. The kit has a crystal controlled stereo pilot and it is solid. The power is to low. Also, the frequency is impossible to tune and will not stableize.
A friend helped me out by taking the pilot section from the DC Kits unit and replacing the pilot circuit in the Ramsey. This fixed the pilot problem with the Ramsey, but the power drop problem got worse. The output dropped so low
that the transmitter is nearly worthless.
With all of this in mind, is there a company that makes a kit or assembled unit that has a good quality pilot, stable frequency, and reasonable power level?
I want good quality sound to move stereo tvro audio around my home. This is the best way I know of and provides the flexibility I need. It is also nice
to put on the occasional cd or tape and hear it where I want. Any help in this matter would be greatly appreciated.

>
>I'd like to know if any hams are experimenting with using up conversion
>process to generate micowave RF above 2 GHz. It seems a lot of the
>current techniques are just to do direct oscillator or frequency
>multiplication to get up there, which doesn't work well for the linear
>modes.
>
>Any trying SSB on 10 GHz, for instance?
--
>| Phil Howard --- KA9WGN --- pdh@netcom.com | "The problem with |

yes, there are some folks out there doing it. I worked four stations on
5760 SSB (in 3 grids) and three on 10368 CW during the June VHF contest,
and know of a bunch of others on 10 GHz (contest next month!). The lower
microwave bands are also populated.

as for equipment, a series of "no-tune" transverters by KK7B and friends
has been described in QST and other places in the past few years. Down
East Microwave sells these as kits and complete units.

In England and Europe there is even more activity, particularly on 10 GHz,
with construction articles in the RSGB mag, "DUBUS", and "VHF Communications".

For the really ambitious, in the latest "DUBUS" there is a description of
a 76 GHz transverter.

Dave,

There is a program that you can paste or type into that will "play" the
text in morse on the Mac Speaker...

It is available from ftp.apple.com in the directory /pub/ham-radio under
the name: MorseCodeV1.2.sit.hqx. I assume that the program is shareware or
Public Domain since it is in Apple's anonymous ftp site...

Chuck

25. FARA hosts visiting ham from ex-USSR

The Framingham Amateur Radio Association will welcome Sergey Shkor from club station UC1AWZ (home call UC2AKP), Thursday, July 9, 7:30 p.m. at the basement of the Danforth Museum building (Lexington Street, Framingham; use entrance next to public-library parking area. Directions/info on 147.15 +)

Sergey is a radiosport competitor in the ex-USSR, and also teaches Morse code to youngsters in Minsk. He just graduated from a technical institute in Minsk with a degree in radioengineering.

All are welcome to drop by our open house. If you wish to bring along some kind of refreshment, that would not be discouraged. ...

26. How to find a university ham club

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 14:42:09 UTC
From: FBCABAC%CFRVM.BITNET@VTVM2.CC.VT.EDU
Message-ID: <9207011441.AA16959@ucsd.edu>
Source record: 287992

Here are some tips for locating a HAM Club at a university:
1. Look for meeting notices in the school paper (your club
doesn't do this? Shame!)
2. Scan the rooftops for ham-type antennas. This worked for me.
3. Many clubs receive funding from the student government, for
which meticulous records are kept. Ask the student government to
show you a list of student organizations - hopefully, a ham
club will appear on the list. This approach assumes you can
find student government.....
4. Any other ideas?

Ross N4OJU FBCABAC@CFRVM.CFR.USF.EDU

27. Yaesu ft101-b

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 15:22:18 UTC
From: mostler@omega.sim.es.com
Message-ID: <1992Jul1.152218.25637@javelin.sim.es.com>
Source record: 287994

I am looking for any information that someone might have on the Yaseu ft101B. How much older is it than the 101E. Was it a good radio, or did it have receiver overload problems like some of the earlier yaseu equipment . When was this manufactured in comparison to the other 101 models.

Thanks,
Mike N7MEL

Hi YLs and OMs,

I have a question about sending QSLs to a station called ZC4IW.
ZC4IW told me to send the QSL to an adress in London, which was:

JSBH
?
?
London U.K.

I did not copy more !
Does anybody know this JSBH (perhaps a installation of military ?) and the
address ?

30. RACES Bulletin #228

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 15:45:51 UTC
From: enge@almaden.ibm.com
Message-ID: <9207011545.AA23164@ucsd.edu>
Source record: 287995

Msgid: $RACESBUL.228

TO: ALL EMERGENCY MANAGEMENT AGENCIES/OFFICES VIA THE ARS
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.228 DATE: June 29, 1992
SUBJECT: OPS: "Don't ask me to do that -- I'm a
communications expert!"

At critiques hams occasionally contend they are "communication
experts" and shouldn't provide other work. That viewpoint has its
merit, and points to some possibilities worth considering.
Certainly, being asked to be a "go-fer" is below our ability and
is taken advantage of in on occasion.

Preparing for the need for "go-fers", messengers and such is what
good Radio Officers provide. You find this in top-quality Field
Day managers who plan for the varied tasks to be performed, not
just operators. In effect, they match need and people in accord
with their interest and unique talents, whether they are 'hams'
or not. Those very good at "go-fering" are given those tasks.
[Civil Air Patrol cadets and Scouts are good at this. They don't
have to be a licensed Amateur to participate.] Example: In one
county, a Radio Officer enlisted local farmers as members. Why?
So their gasoline reserves (for tractors, etc.) can be used for
emergency generators if local gas stations no longer can pump gas.

There are many skills required in modern communications, not just
that of a radio operator and message handler. An astute Radio
Officer learns to expand activities and interest in emergency
activities beyond just that of operating equipment and handling
traffic. Many skills can be implemented just as there are many
skills utilized in Field Day activities, whether its cook,
driver, operators, registrar or other essential task.

EOM.

5. Subscribe to the Ham-Univ mailing list. In addition to
participating in discussions with other ham clubs, there is also
a mail-retrievable index of all subscribers. Check for subscribers
from your domain. (E-mail me for subscription information)

6. If your campus has its own zipcode, do a search for that zipcode on
the callsign server (note that this won't work for club calls, only for
that occasional faculty member or student who has given his campus
address in the callbook). The Buckmaster CD supposedly has club
stations.

7. Ask a friendly Physics, EE, or Comp Sci professor or knowledgable
staff member. (this may not work as "knowledgable faculty" is
sometimes an oxymoron :-).

8. Send E-mail to Luck Hurder, KY1T at lhurder@arrl.org. He is with
Club Services at the League and can consult records going back to the
beginning of time. He can advise you on whether a club exists, or has
ever existed, at your school.

Another cheap (pun intended) shot at CW. An SSB crystal filter costs
around $100 and up. I can build a 100-watt CW transceiver for less.
At Dayton last year, I bought two soft-touch microswitches, which I
installed in a pill bottle and made a paddle. Total cost, including
1/4-inch stereo plug, <$3. It certainly sounds better on the air
than any $2 microphone.

CW certainly is less expensive, and a good CW rig is pretty easy to
build. Further, many people like CW. But, what we need in this
hobby is some tolerance. Broadly painting CW enthusiasts as "gasping
geezers" is unproductive at best, and divisive at least. My license
class allows me to use any mode and band allocated to Amateur Radio
in the US. If I like CW, who am I hurting? If you don't like it,
you don't have to use it. You don't see CW operators attacking RTTY,
AM or other modes, at least not on here. As it stands right now, CW
knowledge is required for certain classes of amateur license in the
US. Regardless of who you think is to blame for this situation, it's
the law. Attacking CW fans is not going to help change the FCC
regs regarding CW requirements. We're all hams, and we all enjoy
the hobby (singular). So, let us layoff the cheap shots and snide
comments. 73.

Hi...

One of my new goals in life is to put together a QRP 20 (or maybe 30) meter CW station that I can take day long backpacking.

There are many nice places to hike not too far from here (including the Smokey Mtns) and my son (9 and also a ham) like to day hike..sometimes to the top of fairly tall mtns.

Thought it would be great to be able to go for about a 3-5 mile hike and then instead of rushing down the mountain, throw up a resonant dipole and use a gell cell and operate for an hour or 2.

Does anyone have any recommendations? The A&A QRP transceiver designed by Gary Breed and the Oak Hill Research both looked pretty good. I have a HW9 that I haven't built yet ... but think it might be too big...

What about keys...has anyone used the Vibroplex Brass Racer with the built in keyer? Thought instead of building in seperate keyers for all the rigs I hope to build in my life, that this type of paddle/keyer may be a good solution.

Any help is appreciated...

>up being QRP.

I got in a big argument with a local ham about this. He runs a
MONSTROUS mobile antenna on 75 meters. It is mounted on four spring-
loaded whip mounts. It is about 10 inches in diameter with a loading
coil the size of a small trash can and has a brass toilet ball
float at the tip. He claims this setup is just as efficient as a
full-sized dipole. Arguments about radiation resistance of a 12-foot
long antenna don't persuade him. It may be significant that he
runs a full 1500 watts (plus) into this monstrosity, so perhaps
it is not as efficient as he thinks.

Our local ham store (HSC Electronics) has good-quality brass J-38
reproductions for $10.95 and plastic-base keys for $5.95.
It's insane to spend $22.00 or $35.00.

From: brucec@tekgen.bv.tek.com
Message-ID: <932@tekgen.bv.tek.com>
Source record: 288019

All the instructions I've seen so far for incoming
QSL Bureaus in the US request that you send them
SASE's that are 5 x 7.5 inches. So I looked for
envelopes this size and so far haven't found any!
I started at the 'general' merchandise stores (Safeway,
Payless) and worked my way to the 'specific' office
supply and stationary stores. I've even looked them
up the Boise Cascade Catalog. Boise is the one of
the largest office supply dealers here in the NW.

They've got 10 pages envelopes with about a dozen
manufacturers. Only one manufacturer has a 5 x 7.5
(Associated), and Boise was out of stock on those!

These envelopes may be as rare as the rare DX QSL's
I'm trying receive with them!! I hope my QSL bureau
isn't inconvenienced when I send them a more standard
size - like a 6 x 9 - which several manufactures produce
and are stocked by stationary stores.

There are two types of "trichlor". Both are used as solvents. One is
called trichlorofluoroethane and the other trichlorofluoroethene, if
my fuzzy memory serves me. One has been banned, and the other is still
in use. Anybody know the whole story?

I successfully used this technique on an old BC-348 WWII-surplus reciever.
The trick is to (1) Rinse it REALLY well to get all the soap residue out
from the nooks and crannies, and (2) bake it at very low heat for a few
hours in the oven (with the door cracked open) to drive out all the moisture.

Source record: 288023

The Washington Post recently did a report on refugees from Mostar, Bosnia-Herzegovina, which noted that "except for one ham-radio operator," communications to the city were completely cut off.

From what I am hearing, YU4 hams are doing incredible work passing traffic to and from loved ones as the war rages. Packet links are continually repaired, stations in Sarajevo manage to come up despite the problems with electricity and heavy shelling. ... Meanwhile, hams in other parts of what was Yugoslavia are also passing traffic. I heard that at least one HF station was set up in a refugee camp in Slovenia to try to help people maintain contact with their loved ones. I'm also told that a newspaper in Slovenia is printing reports from Bosnia-Herzegovina that they hear via ham radio (I believe largely personal messages to help people find out about family and friends).

I cannot adequately express my admiration for their work.

I hope and pray the day comes very soon when they can get back to worrying about contesting and QSL cards. ...

All aircraft transmitters in the United States require TYPE ACCEPTANCE.
This is a very involved procedure, which is getting more difficult all
of the time. Also, Ham HT's are FM, aircraft are AM, and the power
rating for a 2 watt fm final would be in the 100's of Milliwatts when
A.M.'d. Broadband usage is another problem--aircraft tranceivers
transmit on a range of 118 to 136 MegaHertz. The latest type acceptance
also requires very stringent frequency accuracy over a wide temperature
and altitude range. Bottom line--not very practical to consider
modifying an fm H.T.

47. Re: Field Day rules question

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 20:40:06 UTC
From: alan@bambam.es.com
Message-ID: <1992Jul1.204006.27333@dsd.es.com>
Source record: 288021

Years ago I was a member of the ARRL's Contest Advisory Comittee, and during the time that I was on the CAC, there was some discussion about making some changes in the Field Day rules to accomodate some "special interests", but after all of the debate, someone correctly pointed out that Field Day is *not* a contest at all. You will note that no awards are given to the "winners". The only thing that you get for your efforts is having your callsign listed among the many hundreds of calls that are published in the Field Day writeup, perhaps near the top of the list if you did well. Year after year, despite the ARRL's attempts to de-emphasize the contest aspect of Field Day, many of the participating groups still make Field Day into a contest. The question also arises occasionally, if Field Day is not a contest, why is there a scoring system? A good question, indeed. For some of the participants, Field Day is a lot of fun, and for others, especially newcomers, it can be a bit bewildering and perhaps intimidating. Most of our operators this year were new hams; many with no-code Technician licenses. We tried to get everyone who was up at the site to operate a little bit and get their feet wet. In some cases it took some coaxing and coaching before they got the nerve to make that first QSO. Those of us who are more experienced and comfortable about communicating by radio sometimes take it for granted that if we can do it, anyone can. After seeing what some of our "greenhorns" experienced, I am convinced that this is just not so. People do need to be trained and do need practice before they can become effective communicators. Field Day should continue to be an opportunity to allow newcomers to experience a less than friendly communications environment.

51. ARRL EMI/RFI Consumer pamphlet available from ARRL HQ

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-01 21:38:29 UTC
From: ehare@arrl.org
Message-ID: <227@arrl.org>
Source record: 287892
Cross-posted to: rec.radio.amateur.misc,sci.electronics,rec.radio.cb

We have just received our third printing. This time we went for 10,000.
This ARRL freebie helps explain interference and the issues involved to
a non-radio person.

It discusses, in non-technical terms as much as possible, the interpersonal
and technical issues involved in any interference problem. It is a good
way to open the door with your neighbor.

We also have our RFI Package. This contains a pamphlet, a general-tips
handout, and, perhaps most importantly, a resource directory that tells you
where you can buy filters, EMI-proof telephones and other useful products.
All of this is on paper because it contains non-electronic information.

These are available for an SASE from the ARRL Technical Department Secretary.
The EMI/RFI Package is large, so a 9X12 SASE with $0.98 postage will be
appreciated.

If anyone is in a real EMI "emergency" send me an email. Perhaps I can offer
some help and speed things along their way.

Here is a much easier way at least for the 6 land incoming bureaus. Send
$2.00 and 5 gummed labels with your callsign, name and address to the
following address;

Sixth District DX-QSL Bureau
P.O. Box 1460
Sun Valley, CA
91352

This will get you 5 5X7 envelopes that will be sent to you as QSL's arrive
via bureau. I have found this to work real well for me. I am not sure if the
other incoming bureau's do this also. Anyone know out there?

54. "Real" Morse on Radio

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 00:30:11 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9207020030.AA00761@cmr.ncsl.nist.gov>
Source record: 287879

Years ago I heard of a radio use of "real" Morse code. My boss of some years ago, W3FQB, tells the story that when he was stationed at one of the Pacific Island ionospheric sounding stations just after WW II, his lieutenant used to have QSOs between Guam and the Phillipines using "real" (not Continental) Morse. I can't rermember whether it was on military or ham frequencies.

The Lt. had learned Morse as a summer-relief railroad telegraph operator during his college days - the mid/late 1930s. The ex-Lt. is Dick Kirby, W0LCT, President of the International Telecommunications Union in Geneva for the past few decades.

55. SSB on 10 GHz

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 00:36:02 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9207020036.AA00768@cmr.ncsl.nist.gov>
Source record: 287880

Phil Howard wonders if anyone is using SSB on 10 GHz. Yes. Someone, call-forgotten-by-me, has demoed SSB on 10 GHz at W6JKV's annual 6-meter barbecue for a number of years. Using a little 60 cm diameter dish he works a station which is well out of line of sight and perhaps 20 km away. The exciter is an IC-202.
Also, the successful EME contacts on 10 GHz were using stable CW, of course.
... and the stations involved were privately-owned on modest suburban lots - no big comercial installations.

Except here in Southern California, where 70cm military radars are common.

I've been interested in designing an effective pulse blanker to deal with these things, but I lack data on their characteristics.

In particular, I need to know their pulse widths. If no pulse compression is used, then from the occupied bandwidth (about 8 Mhz) the pulses would be about 125 nanosec wide. These are narrow enough to blank with negligible effect to even a 56kb modem (whose bits are 17.8 microseconds long). On the other hand, if significant pulse compression is used (which seems popular in modern solid-state radar designs to reduce the peak-to-average power ratios), the job becomes much more difficult. Forward error correction might become the only practical solution.

I would think that an effective radar pulse blanker would have much wider applicability than 56kb packet links, too. Every hilltop 70cm repeater and remote base in SoCal, for example. Anybody else interested in looking at this problem?

Phil

Now why am I not surprised that the ARRL would come to the
defense of Morris?

Do the ARRL continue to fight to keep Morris part of amateur
radio?

Do the geezers really believe without Morris there is no radio.

Frankly, I am rather troubled by this.

I've worked down into the Carribean from the middle of the U. of Maryland Mall with my portable packet setup, including an HP-48SX as a terminal.

Snag some terminal software, grab a null-modem and appropriate serial cables (need one from HP), get batteries for your TNC and radio and go for it!

Look at comp.sys.hp48 for info on terminal programs.

I am considering buying a WIN 108 Airband Receiver, I have seen them advertised for 129 pounds - which seems like a good price (but I'm no radio expert).

Does anybody have any experience of this radio ? Any help and reccommendations would be appreciated.

Message-ID: <0y00mB5w164w@phsbbs.princeton.nj.us>
Source record: 287841

In response to the many E-mail messages I have received regarding the modifications to the Yaesu FT-415 to permit its use on the aircraft band, please note:

- According to the sheet I have, the mod is AM transmit/receive (no, I haven't voided my warranty to check this out)
- I honestly don't think it is "morally correct" to do this mod, so I am unwilling to spread this info any further than my file drawer
- Scott Dorsey suggests modifying an airband HT to work on the ham bands instead...of course this would be a legal option rather than the other way around

The only way to check out the validity of the information I have would be to perform the modification, thus voiding my warranty. Further, to test the mod, I would have to use this non-type-certified equipment on the aviation band, a clear violation of Federal law. I admit I'm chicken!

>or ham frequencies.

"Real" or telegrapher's Morse is still used occasionally on the ham bands,
although not as often as it was in years past. I have heard it myself, it
sounds neat -- many of the letters are the same, but those that are different
lend an interesting tenor to the rhythm. There is nothing in the
FCC regs that prohibit its use, but station ID must be made in International
Morse. Likewise, one could conduct a QSO in any language, as long as ID was
made in English.

I guess my FD effort didn't make much sense if you considered it
a contest.

I made non-line-of-sight QSOs on 432, 903, 1296, 2304, 5760, and
10 GHz--without setting up schedules before the contest. Of
course, if I had known all my QSOs would be through the trees I
might have picked a better site! Why no 3456? Well, it appears
that the 15 AH gell cell didn't like supplying 10 amps and the
transverter didn't like the low voltage so a pass transistor
open circuited, leaving me with virtually no output power.
Maybe next year...

In New Jersey and Pennsylvania, several members of the Delaware Valley VHF Society have put together 10 Ghz gear. K2UYH, K2SMN, myself and others are on 10 Ghz with gear. The VHF shop (or whatever it is called nowadays) in Mountaintop, Pa. sells SSB Engineering 10 Ghz transverters. I assume they are very dear (i.e. $$$$). We group bought oscillators and TWT's. I knew this was the only way I would ever get that stuff working as I am a digital/software nerd and RF in my hands needs terrific guidance ;-).

I love it when people compare retail prices ($100 SSB filter) to flea market prices ($3 key.) Let's compare your $3 flea-market key to the $2 flea market microphone. How do you fare then?

|> But, what we need in this
|>hobby is some tolerance. Broadly painting CW enthusiasts as "gasping
|>geezers" is unproductive at best, and divisive at least. My license
|>class allows me to use any mode and band allocated to Amateur Radio
|>in the US. If I like CW, who am I hurting? If you don't like it,
|>you don't have to use it.

I think the source of the heat in Julian Macassey's comments is that to get your license that allows you to use any mode in any band allocated to amateur radio, you have to do 20wpm code. It doesn't matter if you know everything about everything about radio -- if you can't do 20wpm you can't have that class of license. If you can't do 13wpm, you have even fewer options. What profit a $2 microphone to a no-code Tech who wants to work HF? Or a Novice who wants to work HF voice?

Personally, I don't care a lot about it. But I have to admit it seems a pretty goofy state of affairs that people can't have full access to the privileges allocated to amateurs unless they can do CW at some arbitrary speed. It's not like the rest of the test -- you can know nothing about satellites, miss all the questions and still pass the Extra. You can walk in without ever looking at the band plans, miss all the band edge questions and still pass any of the amateur radio exams. But if you don't know

your 20wpm code, you have to operate under a restricted license.

On the other hand, if you want to stem the controvery it's easy: Don't post a reply.

My memory is fuzzy this morning, but what the heck...

Sometime around the early 1930s, the FCC, or its forerunner the FRC, offered a commercial radio operator's license which required proficiency in both the International and American Morse Codes. This license had a great-sounding name, something like "the Extra First-Class."

|>
|>AL N1AL

I don't agree at all.

The thing about keys (or paddles, for that matter) is that they are mechanical devices. These days, electronics are very cheap and pretty foolproof. But there still is a large range of price and quality in mechanical components, and something that feels GOOD is likely to cost substantially more than something flimsy and crude.

I've seen some inexpensive keys in ham stores. I'd classify them as "cheap junk" -- they flex, the "bearings" (really just dents in the support screws) are sloppy, etc. Quite possibly I'm more picky than many others. Partly it depends on what you're after. If you want a simple cheap key for slow code practice, these cheap things are probably ok. If you want to send for hours at 20 wpm, they very definitely are not ok.

I have two straight keys -- one a classic brass land-line style key, the other a German "Junker" key that is a high precision mechanical marvel. Interestingly enough, though both are sturdy and of high mechanical quality, one feels right for slow speed (up to 12 wpm or so) and the other (the Junker) wants to go fast. I don't understand why; I just observe the fact and switch as needed.

I think the Junker cost about $30, "new surplus" a few years ago. You're welcome to call that "insane" if you wish, but I was happy to get it at any price, let alone a price as LOW as that.

One reason for high straight key prices for new keys may be simply that the market is small.

Incidentally, much of the above holds for keyer paddles as well. Unfortunately, in that case there don't seem to be any good ones available commercially at all. (Or maybe one -- I haven't had my hands on the British "Kent" paddle.) The popular ones vary, in my opinion, from marginal (Bencher) to atrociously flimsy (Vibroplex).

At W2SZ/1 we use mostly CW, although we are equiped for sideband. I am
also building (almost finished) my own tranverter which I plan to use for
sideband and CW. Sibeband is fine if signals are strong enough. Due to the
wider bandwidth sideband require about 10 dB more signal than CW.

Many bureaus will provide envelopes for you (at a
small cost), all you need to provide is extra money
and address stickers. You can send an SASE to your
QSL bureau manager to see if they can provide
envelopes.

Another hint: Many Greeting Cards and Christmas cards
use suitable sized envelopes. Visit your local
stationery store with a ruler, and look for the piles
of old cards on sale.

Good Luck and Good DX.

Sure, I've done it a lot. Most "well-written" PC programs don't try to directly address any PC hardware, and they run fine. A few, mostly "older" PC programs depend on certain unique characteristics of certain PC models, and loose a few features or run intermittitently under Soft PC.

Anyway, other than the latest, most recent version of K1EA's "CT" there is an equivalent Mac version for almost any PC program, so I hardly ever need to worry about this any more.

|> But if someone didn't already post it, I understand that the "dit
|> space dit dit dit" or "es" which is used on cw for "and" is derived
|> from the American Morse code for the ampersand (&) character.

The `N' is `short digit' for 9 -- but it doesn't come from the
initial. The short digits are derived from the single digits by
replacing all strings of dah-s with a single dah. Thus:

1 di-dah A 6 dah-di-di-di-dit 6
2 di-di-dah U 7 dah-di-di-dit B
3 di-di-di-dah V 8 dah-di-dit D
4 di-di-di-di-dah 4 9 dah-dit N
5 di-di-di-di-dit 5 0 dah T

Also, the decimal point is represented by R.

Thus, using short digits, the string, `147.195 MHZ' would be sent
FIGS A4BRAN5 MHZ.

Norman's right about the ES being American Morse for &.

This is a follow-up to the posting of a week ago (stop me before I post again!) ---

FCC TO INSTALL SPRINKLERS ON 20 METER BAND

To preclude a repetition of the near disastrous fire which struck the 20 meter band recently, the FCC plans to istall a sprinkler system on the band sometime in the fall. According to an announcement made last week by FCC Special Frequency Safety Engineer, Marvin Larpsnogg, the new sprinkler system will "sense the buildup of excess thermofrequency heating (TFH) and cool down the band before a conflagration can break out." Mr. Larpsnogg added that successful operation of the system could lead to the sprinkling of all Ham bands in the next few years, "provided water damage doesn't get to be a big problem."

-- GEARVAKf Bulletin, Vol. 21, no.1
(Spring 1981)

(for those who have not heard about the fabled 20 meter fire, please request a reprint of that article from me or another GEARVAKf fan, if such exist.)

86. Re: 56K Experiences

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 15:15:14 UTC
From: brian@ucsd.edu
Message-ID: <12v6i2INNe1v@network.ucsd.edu>
Source record: 287908

The radar has gotten so bad lately that pings between a ground station and our mountaintop 56kb site on 433 MHz get only about a 30% return rate. The ground stations don't have a problem hearing the hill; the hill is getting creamed by a radar that's probably over a hundred miles away in Los Angeles. (I suspect it's in Long Beach Harbor - that's about where the DF shows it to be.)

It's centered on about 431 Mhz, and has a different sound (rep rate and pulse width) than the usual Navy seagull-friers that we hear all the time jamming our repeater inputs. I can hear what sounds like one minor lobe, two intermediate lobes, and one main lobe from an antenna rotating at about a 12(?) second period.

Since the only cures for radar that I know of are explosives and noise blankers, we'll probably have to move to either 900 MHz or 220 MHz.

Given the lack of availability of 900 MHz converters, 220 would be the better choice, but the Southern California 220 band plan leaves little room for anything other than repeater inputs and outputs. The ARRL's proposed 150 kHz for weak signal and other non-repeater activities doesn't exist out here. A digital channel was not provided for.

Were we to use 220, I'd probably put the 56kb channel centered between two of the lesser-used simplex channels, and run moderate power. To the average narrowband FM receiver, the DSY modem looks like nothing more than a raised noise floor, and there is very little 220 FM simplex, so most people wouldn't even know it was there, and there would be little interference to it. I think a hundred watts (roughly equivalent to a 10-watt voice radio, since the signal is about 10 times as wide) ought to do it from the hill; home stations could run 10 to 20 watts and be heard just fine.
- Brian

>Curious to see if anyone else's experience parallels mine.

"Oh contraire, mon capitan" - Q (sp?)

I have had mine for 3 months and am VERY pleased with it. I know several others who have them and are equally pleased. I have had 0.00 problems with mine. The closest thing to a problem has been that a) when the battery dies, it DIES and b) one time I got an ERR on the display which was fine after an OFF/ON cycle. (That may have been from a loose antenna, but, I am reluctant to test that theory. ;-)

I have talked to a few people who had problems with their first ones and brought them back for replacements which worked fine, and were not hastled about returning it. (One guy went around twice.) I *DO* hope that the folks in the stores aren't putting the returned ones back on the shelf.

As for the design, I find it quite easy to understand and use. While, it is not perfect, it is a good radio and, for the money, it is feature rich:
* full PL tone support (RX and TX) with real freq's, not cryptic codes.
* full DTMF capability including DTMF squelch and a hang time on transmit so that you can let go of the PTT while you finish dialing.
* some handy things like REVerse (to swap the input and output freq's),
* settable defaults for offset, and a TX inhibit. (TX inhibit was nice for the period before I got my ticket in the mail and when my daughter asks to "see" it.)
* 3 priority channels (plus 12 regular and 1 'calling') with settable scan interval for scanning them makes it so I can listen to one repeater while listening for the local ARES net which is brought up with a PL tone.

I have performed several unscheduled shock, vibration and stress tests (dropped it, knocked it off the table, ...) and it has survived nicely. It has been baked in my car and rained on (a little) and still it lives. When I first got it I took it over to the FCC lab at work and put it on a spectrum analyzer and it was tighter than corporate security's commercial units. I thought it was cute that the belt clip also serves as a heat sink. The battery pack lock's onto the base and it comes with an alkaline pack too.

On the down side:
* You can't lock out a channel from being scanned.
* The antenna connector should be moved forward so it takes less abuse on your belt (and maybe reduce body shielding a little).

* The DTMF hang time is too long and should be configurable.
* The option to auto reply with a '#' when DTMF squelch is broken makes no sense, since it is IMMEDIATE (without waiting for the station that sent the DTMF tones to stop transmitting).

Under the "It would be nice if" category:
* I would prefer that the FUNC button latch if pressed once quickly, to allow one handed operation of functions (in the car).
* They could do more with DTMF, like an option to auto transmit DTMF when you key up and an option to re-establish DTMF squelch once it is broken.
* I'd like to see something about a 1/2 inch tall that slides on in place of the battery pack for when I am using external power and have removed the battery pack.
* There should be a quick-reference card along with the manual.

IMHO, (and my wife will gladly tell you what my opinion is worth), it is a decent radio for the price and it just plain works. 73 Magazine did a review of it in their February issue that was very good.

89. Tuning a 4 Square

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 15:57:44 UTC
From: Steve_Fraasch@GATEWAY1.ATK.COM
Message-ID: <00076.2792919356.18244@GATEWAY1.ATK.COM>
Source record: 287913

Subject: Time:11:33 AM
OFFICE MEMO Tuning a 4 Square Date:7/1/92
My wife's allowing me two free days in Wisconsin to tune W0AIH's 160m 4 square. In summary, the design stuff was done similarly to the method presented by Forrest, K2BT in Ham Radio back in '83: The desired current distribution is found using array theory, and serves as a known (current vector [I]) when solving the linear system [V] = [Z] [I]. MININEC is used to find self and mutual impedances, for a single element, Zii, and for the mutual terms, Zij. A math software package (you can do it by hand if you want) such as Mathematica, or MATHCAD is used to solve for [V], from [V] = [Z] [I]. The drive impedances to each tower are found by Zi = Vi/Ii. I used RF CAD Software SUPER COMPACT to design the network. To confirm that the solution is right, I re-applied the volage excitation solution from Mathematica to a 4 square on MININEC (Method of moments software like NEC solves for the current distribution by feeding the system known terminal excitations). The desired current distribution appears, which squares the RF-CAD network solution. Great theory, now for the hardware...and here's the problem:

The towers are an odd length (185' -> ~1/3 wave length @ 160m), and closed spaced (~.13 wave - the thing was originally designed for 80m). The towers are on a hill - not on level ground - and they are as much as 15 feet in height from each other. Lots of radials, but they're too short, and the ground is low conductivity rocks and loamy soil. Theoretical gain - even measured - is OK, but to really tweak it in and get all of that gain & F/B, we need to tune it. One method would be to actually measure the self and mutual impedances. But we cannot simply measure them, given the coupling among the array and scatterers nearby (Check your EM Green's functions, that's rubbish about 1/4 waves being decoupled. Anything out there is coupled.) The broadcaster's method is to sample the current of each tower at the maxima, and compare the relative phases and amplitudes. In our case, the current maxima occurs at 55', making this the best spot to sample it. Anyways, last November, I installed current sampling coils on each tower at 55'. I thought we'd have a great system to measure the relative tower currents. No, the system was corrupted by RF: a finger touch of the scope and sampling coax connector would change everything. I could not find any chokes large enough to decouple the shield current, so I gave up. We operated the ARRL 160m contest, saw gain and some F/B, but not enough (But it did work far better than Paul's elevated quarter wave, especially into EU). JAs heard (but not on the elevated), but not worked, hmmm (almost embarassing to admit for a 4 square). So, it seems it close, but not quite. Most of the contest was spent being jammed (25 hz off freq) by K3LID, and saying "what if this damn thing worked right?"

Since December, I've pondered this problem, and I've decided that a current probe at the tower bottom is better than none. I've read a lot of applied EM books and IEEE articles, and the best hand wave I've seen is that the field is transitional at the base, forcing the current distribution on the tower to be misleading. The broadcasters say stick the probe at least 10 - 20 feet off the ground. Despite that, they still recommend double shielded coax, bonding to tower, and decoupling with that big choke again. Stepping over the fence at some local Minneapolis AM radio stations revealed that they indeed go to all of that trouble. My God, it's only ham radio, right?

We go with current probes at the base, along with Paul listening at his home QTH (5 miles away), WA0PEV in his car talking back on 2 meters, K0KX in the shack, and me in the dog house twiddling as I'm stung by wasps. There's got to be a better way. Help!

It's only a hobby,
Steve, K0SF

Oooooh, better still, DON'T! Carb. cleaner generally has Xylene, and Methylene Chloride, and a bunch of other nasties that dissolve most plastics, paints, and rubbers without even blushing.

You would be better off using a nice detergent like '409 with a toothbrush, and then lots of water. When you are done, rinse with distilled water, and then bake for 5 hours at about 180F to dry it out.

After this ordeal, get your can of WD-40 and lubricate all contacts. You might want to use something better for the bearings (Dexron ATF is a good light machine oil)

>

93. PacketCluster Sysops mailing list

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 16:11:36 UTC
From: gross@ifsws1.sozialforschung.uni-stuttgart.de
Message-ID: <1992Jul2.161136.11597@news.uni-stuttgart.de>
Source record: 287928

Hi folks,

I'd like to invite all Sysops of PacketCluster nodes to a new mailing
list _entirely devoted to_ to Dick Newell's PacketCluster Software.

What you have to do to get in it ?

send a message to listserv@ifsws1.sozialforschung.uni-stuttgart.de
with a message body of "help" - this is to show you the commands
this mailing list server supports.
Then, send a second message with a message body of
"subscribe packetcluster <firstname> <lastname> <(callsign)>"

so if you are Dick Newell and your callsign is AK1A,
the line would be:

subscribe packetcluster Dick Newell (AK1A)

Also I did open an anonymous FTP account on my machine to supply
PacketCluster-related software, information files and databases.

FTP to 129.69.162.1, login as "ftp", choose any password.

Then "cd /pub" - that's where the things are.
Feel free to upload files to /pub/uploads, don't forget to leave a *.txt file
to describe your upload.

73! Frank

> Now why am I not surprised that the ARRL would come to the
>defense of Morris?
[...]

This comment raises a particular gripe of mine. Please excuse me, but I feel compelled to enter pedant mode.

Individuals and organizations are distinct entities! Just because someone works for a particular company, there's no reason to intuit that what he posts represents anything other than his own personal opinion *unless* there's an explicit indication in the message's content. Sure, a message issued in the name of an organization, like an official ARRL bulletin, represents the opinion of the organization but news articles posted under an individual's login id generally don't. In this case, the *ARRL* didn't come to the defense of Morse, an *individual* who happens to work for the ARRL did.

When we try to make an organization take responsibility for the opinions of one of its employees rather than more appropriately holding the individual responsible for what he says, the result is often that the organization comes down on the individual and we end up losing access to his opinions and expertise. Look around and you'll see all sorts of institutionally-erected filters on information; filtering information requests through public information offices, companies with read-only access to Usenet, etc. When those filters go into place the rest of us lose.

Heck, when you talk to someone on a repeater the air, you don't then decide that what you've heard the policy of the company he works for (or I suppose a more parallel claim would be that whatever you hear on a repeater is the opinion of the repeater trustee). It's not any different here.

I've used a Nye Viking (ok, but hard to adjust) and a Bencher (nice feel), but
to me, the ultimate keyer paddle is the capacitive paddle on the Heath
Micromatic (RIP, sob). No mechanics to mess up at all. You use it like flying
a helicopter: don't move it, just think about it.

My Micromatic is dead...I'm going to have to buy another one. The paddle is
just too nice.
(I think it's the CPU.)

I did not intend to contribute more to this thread but after reading this article I read rec.radio.amateur.swap. Over there, someone was advertising that he would pay $50 for a knob from a Collins rig.

Insane, Al?

People value different things. That's where hobbies come from. I was at a Railroad Museum this weekend with a flea market that had old model train cars for HUNDREDS of dollars.

Insane, Al?

I am told that if my mother had not so thoughtlessly thrown out my childhood collection of baseball cards when I went away to college, I would be several thousand dollars richer!

Insane, Al?

I like old keys. They were very well crafted and provide a link to our past. Can you say the same of a "look alike" key that is cheaper and in the stores now?

I like CW. Originally I learned the code to pass my test and then did not use it in 20 years of SSB QSOs. I recently rediscovered CW and am having a lot of fun using it to talk to people. It has advantages when I am running 100 W and a dipole that is not high enough. It is a challenge that I must overcome with my own wits, not by going out and buying fancy equipment that

would get my signal through for me.

You may think me insane, Al, but let me continue to use my old keys with CW and enjoy my hobby.

No, no, no...Halon's not Politically Correct, as it allegedly damages the ozone layer just like Freon allegedly does.

No CO2, either, as the quantities required to control a major band fire would be accused of causing more global warming.

Water is poltiically correct. Anything else would be tied up in court by environmentalists.

}Personally, I don't care a lot about it. But I have to admit it seems a pretty goofy state of affairs that people can't have full access to the privileges allocated to amateurs unless they can do CW at some arbitrary speed. It's not like the rest of the test -- you can know nothing about satellites, miss all the questions and still pass the Extra. You can walk in without ever looking at the band plans, miss all the band edge questions and still pass any of the amateur radio exams. But if you don't kno

w
}
Well, it's alot like letting people use USENET who don't know how to
operate a terminal. Who haven't quite figured out what the <CR> or
<ENTER> keys are used for.

These same people are probably the appliance operators that plug their MODEMS/TNCs into their rigs and hose up the digital modes:

o The guy who is running the wrong "code", so you get weird characters instead of the US 5-level code.
o The guy who doesn't use the carriage return key (nice black boxes at the end of the page).
o The guy who does carriage return/no linefeed (nice black box lines on the page).
o The guy who just drops his carrier and leaves the printhead (cursor) in the middle of a line.

Lot's of fun for the few of us using teletype machines
(the "straight-keys" of digital mode).

There should be different MODE licenses. A license for voice, morse, digital, and whatever. There should be protocol questions. If you pass the CW test, you should be able to operate ALL the CW fqys. If you pass the VOICE test, you should be able to operate ALL the VOICE fqys.

--
The PacketDriller is the finest network router available today and can route packets using *any* known protocol according to arbitrary specifications. It will only take you, the sysadmin, about 857 years to learn how to set those specification. Enjoy. -Truth in advertising

Because you have terminal brain damage? How do you expect us to diagnose your problems over the net?

By the way, packet radio is too expensive, also, because computers cost $2,000,000 and up -- just ask any supercomputer salesman.

I'd like to thank all of those people who sent me info on the B108G's remote interface pinout, and those who suggested I build a sequencer.

Well, I've built a sequencer, but I can't get it's insertion loss down below 3dB. And the RF section seems to be leaky enough that it radically alters the time-constant in the sequencing control section when I put more than 4 or 5W through it.

Does anyone know if it's possible to get ordinary relays to switch VHF at the ~10W power level? Am I going to have to buy a coax relay, and part with my $$$?

Let's not forget where the requirement for CW came from in the first place.
First, international treaty requires that anyone licensed to operate in the
HF bands know CW, so the FCC is just complying with treaty requirements.

Second, and perhaps more important, one of the main reasons that hams
were given HF bands in the first place (HF band space was hotly contested
in the days when this policy was formed) was to provide a pool of
self-trained
radio operaters to serve in the military in times of emergency. In those
days, at least, CW was a principal mode, and any op who couldn't hack the
code was worthless to them. Nothing comes for free, and there's lots and
lots of folks who would love to have our HF bands. Knowing the morse code
is part of our end of
the deal that gets us the bands in the first place

> -Ron

Nah, Ron, I'll tell you the real problem. We have this young nut around here who got him a computer, setup a BBS (Telephone type) and caused dismay for many people. He was even caught passing addresses/names/passwords/phone numbers to other users. His interest is set at harassing and trying to cause problems.

Well, when folks found out how to alleviate that problem (he no-longer operates a BBS) he got interedsted in HAM radio as he works at RAT SHACK. Believe me, we have traced his ker-chunking at his house (No-body knew where he lived before, but three good beams on 2 meters triangulated him) and at the store of course. That is only part of the problem. Transient Truck Drivers come through the city on the Interestate and park at the Petro (Truck Stop). Many times have we heard non-identified transmissions coming from there.

Anyway, that is my only complaint. People doing the transmitting without *ANY* license or consideration to get one.

73s de N5UYH Find me on 40 Meters plowing fire lanes to keep the 20 meter fire from spreading to 40 meters. I say install sprinklers!

> Are any of you using SoftPC to run ham PC applications on a Mac?

Sure! And I credit running Super Morse under SoftPC with getting me both the 5 and 13 WPM tests for my General ticket. Of course, its calibration constant is much smaller than on native PCs :-) I think it was 1200 or so for the iicx at home and 1800 for the iici-with-cache here at work.

I have noticed system 7 goes "out-to-lunch" once or twice a minute, it's doing *SOMETHING* that locks out all other activity. When Super Morse has the oscillator on it makes a "super-dah" out of whatever code element it was sending at the time. This was a minor annoyance.

I was completely flabbergasted when I put a CD designed for IBM PC use into the Apple CD player and was able to copy the CD's custom drive program from the CD to one of the "Soft PC" disks, then run the drive program and access the data on the CD! This was the Federal Record CD. All the other CDs I tried to use required the Microsoft Extensions which the version of SoftPC I have does not support. I hope to upgrade soon.

One bad thing, though. Lemmings runs about 10 *SECONDS* per graphics update cycle, making the thing just too slow to be useable... :-(

The Gary Breed transceiver uses a varactor for tuning, and might drift like crazy while hiking; possibly you could build it in a larger cabinet which is sealed to air to keep the thermal environment more stable. I don't know about the OHR design.

They have tried this in the past for the ARRL Simulated Emergency
Test. The problem is there are few people who have enough time on their
hands that they can drop everything on a moment's notice for a drill.

I have a snapshot of the schematic for a Brunswick Radio Corp. Models
17, 24, & 25. Anyone out there know from about what year this would
have originated? It appears to be a receiver. Anyone able to tell
me anything about it? Bands?

A code key is basically nothing more than a fancy on/off switch.
A good key should have adjustments for contact spacing and spring
tension, have a low-friction bearing, and be sturdy enough not to
flex too much. Either of the HSC keys meets these criteria.
With the fancier keys, you are paying for appearance and the
"ambiance" of having a fine old Morse code key. IMHO

>profit a $2 microphone to a no-code Tech who wants to work HF? Or a Novice
>who wants to work HF voice?

And it doesn't matter if you know everything about everything about how to operate using Morse code -- if you don't understand electronics you can't get a license to operate.

You might argue that the electronics knowledge is more "important" than the CW knowledge, but that's really just conceit on the part of people who have prior fondness of, aptitude for, and/or knowledge of electronics.

>Personally, I don't care a lot about it. But I have to admit it seems a
>pretty goofy state of affairs that people can't have full access to the
>privileges allocated to amateurs unless they can do CW at some arbitrary speed.
>It's not like the rest of the test -- you can know nothing about satellites,

>looking at the band plans, miss all the band edge questions and still pass any
>of the amateur radio exams. But if you don't know your 20wpm code, you have
>to operate under a restricted license.

It also seems pretty goofy that people can't have full access to the privileges allocated to amateurs unless they can demonstrate some arbitrary level of electronics knowledge. I'll bet that a larger percentage of extra-class hams out there use CW on a regular basis than home-brew their own rigs. In this day and age, the electronics knowledge you need to become an extra is just as unnecessary as the code speed requirement. You can be an active ham and contribute to the community and never touch a soldering iron.

BTW, CW *is* like the rest. You can pass the test without knowing any of the prosigns or punctuation. You could pass without knowing any of the vowels. You might even pass without knowing any of the digits. On the other hand, you *couldn't* pass the advanced written without knowing electronics. If your electronics knowledge is weak but your CW speed is great, you have to operate under a restricted license.

118. Morris is a cat

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 22:11:52 UTC
From: jkearman@arrl.org
Message-ID: <247@arrl.org>
Source record: 287683

Julian Macassey writes:

In article <222@arrl.org> jkearman@arrl.org (Jim Kearman) writes:
^^^^^^^^

Now why am I not surprised that the ARRL would come to the
defense of Morris?

Do the ARRL continue to fight to keep Morris part of amateur
radio?

Do the geezers really believe without Morris there is no radio.

Frankly, I am rather troubled by this.

Julian conveniently deleted my remarks. Rather than DEFENDING
CW, I merely corrected his incorrect observations that phone
is less expensive to operate. I went on to state that remarks
such as his were divisive to the hobby. If ARRL is fighting to
keep a code requirement as part of Amateur Radio, it's news to
me. The last I heard, it was an international treaty. I'm not
a geezer; I'm only 45. I operate several other modes besides
CW. Frankly, I am rather troubled by Julian. Therefore, he's
going into my kill file. Life's too short!

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

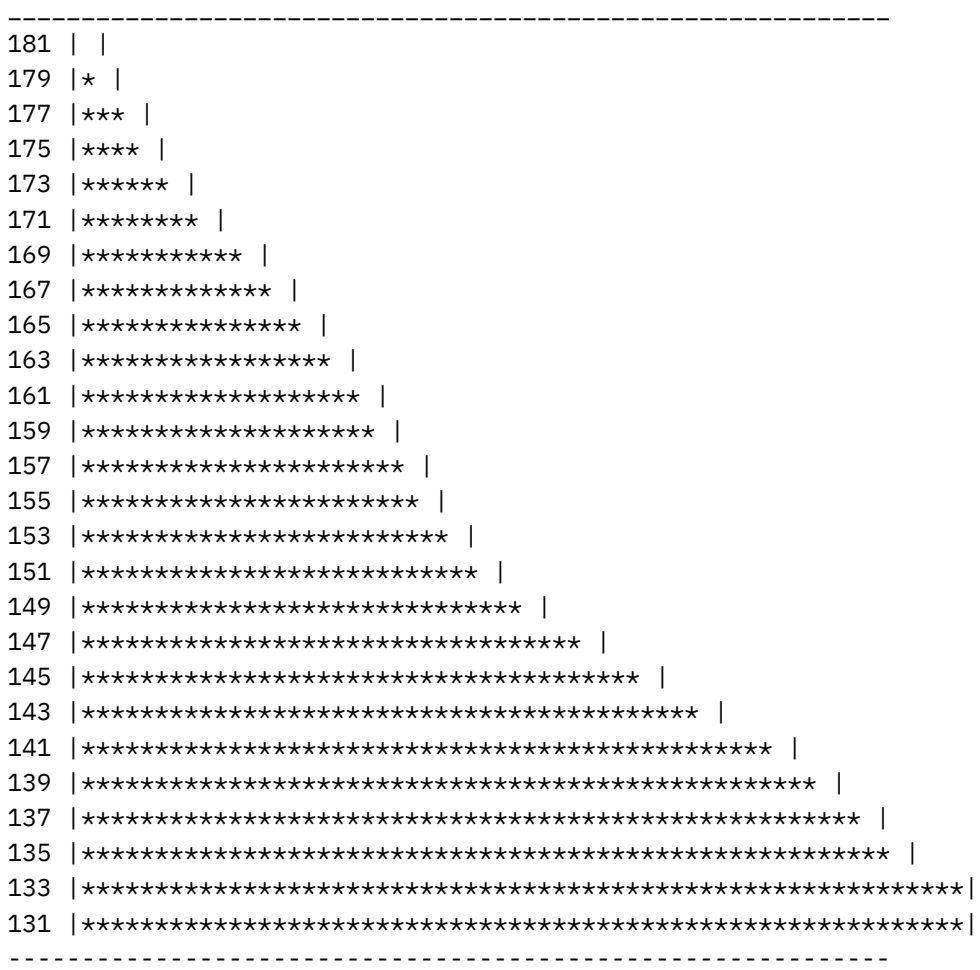

Chart Start: Day #126

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

__________	_____________________________________		___________________

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts. For more information, request the document "Understanding Solar Terrestrial Reports" from: "Oler@Rho.Uleth.Ca" or "COler@Solar.Stanford.Edu". This document, as well as others and related data and forecasts exist on the STD BBS at: (403) 756-3008.

121. Re: Mac and SoftPC

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 22:50:15 UTC
From: brucec@tekgen.bv.tek.com
Message-ID: <936@tekgen.bv.tek.com>
Source record: 287947

I have both a Mac and a PC (and a UNIX box, but that's another story) on my desk at work. I loaded up W7ZOI's Smith Chart program on the Mac and ran it under SoftPC, and it works!! I wasn't happy with the performance or graphics, but it DID work. It worked better on the PC. I have found some programs that actually won't run on the PC but WILL run under on SoftPC on the Mac!! So much for the name 'compatible'

But, really, using SoftPC is a desparate measure. In general, Mac software is superior to DOS software. That's why Windows was developed. My experience so far is that Mac software is also superior to Windows software. And as for performance, it is an axiom in the computer world that to get Windows software to run as fast as Mac software, you need about 2X the computer power on the Windows side.

This isn't to say DOS/Windows machines are worthless. I use 'em everyday and actually get work done with them. But after a thorough operational comparison, I prefer the Mac.

122. Re: looking for a good FM stereo transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-02 22:59:23 UTC
From: rd@hpscit.sc.hp.com
Message-ID: <50030018@hpscit.sc.hp.com>
Source record: 287962

Per the inquiry about a good FM stereo transmitter.

I discovered a classified in Popular Electronics for a low power
FM transmitter which I bought in kit form (it's a chip labeled
BA1404 that does all the work and various R's, C's, L's, a
pilot crystal, and a board). It uses L-C tuning to the station
so it not real stable (my analog FM walkman needs retuning after
a while), but the stereo is excellent.

It is pretty weak, broadcasting on a 18" wire hanging from the board.
It might be fine with a fixed FM receiver around the house, but with
the walkman it starts to get noisy a few rooms away.

Any hints how to get more power (different antenna lengths didn't seem
to help) would be appreciated.

Anyway, for what it's worth, the company is Ten Tronix, 3605 Broken Arrow,
Coeur d'Alene, ID 83814 (208) 664-2312.

Yeah, it's hardly ham radio. Apologies in advance for any net abuse.

Dick Dowell (rd@dtc.hp.com)

Message-ID: <1992Jul3.002725.26929@ncar.ucar.edu>
Source record: 287950

I want to jump in on this thread too!
First my disqualifications for doing so.
I'm a No-code and am glad Ham Radio has offered me a way to join
using my existing electronic and army ratelo experience without
having to learn the code (yet!).
There have been several (including outrageous) comparisons to CW.
Here's mine.
CW is equivalent to assembly language, not everyone likes it or
uses it. Some have to use it. It is difficult to learn for some,
it takes a long time to accomplish (without macros) what other
languages do easily (from the programmer/user NOT computers
point-of-view).
Assembly language runs on a minimum of overhead (RAM, disk).
CW runs on a minimum of bandwidth (~500Hz).
Another comparison (non electronic)
CW is the building block, simplest circuitry (osc., key, amp, antenna)
CW is building your own house with 2x4s and plywood and nails,
2mFM is buying yourself a mobile home (prefab).
They both provide shelter, one is quicker to move into, the other
built to your needs/wants.
CW can be transmitted in an emergency with a flashlight or car horn
(or smoke signal?).
My conclusion(?)
CW has its place in Ham Radio, it is not obsolete, and I haven't
taken the time to learn it, but at least now I'm into Ham Radio
and enjoying it. I plan to start studying the code this fall.

>to the defense of Morse, an *individual* who happens to work for the ARRL
>did.

Yes, my point exactly as you missed it was: Here we have
another example of the staff and officials of the ARRL spouting the
"Morris is good for you" creed. I have put up with decades of this
antideluvian attitude. And I do seperate individuals from organisations.
But if a catholic priest berates me about the evils of contraception am I
justified in stating that here we have the usual catholic church line?

Am I being pedantic enough now or should I drone on a bit more
so the slow ones can catch on?

> >defense of Morris?
>
> Because you have terminal brain damage?

Ah! Someone else accusing be of being a nutter. Why is it that
when things get down to the nitty gritty the usual response I get is
either: "Your mad!" or "Why don't you go back where you came from!"

I know I am mad and I am not going where I came from.

Which brings me back to understanding how my brain damge would
cause me to show no surprise at the ARRL "Morris is good for you"
credo. This means then that if my bean was working as designed I would
be shocked and surprised that the august ARRL is pro Morris?

Doesn't make sense to me, but then I a nutter.

Keywords: Spiders Critters Tuners

Interesting to read about the spider colony in Clay's ATU. Something similar happened here recently. At home I run a NOS mailbox 24 hrs, and I noticed that my PC started to hang with RAM parity errors. Funny, because my old XT does not have the parity chip installed. Puzzled, I took the thing to the workshop and discovered mice had invaded the machine through an uncovered expansion slot. Obviously, the had decided that being inside the warm PC was much more enjoyable than freezing their butts off outside the house.

Unfortunately they choose to use the 8088 CPU and a couple of other chips for a loo. I spent the last two nights bypassing electrolyzed spots on tracks, lifting, cleaning and replacing chips. I can tell you, it's pretty sticky stuff, and smells awfull when unsoldering. All the hard work done, the machine still won't boot up, I have written it off and now I am on the market for a replacement motherboard....

Cheers, Bert.

129. Willow Run Air Show Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-03 06:54:43 UTC

I will be going to the Air Michigan Air Show at Willow Run airport this weekend. I want to bring my scanner to monitor the air traffic. What are the frequencies that I should monitor? I have various Blue Angles and Thunderbirds frequencies. I understand the F-117A stealth and some A-10s will be there. Should I just monitor tower frequency?

No No No. Can't do water either. The quantity needed would flood California
and New York. Hmmm. Maybe not such a bad idea after all.

What we need is a massive infusion of Morris. That'd quench almost any
conflagration. After all, how much can you cuss when you're limited
to 0.05 baud?

Of course. S'called a grid leak.....

Of course modern solid state FETs already have one built in so this is only
for the Morris-ites.

Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB DX ARL ARLD035
ARLD035 DX news

Thanks to Tedd, KB8NW, the Ohio/Penn PacketCluster Network, EI6FR,
and Randy, N0TG, for the following DX information.

COCOS KEELING ISLANDS. VK9CB activity has been sporadic. He was on
14094 kHz RTTY at 1300z. He has shown up with VK4UA on 14187 kHz
around 1140z. VK4UA reports this operation should run until July
3rd. QSLs via VK6LA. VK9CB is planning to return to Cocos-Keeling
in December or January.

MOZAMBIQUE. Steve, C9RDM, reports that club station C9TDM is open
Tuesdays and Thursdays and on the air from 1600 to 1800z. Classes
are being conducted on those days to inspire new hams. C9TDM has
been heard on 21279 kHz starting around 1330z and going by call
areas. Check 28480 kHz around 1400z, too. Oge, C9RAJ, is yet
another active new station from Mozambique.

WAKE ISLAND. Jim, VK9NS, is signing WR1Z/KH9 on all HF bands. His
length of stay is expected to be for about another week.

ITU HEADQUARTERS. Andy, DL4OK, will be leaving Liechtenstein to end
his European tour at Geneva. Look for him signing 4U1ITU through
July 4.

SNAKE ISLAND, 4K5ZI. RB5FF and others will activate 4Z5ZI from July
5 thru 25. Activity will be all bands/modes. DXCC country status
for this one has not yet been determined. QSL via DF8BK.

IOTA NEWS. The Island Hoppers Group will sign EJ0SI from the Sultee
Islands, EU-103, between July 9 and 14. QSL via EI6FR.
```

FIJI/WESTERN KIRIBATI. The JARL Kyoto ARC plans to be active on RTTY from 3D2 on August 7, move on to T30 from the 8th through 13th, and then return to 3D2 for August 14 and 15. QSL via JA3OIN.

DESECHEO. The same group that activated Navassa in January plans a big effort for KP5 in December. Operators will include N0TG, WA4DAN, KW2P, AA4VK and W0RJU.

WARC BAND AND VHF PACKETCLUSTER SPOTS.

30 meter activity includes OX/DK2OY, LZ1XL, S79EC, KG4DD, KP4DDB, ZA1J, IT9ORA, SV0DV/9, HB0/Y33VL, OD5/SP1MHV, 3B8CF, LU4KV, 4N2AJ, HP1CWB, ZA1TAC, PY2EX, HR/F2JD, K1EFI/VP9, HH2PK, FK8GJ, VK3XU and 9Y4NW.

On 17 meters, look for HB0/Y33VL, S79EC, KH6AQ, YL2PQ, FK8GJ, ZP6CW, XQ0YAF, HC5AI, LU7EAR, WR1Z/KH9, ZL2BO, VK8KE, HR5/F2JD, OD5/SP7LSE, CE3ZW, UA9TS, 5T5CJ, V44KAQ, ZF2AH, ZD8EB, WJ3U/6Y5, PJ9EE, D2/F6BLQ, VK7AK, VO2GUY, 6Y5/WJ3U, KH6HH, KG6TA, P4/PA3ECI, VP9HE, NH6XK, HK5LEX, TG9AGR, 7Z2AB and 9H3KE.

Even with low solar flux, ZLs have been worked this past week on 12 meters.

Six meters is hot. Look for KD4KVU in EM67, N8NQS/VE3 from EN87 and EN88, and finally XJ3S in FN03.

Tropo conditions have helped folks work N8NQS/VE3 and KW0A on two meters.

RELATIVELY RARE RTTY REPORTS.
5N3ZIP 21082/0710

UO5OIN 14088/2125
VP8CBK 21090/1520
VR6BX 14084/1523

ODDS AND ENDS. FR5ZU/T QSLs are arriving for the March 92 DXpedition. JA2NQG reports his March 92 Maldive operation netted 2321 contacts, mostly CW, including some on 160 and 6 meters. He will return to Lord Howe Island in mid-September. For contacts made after Jaunary 1, 1992 with HS0AIT, QSL via W3HCW.

QSLS in the mail include 6Y5/K2BS from 1/91, WN4KNN/ZP5 from 11/91, A61AC from 12/91 and the 8Q7CW and FO0CI operations from 3/92.

D2ACA CARDS. QSL manager Toly, UT3UY, states 90 percent of the cards for North America have been mailed, with the remainder to be

sent within a couple of weeks. Ditto cards for Asia. However, due to postal problems in the Ukraine, all cards bound for Europe are just getting mailed. QSL D2ACA only via LZ2DF or UT3UY.
NNNN

Good Luck on DX de KB8NW/OBS

WD-40 is good at freeing things up--which it's designed to do--but is not
really a good lubricant, nor (I believe) is it designed to be.

Now I get it. Our local cable TV folks were running around looking for leaks, the other day. There must have been a faulty sprinkler and those wonderful guys were out to fix it before it ruined somebody's gear.
BTW, they should really use ionizing detectors on the bands as part of the alarm system. This way it will be possible to detect a fire before it gets really started.

138. Ten-Tec OMNI VI Update

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-03 12:35:12 UTC
From: MOSIER@iris.uncg.EDU
Message-ID: <01GLXOX7BQ1Q96VP5D@IRIS.uncg.edu>
Source record: 287970

There were several bugs in the OMNI VI, but Ten-Tec has apparently ironed them all out. The key click problem I had was indeed severe, but it turned out to be a software problem in the internal curtis keyer emulation. The CW waveform was quite good with an external keyer.
On some heavy Field Day CW operating, I noticed a problem with the sidetone volume, in which use of the spotting switch caused a permanent volume reduction in the sidetone until it was reset. I finally figured out how it was working at the end of Field Day and called Ten-Tec Monday morning. Paul said, "Gosh. Let me see if I can stop the new PROM burning while we look into this." He called back and said, yep, it was another bug, and they would get it into the new chips. (They had already found another bug with the spotting switch, he said.) I also had a problem on FM -- the meter pegged on all functions in transmit. Ten-Tec said not to worry, I couldn't hurt the rig, and gave me some procedures to localize the problem. Nothing was conclusive, so they sent me a new FM board to try when they sent out the new logic PROM. All of the bugs I had found went away with the new PROM, plus several that I didn't know I had, according to Ten-Tec. The new board took care of the FM problem, too. However, I don't really like the internal keyer weighting. I think Ten-Tec could do better on that. I'm operating with my CMOS Super Keyer II (Nov 90 QST) and I'll probably just stick with that. I really like that better than any keyer I've ever used.

The rig performed gloriously on Field Day. I can't handle much more than 25 wpm in a contest but we had a couple of 40 wpm ops and they loved it, too. It certainly is disconcerting to have a signal booming in, easy S9 copy, and you look over at your S-meter and it says S3. Having to tell someone his signal is only S3 after you've said BIG SIG, OM, EZ CPY could really give you a credibility problem.

Incidentally, the new PROM and FM board came with a postage paid return bag for the old ones. Talk about easy!

I tend to agree with those who caution against carburator cleaner and similar stuff. When working as a technician at our Audio Visual Department, we had some type cleaner,meant to disolve the ink on printing presses. The can said it contained 111TCE. That was really nasty stuff. It usually took paint off metal pannels right down to the shiny metal, turned plastic parts into slick, then gooy messes, and absorbed into the skin like DMSO. It sure cut grease, but I'm not sure it was worth the cost to plastic parts or human bodies.
Be careful about what you do with tuner cleaner, also. Some of those products have very fine abrasive for grinding the crud off turret contacts. On some tuners, it will work wonders. On others, like the old gold-plated tuners found in certain televisions, it will knock the gold off and you will have a worse problem than ever. If you use it on a pot, the grit will scower the carbon element right off.

>Steve Kuo, N8OPH, sdkuo@argo.acs.oakland.edu

Unfortunately, you're out of luck........

The civilian aircraft will use the normal tower frequency for the air show. However, most military aircraft are unable to receive those bands. This is to keep the aircraft as light as possible to carry more payload and to aid in manuverability (sp?). It's been my experience (my last job was at the FAA) that a portable military radio will be in the tower. I've even seen them controlled via telephone to the local military base, then the military controller will issue instructions.

To answer your next question, I don't remember what frequencies the military uses in this area. It's been seven years since I had to use a military radio.

> made in English.
^^^^^^^^ Surely not?
I do not see how the FCC can require a particular language be used for voice
IDing. What about people who do not speak English? Would I get a notice
of violation if i were to ID in Welsh, Hindi, Esperanto?
Are accents allowed? :-)

143. Transmit problem with Alinco DJ-580

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-03 17:38:41 UTC
From: jbs@rti.rti.org
Message-ID: <1992Jul3.173841.17216@rti.rti.org>
Source record: 287964

I was checking out a j-pole last night with a cross-needle
meter and noticed after changing batteries that there was
no output power registering when I PTT'd. I PTT'd several more
times and noticed that though the HT's signal strength meter was
giving its usual reading for transmit, the "ON AIR" block was
flashing. A few more pushes of PTT and suddenly "ON AIR" was
steady and the external meter was showing the usual output power.
Later, I switched to another battery pack, and shortly thereafter
the same thing happened again.
I've not had any indications that this has happened when I was
in communication with another ham.
Anybody run into this situation? Any clues or theories?

Thanks in advance...

-joe

The following piece of mail/news/debate is being posted for Mike KF6PU.
Responses to Mike, KF6PU may be sent to: jangus@sklyd.sr.com
I will will handle with asbestos gloves and handle accordingly.

> Date: Thu, 2 Jul 92 14:19:49 PST
> From: "Mike Hooper" <kf6pu@kf6pu2.ampr.org>
> Message-ID: <258.kf6pu@kf6pu2.ampr.org>
> Subject: CW Geezers
> Comments: Mail may also be sent to kf6pu@wa6fwi.ampr.org

I have been reading the exchange of comments inspired by your
"gasping geezers" comment. I am inclined to agree with you that
many Hams and especially the ARRL overemphasize the important
of CW to the neglect of other, more important, things. The
present requirements for an Extra Class license tell it all.
They made more sense in the fifties than now. I suppose the way
we know that Phil is a pioneer in advancing the "Radio Art" is
because his call is evidence of his CW proficiency.

Ham radio is stuck in the past. When DXCC is touted so highly
that members are admitted to the so-called "Honor Roll".
When the dream of most Hams is to have a 70 ft Tower, giant skyhook,
and an amplifier that can loaf at 1500 watts output so that they
can be the first on the block to exchange a signal report with the
latest new DXCC country the future of the Amateur Radio Service is
in doubt. When a two meter rig can pass as "digital ready" because
a pre-wired cable is included we are in trouble.

I don't begrudge a fellow Ham who wants to do CW just as I
don't have any problem with someone who wants to drive a Vauxhall.
I just get a bit more than angry when the interests I associate
myself with are considered tangential by the amateur community and
blasting a hole through the ether on HF is considered the sin quo non
of Amateur Radio. Just count the scant few pages of obsolete articles
in the latest edition of the ARRL Handbook ! Gee, I must be a heretic
because I don't have a collection of 811A's ready for the
next QST project.

The future of Amateur Radio is treated like a mere footnote in
most discourse. CW beacons on Ham Birds....when will the myopia end.

From: jangus@skyld.UUCP
Message-ID: <710188795snx@skyld.UUCP>
Source record: 287833

It is time for me to add my $22 worth.

I have a Icom IC-761, it came with everything I needed except the for a hand key and the optional narrow CW filter (an internal CW keyer WAS included). The IC-735 came with everything I needed except for a hand key, narrow CW filter and the internal keyer assembly. In both cases a microphone was part of the package and a 1/4 phone plug to connect a key (or paddles) was included. > My friend's Kenwood TS-790 and TS-850 were shipped in the same condition.

Rewind a bit, Julian Macassey mentioned that J-38 keys sell for $20 plus and a cheap Microphone sells for $2. Immediately all the CW (read that anti morris defamation league) defenders go berserk. What happened? It seems to me that people can't or won't see the humor in things.

From the above, I've spent over $3500 with ICOM and and I can operate SSB, AM or FM right out of the package. However, to work CW, I must spend some additional money. Unless of course, I just happen to have a hand key or keyer available. Why did I have to pay for a microphone as well? Didn't I just happen > to have a microphone as well? Or do they figure I can handle soldering a 1/4" stereo plug, but that an 8 pin microphone connector might be a bit much for me? > If I want to fully enjoy the capabilities of my rig, I have to buy the additional CW filter as well.

The message I get from the manufacturers is mixed.

The message I get from the ones that get themselves called "Geezers" is pretty obvious. They can't or won't adapt to changes in the world around them. By the way, according to my desktop dictionary, geezer is defined as a slang term for an eccentric man. Amateur radio is a wide spectrum of activities and modes. To close your mind is to lose sight of the wonders of change.

[optional background information] I've been licensed for over 20 years. I currently hold an advanced license (WA6FWI). I own and operate all three of the Vibroplex model keys. Original (bug), Electronic Bug, and Iambic (paddles). > I am active on SSB, CW, RTTY, Amtor, Packet and support considerable amounts of hardware for Packet Networking. I've been a member of the ARRL on and off for the past 20 years, and still support them although I don't always agree with them.

It's so compatible it will run DOS viruses, which can be a problem.

Still, Soft PC costs more than buying a slow 286 machine with an EGA
monitor, which is what it emulates. A VGA version is available for Sparc
machines, but not yet for Macs.

From: johnf@scd.hp.com
Message-ID: <Bqtvxq.73M@scd.hp.com>
Source record: 287969

(I tried to send the following to jbs and the mail bounced so here is my message)

Hi,

I looked in my online manual for all occurences of ON AIR and none of them mentioned what the flashing means.

I have however seen it on my rig also. I would suggest that you look at the decimal point between the 100KHZ and 10KHZ number and see if it too is flashing. According to the documentation this means that the PLL is out of lock. This flashing ON AIR may be the transmit equivalent.

Cross-posted to: rec.radio.amateur.misc,rec.ham-radio

OH6DD, OH2BC, OH1ZAA, UW1AE and UW3AX will activate Vyborg UA1 on July 5-10. Operation is postponed by two days from the original plan. Operation will take place from a hotel which is one of the highest buildings in Vyborg. Operation frequencies are 50.135, 50.105, 50.120, 50.155. Callsign is UX1A, grid KP40. Set-up consists of FT-650 + 5 el yagi. QSL via OH2BC.

Heading for UA1 in about 30 hours from now. CU in the pile-ups.

Well, it is the law. To get an FCC license in the first place, you have to take the test in English. Even someone who claims to read and write but not speak English ought to be able to learn to cough up his callsign in that language. Personally, what I find difficult is remembering to make the switch at the end of the exchange. It just doesn't flow very naturally. After being a ham for even a short time, identifying becomes second nature to most (and there are sooooo many that ID in excess). But switching languages to ID always seems a tad awkward. Besides, it appears (from what one hears on the air) that most administrations don't require ID to be in the official language (or the rule just goes unheeded, or it allows English as a legal option) and so if the guy on the other end doesn't speak English at all he surely must wonder what that funny growl at the end of your transmission was.

154. Satellite of the Month

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-03 23:45:11 UTC
From: wats@scicom.AlphaCDC.COM
Message-ID: <24224@scicom.AlphaCDC.COM>
Source record: 287848
Cross-posted to: sci.astro,sci.space,rec.radio.amateur.misc

This is for June. Sorry it's late. My monitor went out.

Earth Satellite USA-6 (NORAD #15423, COSPAR 1984-122A) was launched
from Vandenberg Air Force Base on 1984 Dec 4 with a Titan 34D launch
vehicle. This satellite is in an orbit inclined to the earth's
equator by 97.8 degrees. It makes one revolution every 96.6 minutes
and comes to within 556 km of the earth's surface and is most distant
at 713 km. It is roughly cylindrical with a 3.0 m diameter and length
of 15.0 m--similar in size and shape to the Hubble Space Telescope.
It is thought to be a Keyhole 11 optical surveillance satellite and
is designated KH 11-6 in Ted Molczan's list of 650+ two-line elements.

KH 11-6 is in what is called a "sun-synchronous" orbit. Such an orbit's
nodes (intersections of the orbit plane with the earth's equatorial
plane) precess, due to the earth's equatorial bulge, at the same rate
as the earth's revolution about the sun. This causes the satellite to
pass over a place on the earth's surface at approximately the same
local time at that place (a favorable situation for an earth's
resources or surveillance mission). In this orbit it can be seen only
during the summer when the sun's rays shine over the pole. In the north
hemisphere we are now well into summer and KH 11-6 will be visible
for the next few months. It can be seen around 10:30 pm +/- 30 min
(your daylight savings time zone) traveling from SSE to NNW on its
way to the other side of the earth where it is 10:30 am (or so) local
time.

I have observed KH11-6 from Denver 7 times the last three summers
mainly at magnitude +2 with little variation in visual magnitude
from pass to pass.

KH 11-6 15.0 3.0 0.0 4.6

I'm getting interested in building some radio equipment and need copies
of Motorola, Signetics and National Semiconductor databooks. Can anyone
recommend good (preferably free) sources for these databooks?

from the recent DX Bulletin posted here:

>>QSLS in the mail include 6Y5/K2BS from 1/91, WN4KNN/ZP5 from 11/91,
^^^^^^^^^^^^^^^^^^^^^

I leap to defend the honor of netperson Trey WN4KKN and his fine
QSL manager, netperson me. If someone is only now getting their
WN4KKN/ZP5 cards, it is because (a) they only just sent them to me,
or (b) they sent them to the wrong place, or (c) their mail delivery
needs some improvement. Cards for Trey's Nov 91 operation were
answered by return mail, and several fine netpersons can attest to
receiving them in early Dec 91.

The QSL route is given in many places, it is via me. I can also
confirm ZP0Y cards for Nov 91 CQWW-cw, when Trey was operating.
I also have the logs for Trey's operations in Nov 90 (same two calls
as above) and can respond to cards for those in a matter of minutes.

Why bother speaking the ID? In the old rtty days, we ID'd in Morse.
A little IC keyer chip with your call in firmware (or hardwired)
should meet all legal requirements; giving your call in MCW with
the push of a button. I have one of these I purchased 15 years ago
for beacon use. They must be available somewhere.

>
>Will going to a larger battery or battery pack give me increased power output
>or merely more operating time?

I have a friend who have the ht. I remember hearing from him that
the maximum power for the ix-2at is less than 1 (ONE) watt (don't remember
exactly how much). Using 2 high voltage will cause DAMAGE to the ht.
Be cautious, and read the manu. Hope someone will give more ditailed
info here.

>I have a need for more output and am looking for a solution.

I own a IC-2GAT, with 7W on high and 1W on low power with 13V bt.
Great ht, and gives you highest power allowed. I greatly recommand it.

In <1992Jul1.174130.29567@constellation.ecn.uoknor.edu> jahern@geohub.gcn.uoknor.edu (Jud Ahern) writes:

>On my way to work today (7/1/92), I heard CBS radio news mention that
>the shuttle astronauts talked with school children via ham radio.
>They also said that video of the astronauts' families was sent up
>to them, but did not say whether it was ATV or not. Anybody know?

A Marietta Ga club (Big Shanty Rptr Group) I belong to has been legally retransmitting nasa select on ATV for the last 4 missions, and audio for much longer.

The school here in Marietta is sponsored by another local (Kennahoochie ARC) as a "NASA partner" (there is some official name for it).

The Kennahoochie and BSRG clubs worked together with BSRG providing audio/video downlink via ATV retransmission of NASA select.

The uplink went through amateur radio, but may have used a NASA uplink to make the big hop.

The two way was a big success, and though it was not a "direct" shuttle contact, the kids had a blast, learned alot, and Amateur Radio got some positive publicity.

The BSRG equipment includes a sat dish at their rptr site, CATV commercial exciter, and a healty 100% duty cycle PA. All vestigial sideband filtered, and is a clean neighbor. (56k packet operation very close by are uneffected.)

The ATV rcv equipment was an external antenna (TV) preamped, pushed through CATV distribution amps so several TV's could display it. I think most of the school watched, as did local TV stations.

The Kennahoochie equipment was either a Kenwood 430/440 or the all mode two meter rig in the same package. (I suspect the later.)

The original school equipment was stolen recently, and the "mission" was in danger. Luckily a local ham(s) donated a new one.

I can get further details if needed, or can provide a contact to the main ATV person (Ralph Fowler N4NEQ).

>Nice to see some good publicity, especially on the very brief "six
>minute trip around the world" as CBS likes to call their broadcast!

It was neat watching the kids ask their questions, and saying "over".

The ATV quality has gone way up, and many schools take advantage of it.
(video and two meter audio)

Anyway, we need to do more of this type of thing.

164. Yaesu FT5200 MOD ??

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-04 08:16:20 UTC
From: koku@kuhub.cc.ukans.edu
Message-ID: <1992Jul4.031620.41268@kuhub.cc.ukans.edu>
Source record: 287846

Can anyone help me with FT5200 Yaesu Mod information.

Is the MOD for out of band xmit like the ft4700's ?

I have noted that jumper 2 and 7 have surface mount resistors.

any help will do.

73' Bill N1HWC

=========
SpaceNews
=========

MONDAY JULY 6, 1992

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* SAREX NEWS *
==============
Roy Neal, K6DUE, Chairman of the SAREX Working Group reports that
all unscheduled contacts with the STS-50 SAREX experiment are now
taking place on a frequency of 144.450 MHz simplex. WB6LLO reported
receiving slow-scan television (SSTV) images from orbiter Columbia
on July 2nd. Reception was "closed circuit" on a morning pass over
San Diego, California. The image showed the shuttle's tail and a
cloudy Earth below in the background. Dick Richards has had some
limited success in contacting hams on the Earth below.

Stay tuned to 144.450 MHz for more video, packet, and voice transmissions
from STS-50 and the space shuttle Columbia.

* MIR NEWS *
============
The Man and His World Exhibition has opened in the Tel-Aviv fairgrounds
and the main attraction is the Russian Space Pavillion, where for the first
time outside of the ex-USSR a full size replica of MIR is on display with
3 cosmonauts on hand. The following bulletin from 4X4LF came out a few
weeks ago:

A 14-Metre long module from the space station MIR will be the main feature
of the Russian space exhibit at the "Man and His World" exhibition, opening
in Tel-Aviv next month. In addition to this module, several of which are
connected together to form the space station, other exhibits will demonstrate
all aspects of life in space. "Several Russian Cosmonauts will be at the
exhibit, each one for a period of about 10 days. Among them will be Sergei
Krikaylev, U5MIR, who was very active on Amateur Radio (both voice and packet)
during his 10 month sojourn on MIR (May '91 to March '92).

The IARC (Israel Amateur Radio Club) has invited Sergei Samburov, RV3DR,
to operate a ham station from the exhibit, for the purpose of contacting MIR
```

during it's passes over Israel. We will also discuss Amateur Radio operations during the planned flight of an Israeli Cosmonaut on MIR. Sergei is the grandson of Konstantin Tsiolkovsky, who formulated the theoretical foundations of space travel at the turn of the century. He is employed by NPO "Energiya", the Russian Space Agency, and is in charge of the Amateur Radio program and Cosmonaut training.

The exhibit will be in pavilion 27 at the Tel-Aviv Fair Grounds. The opening date for groups is June 8, and for the general public June 18. The fair will continue until August 31.

[Info via Ron, 4X1MK]

* FO-20 NEWS *
==============
Mode JA analog transponder operation is expected to occur according to the following schedule:

08-Jul-92 02:40 UTC -to- 09-Jul-92 01:10 UTC
15-Jul-92 01:15 UTC -to- 16-Jul-92 01:35 UTC
22-Jul-92 01:40 UTC -to- 23-Jul-92 01:55 UTC

[Info via Kazu Sakamoto, JJ1WTK]

* LUSAT NEWS *
==============
At last check, LUSAT-OSCAR-19 was transmitting with reduced power output. This may cause difficulty in connecting to the satellite (LUSAT-1). The CW beacon has been active, and is currently much stronger than the packet downlink beacon.

* FEEDBACK/INPUT WELCOMED *

I don't own one (thogh I'd probably recommend one after listening to several and hearing few complaints), but I have one beef.

A fellow in the local store asked me to test the one he had, upon seeing the Kenwood HT on my belt, and I decided to give it a go. The programming is, of course, nothing like the Kenwood, but that's expected.

What I couldn't believe was that I ran into trouble trying to wade through the instructions on a piece of equipment sold by the best-known electronics retailer in the country! The darned thing read like a government regulation, apparently trying to save paper. Things like, "Do what you did back on page 3, then do this." I couldn't believe how cryptic the instructions were.

I also couldn't make sense of the abbreviations associated with the buttons. Some looked alike, with the only difference being a < or a >, I believe. This could be my Kenwood bias showing, though.

I ended the episode in a cold sweat of embarassment, explaining that I had to go somewhere, and that I didn't have time to study the instructions at that time.

As for another part of this thread, concerning people at the RS store kerchunking your repeater, I'm sure it's nothing compared with what goes on during a Hamfest! Not one dealer has ever asked to see my license, either, despite the fact that, as a new licensee, I know just enough about the hobby to get into lots of conversational hot water. Give the Shack a break. I probably wouldn't have gotten my license, yet, except for the easy availablility of study materials "right next door."

169. questions about Heathkit 201 amp

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-04 16:20:41 UTC
From: dale@sequent.com
Message-ID: <1992Jul4.162041.25192@sequent.com>
Source record: 287856

I have a few questions about a Heathkit 201 amplifier. I am considering purchasing one of these. I have spoken to a fellow by phone about this. The unit is evidently from an estate sale, the seller doesn't know much about it. I'm told it covers 10 to 80 meters and puts out 1 KW. I was also told that this uses two tubes in the final, tubes were 573s. Is this information correct? Are these tubes still available and how much do they cost? Is this a good rig and what would typical cost be? Asking price for this one is $300. A friend and I are interested in powering from 110 volts from a generator. Information on this amp would be appreciated.

Thanks, Dale.

> bandwidth of the duplexer, etc). Thanks in advance.

Well, the Novatel Amateur Radio Club in Calgary had some old 2881 sets
that were modified to 902 amateur band. There were mods for voice/data
simplex and duplex. Yes, software was required to be specifically made
for it ... it uses an 8085 ... it runs at 9600 with no tnc required as
it has a kiss interface on the code already (so just plug and play with
nos hi hi). It took about 4 hours to modify the cell andthere were
problems along the way but the guys at Novatel did a good job in getting
quite a few of them going if we ran into problems.
I bought one but was leaving calgary so i sold mine to another ham.

I live in a neighbourhood populated by Russian immigrants. This certainly adds colour, but has some drawbacks. The major drawback is they all seem to be enamoured by light dimmers. "Look Boris, I turn it this way and it looks like communist lighting, now I turn it the other way and now capitialist bright lighting."

This alas plays havoc with my MW and HF radio reception.

Does anyone have a circuit or proceedure for making these things quiet? I have tried capacitors in the past without much success.

172. STS-50 packet robot worked

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-04 16:48:12 UTC
From: johns@uhunix.uhcc.Hawaii.Edu
Message-ID: <1992Jul4.164812.8412@news.Hawaii.Edu>
Source record: 287854

Yay! I aced out the LID(s) who were calling STS-50 on voice this morning.
I have told them over and over that it is useless, even harmful, to
call before you hear the shuttle. If it is in range but you don't hear it,
then you are likely to QRM their QSOs! If they are out of range, then
you are wasting your own time. They _DO_ call CQ when they are on voice,
and the packet robot sends out QST beacons.

This time the fellow I heard was unable to make a contact because
he didn't bother finding out who was sending packet. It was W5RRR-1 !
(Yes, he has the capability of running voice and packet simultaneously.
But in any case, it's wrong to transmit on top of the DX station!
If you can't hear the DX, don't transmit!)

Here's what I managed to glean:

callsign/QSO#

N6DBF/1 WD6GYU/2 N6PSU/4 K6ATP/21 W5GEL/27
KJ9U/29 *** on the first call! wow! ***

Station equipment: FT-727RA handheld, 30 watt "brick" with preamp,
110 feet RG-8X, and 1/2 wave J-pole at 110 feet (roof of condo.)
QTH is Honolulu. Time was approximately 1530 UTC July 4.

Aloha and good luck to all!
John KJ9U / KH6

============================================================
| Automatic relayed from packet radio via |
| N8EMR's Ham BBS, 614-895-2553 |
============================================================

ZCZC AP35
QST DE W1AW
Propagation Forecast Bulletin 27 ARLP027
>From Tad Cook, KT7H, Seattle, WA
July 6, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To All Radio Amateurs

The possible shortwave fade on Field Day mentioned in ARLP026 did
not appear. The effects of a solar flare were delayed somewhat,
with the most disturbed conditions on June 30, when the Boulder A
index reached 46. The K index went only as high as 4 on Field Day
weekend, dropping frequently back to 2, an indication of stable
geomagnetic conditions and lower absorption.

But on June 29 at 0600 UTC the K index reached 7. It dropped back
between 3 and 4, and then up to 7 again at 0600 and 0900 UTC on
June 30. The flare mentioned in the last bulletin as possibly
affecting Field Day was the largest since February 27, 1992.

Over the week at the end of June there was more total solar activity
than there was in many recent months. Conditions could be active
again on July 5 and 6, and possibly again by mid-month. The solar
flux should reach a short term peak of about 135 around July 8, then
drop back to 115 around July 13, then up to 135 again July 18.

The rate of drop of the solar flux has slowed somewhat. The 90 day
solar flux average dropped 19 points during March, 21 points during
April, and 35 points during May, but only 17 points in June. This
is the leveling off in the drop in flux values mentioned in ARLP021.

10 and 15 meters remain chancy for long distance propagation. 17,
20 and 30 meters are the best bets. 20 meter daytime propagation is
not nearly as good as it was a few months back, with the best times
being local evening and early morning.

Sunspot Numbers from June 25 through July 1 were 87, 84, 56, 98,
119, 108 and 117, with a mean of 95.6. 10.7 cm solar flux for the
same period was 122.4, 111.6, 109.5, 108.3, 110.7, 122.9 and 129.8,
with a mean of 116.5.

>modes.
>
>Any trying SSB on 10 GHz, for instance?
In Europe there are many stations active on 10GHz SSB.
The most of the publications are in DUBUS. This is a HAM publication
(~4 times a year) from a small ham group in Berlin (DL). All tekst is
in Englisch and German! About the half are mostly new designs for
UHF- , SHF including printed circuit layout. The other half are
UHF, SHF and moonbounce DX raports and scoures.

There a few other places you can find a lot of information:
RSGB books. The RSGB promoting a 10Gc SSB RX, TX. You can order the
printed circuits and other difficult to get parts.
SSB elctronic, lineair tranverters to the most SHF ham bands.

177. Cushcraft R5 problem

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-04 17:39:18 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <1992Jul4.173918.22216@news.larc.nasa.gov>
Source record: 287858

Recently, I've noticed problems when trying to tune my Cushcraft R5
antenna. When I have my TS-850S (with auto-tune enabled) connected
and am running a CW carrier, I notice that the SWR will suddenly jump,
from, say, 1:1 to 2:1 and then immediately return to normal. I've
disconnected other intermediate equipment and still notice this effect
with the antenna line connected directly to the rig. Interestingly, it
appears to be more prevalent following rainy weather.
Has anyone else noticed this effect? I've heard of problems with
water getting into the impediance matching box of the R5. Might
this cause such a problem?
Thanks for any suggestions. Please respond by e-mail as I will
be out of town next week and won't have a chance to check the newsgroup
during that period.

I can't believe that this particular stipulation has
continued to be a part of our regulations.

The US does nopt have an official language and there are even
places under the jurisdiction of the FCC where english isn't
spoken at all in normal conversation.

Looks like another candidate for a re-write. I always felt it was
proper to identify in the language I was currently speaking although
I would usually ID in english as well.

Source record: 287865
Cross-posted to: rec.radio.amateur.misc,sci.space,sci.space.shuttle

[Apologies for the delay in posting; I just got this this morning. -K5ZC]

SAREX OPERATIONAL UPDATE
JULY 1, 1992 22:44 UTC
JOHNSON SPACE CENTER
HOUSTON, TX

SAREX activities aboard the Space Shuttle Columbia continue to center around issues related to the performance of the SAREX antenna.

Flight crew members KB5SIW & KB5SIX have worked closely with ground controllers and SAREX operational personnel in an attempt to improve antenna performance. During orbit 89 the SAREX antenna was modified by KB5SIX according to an IFM (In Flight Maintenance Procedure) drawn up by antenna designers at the Johnson Space Center in Houston. Despite these changes, the antenna performance continues to be less than pre-flight analysis had expected. After reviewing all of the data collected and procedures attempted to this point, SAREX personnel have decided that on further adjustments or modifications will be made to the SAREX antenna system during the balance of this flight. As a result, frequencies available for SAREX operations have been severely limited.

Based upon current flight hardware performance coupled with a desire to conform as nearly as possible with world-wide band plans, SAREX operational personnel have been forced to make yet another frequency change to STS-50 operating frequencies. Effective from orbit number 101 (23:00 UTC July 1st), All SAREX OPERATIONS WILL TAKE PLACE ON 144.450 MHz SIMPLEX FOR THE BALANCE OF THE STS-50 MISSION.

It should be pointed out that consistent with SAREX mission objectives a number of special contacts between the crew aboard Columbia involving school students and youth groups around the world were planned pre-flight. Due to the frequency changes being announced in this bulletin it will be necessary to these contacts to take place on the open contact frequency of 144.450 MHz simplex.

SAREX asks for the cooperation of all radio amateurs in allowing the crew members aboard Columbia to facilitate these specially planned contacts. Operators attempting to contact the Columbia astronauts are requested to be mindful

of these special contacts and yield to these groups when
either KB5SIW or KB5SIX indicate that they are conducting
such contacts during the balance of the mission.

73 and Good Luck From The SAREX Team

RTTY DX Notes 3 July
RTTY DX Notes for week ending 3 July, 1992 (BID RTDX0703)

If this week's DX Notes appear a little scarce, I must apologize.
I can only report what information I receive, and this week there has
been very little activity.

Conditions of course were not the best for most of the week, and that
did not help either. So all that I can say is that we are not up to
our usual standards. For next week please send your report and
information again to Syd, VK2SG @ VK2AGE.NSW.AUS.OC, as he will return
to produce the notes. Hopefully better news from Australia.

Our thanks this week go to TG9VT, ZL2AAV, I5ICY, I5IGQ, WB2CJL, W2JGR
And The Twin-Cities DX Packet Cluster Network. We thank you all chaps
for the news and DX in your areas. It all helps a lot.

Notes of Interest.

G3NOM, Ray, is scheduled to visit northwest Kampuchea between July 26
and August 2nd. Callsign will be XU1NOM. Operation includes all HF
and WARC bands. All modes, packet/RTTY/AMTOR.

Jim Smith, who is now signing KH9/WR1Z is supposed to stay there til
July 10, but no report yet on RTTY.

North Korean project is still in progress and the representatives have
just returned, but there is some delay on the expected operation.
More details later.

ARRL DXAC announced that there wasn't sufficient evidence to consider
proposals for Ceuta and Melilla, South Sudan and Spratly.

Don't forget that all information for these DX Notes for next week
should go again to Syd, VK2SG. Thank you.

WF6R, K6GZA, and K6KLY are frequently on 10 GHz. SSB during the
applicable contests. They have worked some 50 mile paths.
They use a microwave mixer to upconvert from a lower frequency.
Microwave sources known as "bricks" are used as the LO. These
are widely available surplus for reasonable prices. It's actually
surprisingly easy to do.

You need to buy a surplus "brick" type microwave source.
These have been made since the 60's by many different
companies such as California Microwave for point to point
microwave radio. They are very similar in design regardless of vendor.

They have a crystal oscillator near 100 MHz. This samples a
cavity tuned power oscillator running between 1 and 2 GHz.
The power oscillator is hence phase locked to a harmonic of
the xtal. The power oscillator drives a step-recovery diode
multiplier which is filtered with a comb-line or interdigitated
filter to select just one harmonic. You can get up to 20 dBm.
out of them. You can change frequency by changing crystals and
retuning the cavity oscillator.

Even now, these things are almost state of the air in phase noise.
Only a multiplied SAW oscillator would be better.

STS-50 SAREX FREQUENCY CHANGE

HR AMSAT NEWS SERVICE BULLETIN 186.01 FROM AMSAT HQ
SILVER SPRING, MD JULY 4, 1992 BID: $ANS-186.01
TO ALL RADIO AMATEURS BT

STS-50 SAREX Frequency Change Necessary Because Of Antenna Problems

SAREX activities aboard the Space Shuttle Columbia continue to center around issues related to the performance of the SAREX antenna.

Flight crew members KB5SIW & KB5SIX have worked closely with ground controllers and SAREX operational personnel in an attempt to improve antenna performance. During Orbit 89 the SAREX antenna was modified by KB5SIX according to an IFM (In Flight Maintenance Procedure) drawn up by antenna designers at the Johnson Space Center in Houston. Despite these changes, the antenna performance continues to be less than pre-flight analysis had expected. After reviewing all of the data collected and procedures attempted to this point, SAREX personnel have decided that on further adjustments or modifications will be made to the SAREX antenna system during the balance of this flight. As a result, frequencies available for SAREX operations have been severely limited.

Based upon current flight hardware performance coupled with a desire to conform as nearly as possible with world-wide band plans, SAREX operational personnel have been forced to make yet another frequency change to STS-50 operating frequencies. Effective from Orbit 101 (23:00 UTC July 1st), All SAREX OPERATIONS WILL TAKE PLACE ON 144.450 MHz SIMPLEX FOR THE BALANCE OF THE STS-50 MISSION.

It should be pointed out that consistent with SAREX mission objectives a number of special contacts between the crew aboard Columbia involving school students and youth groups around the world were planned pre-flight. Due to the frequency changes being announced in this bulletin it will be necessary to these contacts to take place on the open contact frequency of 144.450 MHz simplex.

SAREX asks for the cooperation of all radio amateurs in allowing the crew members aboard Columbia to facilitate these specially planned contacts. Operators attempting to contact the Columbia astronauts are requested to be mindful of these special contacts and yield to these groups when either KB5SIW or KB5SIX indicate that they are conducting such contacts during the balance of the mission.

73 and Good Luck From The SAREX Team

W0SL Helps STS-50 Commander, KB5SIW, "Call Home"

On the morning of June 30, 1992 at 13:45 UTC, Mrs. Marge Richards of Florissant, Missouri was able to talk to her son, Dick Richards (KB5SIW) using the station of Roy Welch (W0SL). KB5SIW is the commander of the Space Shuttle Columbia during the current flight of STS-50.

The shuttle was passing over the Texas Gulf coast at the time of the QSO. W0SL and his team were fortunate to have a good pass even with only an 8 degree maximum elevation in St. Louis, MO area. The local NBC affiliate TV station, KSDK, carried the action on the noon news and again on the 6:00 pm news, local time. The CBS television affiliate, KMOV, carried an interview with Marge on the 10:00 pm news with sound recordings from the QSO.

There were also three local amateurs helping to man video cameras and the liaison telephone link to the Johnson Space Center in Houston. Thanks to Larry Roberts (W9MXC) and John Nell (N9FTA) for manning the cameras. Thanks to Dick Bowes (WB0VOE) for bringing Marge to my QTH and manning the telephone link with John Nickel (WD5EEV) and Doug Loughmiller (KO5I) at the JSC. Most of all, thanks to Marge and Dick for the fun.

[The AMSAT News Service (ANS) would like to thank Roy Welch (W0SL) for this ANS bulletin item.]

Local AMSAT Group Meeting At Goddard Space Flight Center (GSFC)

There will be a follow up meeting to the January 1992 gathering at the Intelsat HQ as hosted by Ken Nichols (KD3VK).

PLACE: NASA/GODDARD SPACE FLIGHT CENTER
BUILDING 3 AUDITORIUM
GREENBELT, MARYLAND

DATE: SUNDAY, JULY 12, 1992
2:00 - 5:00 P.M. EDT
Rain or Shine !!!

TALK-IN: W3ZM/R 146.835 MHz FM located at WA3NAN.

First timers are welcome. Pass the word to others, including on your local repeater net. Bring a friend!

Note: Pre-registration is required for those who did not register with Ken for the Jan 92 meeting. Come early enough to sign in at the GSFC Main Gate on Greenbelt Road (MD193). Bring legal picture ID to show during sign in. Main Gate House phone: 301-286-8661. To register, contact host, see below.

AGENDA (Tentative)

2:00-2:30 pm: Welcome, Introductions and Opening Remarks.

2:30-4:00 pm: Discuss results of January questionaire, direction
of local chapter, status of current OSCARs,
AMSAT Phase-3D Project, Gateways,
Beginner's Opportunities, the coming AMSAT-NA
Annual Meeting and Space Symposium, and other hot topics.

4:00-5:00 pm: Individual discussion groups.

For more information contact:

Pat Kilroy WD8LAQ
Packet: WD8LAQ @ WB3V.MD
Internet: wd8laq @ amsat.org
Work Phone: 301-731-8695

Extra Attraction: The NASA/GSFC Visitor Center will be open to the public 10:00am-4:00pm. This includes the Space Museum Hall of Satellites, Gift Shop and Picnic Area. Enter from Soil Conservation Road. VC Phone: 301-286-8981 and 286-6476.

Ham radio in space is becoming more exciting than ever. AMSAT members are encouraged to start a regional interest group in their area where none is already in place. A good place to start is on your local 2m repeater!

AO-13 OPERATIONS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 186.04 FROM AMSAT HQ
SILVER SPRING, MD JULY 4, 1992 BID: $ANS-186.04
TO ALL RADIO AMATEURS BT

AMSAT-NA AO-13 Operations Net Schedule

AMSAT Operations Nets are planned for the following times. Mode B nets are conducted on AO-13 on a downlink frequency of 145.950 MHz and Mode J/L on a downlink of 435.970 MHz.

Date UTC Mode Phs NCS Alt

11-Jul-92 2300 B 225 W5IU WA5ZIB
19-Jul-92 0000 B 164 WJ9F WA5ZIB
1-Aug-92 2000 B 168 VE2LVC W9ODI

Guest commentators are planned. Join the Net if you have questions. In the unlikely event that either the Net Control Station (NCS) or the alternate NCS does not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television On A0-13

The SSTV net will meet on a downlink frequency of 145.925 MHz, Mode B at MA 165, UTC Sundays. Also try Mode J, UTC Saturdays at MA 165, on a downlink frequency of 435.980 MHz. Try the various AMSAT Nets for scheduling at other times.

AO-21 STATUS FROM DB2OS

HR AMSAT NEWS SERVICE BULLETIN 186.05 FROM AMSAT HQ
SILVER SPRING, MD JULY 4, 1992 BID: $ANS-186.05
TO ALL RADIO AMATEURS BT

DB2OS Provides The Latest Status Of AO-21/RUDAK Operations

RUDAK has been operational with the "software" FM repeater (DSP) for nearly 2 weeks now. The FM-Mode is in continous operation at the present time and is not being interrupted by ranging or telemetry broadcasts.

Uplink 435.016 MHz --> Downlink 145.987 MHz

At times it has been noted that the receiver so sensitive that it is possible to work the FM Mode with only a 1 Watt H/T and a 20 element cross-yagi antenna! We have already identified illegal signals (INTRUDERS) on the uplink (exclusive satellite band) when the satellite is leaving Europe to the south, i.e. a packet radio link and possibly a commercial phone patch repeater.

If the receiver becomes desensitized as a result of the QRM mentioned above, about 10-15 dB MORE power is necessary to put a good signal through the transponder. There is still no complete explanation for this effect.

We hope that AO-21 RUDAK will remain on for awhile and we will continue the FM-Mode for the next 1-2 weeks, before some voice and other experiments will resume. There are no plans at the present time to use the RUDAK BBS Mailbox System. The BBS hardware (the same flown on AO-13) has been confirmed to be 100% functional, but our efforts are now concentrating on the new RTX-2000 Digital Signal Processing (DSP) hardware. The FM-Mode for example is completly done by software!

AMSAT OSCAR-21 is the first such Amateur Radio Satellite with DSP capabilities.

I am not sure what the original reguest was since my HD froze last
weedend, therefore I have been off the net and missed a lot but here's
my two cents.

Ramsey Electronics, which has been both slammed and praised on here
produces a Stereo FM Transmitter kit. I put one together a year ago
Christmas, in one evening, so I could pipe holiday music to all the
stereo's in the house and garage. It has proven to be very stable for
a cheap kit with relatively good fidelity. It takes line level
input, has a fixed antenna, and F connector for external antenna.

Ramsey is in many of the Ham and electronics mag's
(few that there are)

(Sorry for the bandwith but I need it to make the point.) C'mon guys
lets deal with one issue at a time. First the Radio Shack thing. I
use to have a career with RS a few years ago. I spent 7 1/2 years
with them and managed the top stores here in MPLS. RS DOES NOT TOLEATE
ILLEGAL ACTIONS DIRECTLY OR INDIRECTLY BY THEIR EMPLOYEE'S. This is
how you solve the problem!!!

Make sure you have some sort of documentation (ie. Dates and times that
you triangulated on the person and what they were doing, their name and
the store they work at.) If it is in the store that you witness it, then
note the time and date, the employee's name and title on his name tag,
what occurred (ie. non-Ham keyed/xmitted radio and gave it to non-ham
customer to do the same). If either the employee or customer is a Ham,
then you have a control-op situation and you have to allow RS the same
courtesy you would give to AES or any other legitimate retailer that sells

Ham radios.

Take your documentation and call or write the District Manger. Explain to him/her the situation and request that they respond to you in writing when the problem solved. This should solve the problem. If it doesn't, then send a letter to Bernie Appel, President Radio Shack with all the info and the action you've taken so far (I'll guaran-damn-tee that will solve the problem). You can probably send it e-mail to Bernie at Radio Shack.

Paul, Can you post the appropriate address??? Thanks!

DO NOT, DO NOT make a seen in the store!!!!! We have have enough bad PR between lids on 20m and the idiots or morons that think it is fun to jam the public service bands.

Wow! 5,000 years? Has Morris really been around for that long?
That's almost as long as the Christian Fundamentalists say we have had
an earth. Now I wonder if the eco-commies and Millenarians think we
will have Morris when it all ends.

The mind boggles.

I enjoy my HTX-202 very much. Before I bought it, I did do some price checks and such. I found that, for the money, the HTX-202 was the best value I could find.

A local amateur radio store was selling the HTX-202 for $213.00. I believe the regular price is $259.00. So it was an even better deal...

Many people have commented on the good sound quality. According to a repeater I use that has a frequency check, I am right on the money frequency wise.

Because I like to use some repeaters that are fairly far away from me, I bought a RF Concepts 2 in 30 out RF Amp. It works great with the radio.

Within a few weeks, I plan to hook up a TNC to the thing. I haven't heard any comments on how the HTX-202 does with packet, but I will soon find out :) (I'm going to barrow a TNC from a friend before I go out and buy one...)

CS> What I couldn't believe was that I ran into trouble trying to wade
CS> through the instructions on a piece of equipment sold by the best-known
CS> electronics retailer in the country! The darned thing read like

I agree! I had a lot of trouble as a new ham trying to figure out what things did. I was talking to a fellow HTX-202 owner, and we both had the same problem. When we both first got the radio, as new hams, we didn't know what a PTT was! I was frustrated. I looked all over the radio, and couldn't find a PTT button! The manual had said, for one of the options, to press the PTT switch to do something. I tried and tried, and I couldn'd find the darn PTT!

Obviously, now that I have been a ham for a while, I know it means Push To Talk. I got my radio before I got my license, and I just couldn't figure it out.

You would think that, somewhere in the manual, something would show what a PTT was. The PTT switch on the HTX-202 says "[M]".

Luckly, I was able to figure out most of the radio from trial and error. (That is how I figure out most things...however, manuals are useful sometimes* *Grin).

On the bright side, I am glad that Radio Shack made the HTX-202. It is a great radio. It works well, and puts out a great signal.

FOR IMMEDIATE RELEASE:

The 11th annual Fast Scan Television DX Contest will held from 0001 (your local time) on Monday morning August 24, 1992 until 2400 (your local time) on Sunday night, August 30, 1992. This event is scheduled during prime summertime UHF DX troppo and groundwave enhancement periods to achieve maximum coverage. The contest is open to both licensed amateurs to work two way contacts and those who want to monitor the activity with receive only stations. The purpose of this contest is to blow the dust off the idle gear, to work or watch as many different amateur fast scan television stations on UHF and above bands as possible, to renew old acquiescences, to meet new friends, and to have fun.

If you have been thinking of getting active on ATV for the first time or just getting started again now is a good time because during the contest activity will be much higher than normal. If you have been putting off building / buying a ATV downconverter or hooking your cable ready TV / VCR up to your
The 11th annul North American UHF FSTV DX Contest is sponsored by The Spec-Com Journal. The SCj is a bi-monthly publication dedicated to specialized communication modes that include Fast Scan Amateur Television, Slow Scan Television, WEFAX, Digital Modes of communications, Satellite Communication, Computers, Shortwave, and much more. We will be awarding prizes for several classifications this year including receive only for the most stations seen and the farthest distance received. For complete, free details of the contest and a log sheet please send a stamped, self addressed 8 1/2 X 11 envelope to The SCj, Post Office Box 1002, Dubuque, Iowa 52004-1002 today.

Please help us pass the word about this fun and interesting contest by printing the information in your newsletters, on your local bbs, and telling others about the event. Get your gear ready, get your buddies together, pass the word around! The 11th annual North American UHF FSTV DX Contest starts at 0001 (your local time) on August 14, 1992. All logs must be received no later than September 5, 1992 at The SPj

headquarters. We will print the results of the contest in
the September/October Spec-Com Journal and full operating
instructions and log sheets will be in the July/August issue
that is due to be mailed by mid July. Have fun and we
welcome all to participate. We also welcome photo
submissions of on-the-air results for publication with the
contest results

The real problem has nothing to do with whether any of the arguments are valid, or which point of whose is flawed. The troublesome thing is that when people continue to post contentless 'jab' posts, they hurt the newsgroup. Nobody wants to waste their time reading about fanaticism in this group, whether it be pro or anti CW. Especially about CW!! Everybody who has even though about ham radio (never mind liscenced or tried to licence) has mulled this CW issue over and over... and probably jumped the fence a few times (I continue to!)..

I think the biggest problem with this newsgroup is the increasing inability for all of us (me too) to tighten-up our "usefulness" filters before we hit that 'F' key.. (instead of the 'R' key or better yet the 'N' key!)....

203. vertical antenna ground radials question

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 05:43:06 UTC
From: mont@netcom.com
Message-ID: <0g5l9-c.mont@netcom.com>
Source record: 287787

I'm a relatively new ham and am installing a vertical 1/4 wave trap antenna about 30 feet up. I plan on installing 3 radials for each band. What I need to know is:

1. What size wire should I use?

2. Can I tie all the radials of each band to the same tie off or do I have to have a separate tie off for each radial of each band? Some designs I've seen use 4 wire tv rotor cable, with each wire cut for a different band.

Thanks in advance for your suggestions,
--

208. REALISTIC SCANNER PRO-9200

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 10:39:13 UTC
From: toms@hpcstmb.NETh.hp.COM
Message-ID: <9207061032.AA14202@hpcstmb.neth.hp.com>
Source record: 287791

Greetings,

I saw a message in INFO-HAMS with this Email destination
I have a question: Can you help me with the circuit diagram and/or the
service manual of the PRO-9200 scanner??
I have made several requests via 'INFO-HAMS' but it did not result in
a possible address to send my request for the doc. for this unit.
I hope that you can help me with this info, in my country (Holland) it
is not possible to get any information about this scanner.
I need the doc. to make a (hopefully small) modification to the squelch
circuit which will enable a greater capture range for freq. intervals
in the UHF range. These intervals are for this scanner 12.5 kHz which
prevents reception of frequencies in another interval like 20 kHz as
used in Holland.
I would appreciate it very much if you could respond to this question,
for this moment I don't know where to find the required schematics...

Thanks in advance,

Tom Staal PA2TSL (toms@hpsctma.neth.hp.com)

Well, I couldn't resist throwing a little more gasoline on the fire.

I went to our local hamfest yesterday in Wilkes-Barre, PA. I saw at least one enterprising individual with a beat-up, scratched, old J-38 for sale. Yep, you guessed it. $40!!! Maybe I should dig out that box of old radio junk from my Army days. Might be gold in there somewhere!

All the best.

From: cmeli%jaguar@panther.UUCP
Message-ID: <9207012005.AA14442@jaguar.malta.edu>
Source record: 287794

I would like to enquire about software for amateur radio & packet radio
BBS's which you have in your archives.
Could you send me a selection of such utilities and software via Internet
e-mail. Presently the University of Malta is not on Internet but via a node
at Genoa(Italy) we can receive & send mail.
(send to cmeli%panther@carla.dist.unige.it)
I think you will have to use UUENCODE to encode the programs.
Thanks!

211. Identifying your FCC-licensed Amateur Radio Station

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 12:06:06 UTC
From: bjahnke@arrl.org
Message-ID: <235@arrl.org>
Source record: 287728
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

FCC Rules Section 97.119(b)(2) specifies how an FCC-licensed Amateur Radio Station is to identify using a phone emission.

Specifically, the rule states:

"(2) By a phone emission in the English language. Use of a phonetic alphabet as an aid for correct station identification is encouraged;"

While a voice/phone communication need not be limited to any one language, the FCC Rules does require that the phone identification be in English. CW is another acceptable identification emission.

Regarding examinations in other languages:

The FCC in August 1990 issued a communication to all VECs in which it specified that while no VE is required to administer and examination in a language other than English, there is no requirement that the examination must be administered in English. When administering the examinations in another language, the administering VEs should be fluent in that language.

VECs, including ARRL, have received requests to allow examinations to be administered in languages other than English. And, while no examinations have been coordinated by the ARRL/VEC in other languages to date, we have not ruled out the possibility. Any requests will be handled on a case-by-case basis.

213. 20 meter fire!

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 13:00:23 UTC
From: ham@wam.umd.edu
Message-ID: <1992Jul6.130023.19131@wam.umd.edu>
Source record: 287800

It seems to me that, since radio waves are electromagnetic disturbances, water is NOT a good idea. Remember what happens when you try to put out an electrical fire with water? ZZZAAAAPPPPP!!!

The only solution is to use dry chemical extinguisher-type material. It would be safe, would put out the fire, and at least the radios could be cleaned up. It may be expensive, but it's cheaper than 20,000 new rigs!

214. AEA->757GX cable pinouts

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 13:16:21 UTC
From: JMG%TNTECH.BITNET@cunyvm.cuny.edu
Message-ID: <01GM1V5XRC1S9GV870@TNTECH.BITNET>
Source record: 287802

Help Please...

I am trying to find the best way to connect my AEA 232MBX to
my Yaesu 757GX (older type not II). The AEA doesn't have
this Yaesu listed and I don't want to blow up the radio or
MBX. I would prefer to use the back Panel connections, if
possible.

Thanks in advance.

73s de Cookeville,TN
Jeff, AC4HF

215. HF synthesizer

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 13:18:01 UTC

Message-ID: <01GM1V81RBF89GV870@TNTECH.BITNET>
Source record: 287803

Hi,

a friend who doesn't have access to this net has asked that
I post this.

He has a crystal controlled digital marine radio and is
interested to know if anyone has successfully built an HF
synthesizer or knows of plans

thanks

Jeff

216. VHF Communications magazine on microfiche?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 13:38:23 UTC
From: rick@cs.sunysb.edu
Message-ID: <1992Jul6.133823.14775@sbcs.sunysb.edu>
Source record: 287808

Is VHF Communications magazine available on microfiche?

Thanks - Rick Spanbauer, wb2cfv

217. Let 20M burn! (was: Re: 20 M Fire prevention)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 13:47:02 UTC
From: robichau@lambda.msfc.nasa.gov
Message-ID: <1992Jul6.134702.9121@lambda.msfc.nasa.gov>
Source record: 287805

The plans to install sprinklers, Halon extinguishers, et al ignore a critical fact- band fires are occasionally needed to clear out old growth.

Think of the Yellowstone fires a few years ago. A band fire is just Nature's way of making room for new critters.

Burn, baby, burn!

>No CO2, either, as the quantities required to control a major band fire would
>be accused of causing more global warming.

>Water is poltiically correct. Anything else would be tied up in court by
>environmentalists.

NO! Water won't work either. The runoff would certainly be toxic from
all the burning plastic in modern rigs, not to mention all the
radiation products that the environmentalists would insist were
generated from operating a radio. Without a closed system to gather
and purify the water, you would not be allowed to put out the fire
with water. There is a bright side. It only takes three years and
approcimately $130,000 to get a permit to certify your recovery
system, if they don't change the laws in the meantime. K9ALD.

=I have a need for more output and am looking for a solution.

= Tnx Bob WN3K

While I don't remember the maximum output power, it is governed by the voltage of the battery. The maximum voltage that the 24at can take is nominally 12V (13.8V?). If I remember correctly, you can get about 3 watts output if you run the HT from your car (13.8V).

Operating time is governed by the ampere-hour (milliampere-hour) rating of the battery. ICOM sells various batteries with various voltage and milliampere-hour ratings.

SB SAREX @ AMSAT < KD2BD $BD186.06
STS-50 Elements and Special Bulletin (186.06)

STS-50 element set (orbit 135) from JSC thanks to John Shalamskas, KJ9U.

Due to antenna problems there has been another frequency change for SAREX, to 144.45 SIMPLEX, if you are involved in SAREX please read the special bulletin sent in by Jay Maynard, K5ZC, attached below. Note that this frequency is also being used for scheduled contacts with schools, please listen to be sure they are doing general QSO's before calling STS-50 on this frequency!
Thanks,
--GaryM

SAREX OPERATIONAL UPDATE
JULY 1, 1992 22:44 UTC
JOHNSON SPACE CENTER
HOUSTON, TX

SAREX activities aboard the Space Shuttle Columbia continue to center around issues related to the performance of the SAREX antenna.

Flight crew members KB5SIW & KB5SIX have worked closely with ground controllers and SAREX operational personnel in an attempt to improve antenna performance. During orbit 89 the SAREX antenna was modified by KB5SIX according to an IFM (In Flight Maintenance Procedure) drawn up by antenna

designers at the Johnson Space Center in Houston. Despite these changes, the antenna performance continues to be less than pre-flight analysis had expected. After reviewing all of the data collected and procedures attempted to this point, SAREX personnel have decided that on further adjustments or modifications will be made to the SAREX antenna system during the balance of this flight. As a result, frequencies available for SAREX operations have been severely limited.

Based upon current flight hardware performance coupled with a desire to conform as nearly as possible with world-wide band plans, SAREX operational personnel have been forced to make yet another frequency change to STS-50 operating frequencies. Effective from orbit number 101 (23:00 UTC July 1st), All SAREX OPERATIONS WILL TAKE PLACE ON 144.450 MHz SIMPLEX FOR THE BALANCE OF THE STS-50 MISSION.

It should be pointed out that consistent with SAREX mission objectives a number of special contacts between the crew aboard Columbia involving school students and youth groups around the world were planned pre-flight. Due to the frequency changes being announced in this bulletin it will be necessary to these contacts to take place on the open contact frequency of 144.450 MHz simplex.

SAREX asks for the cooperation of all radio amateurs in allowing the crew members aboard Columbia to facilitate these specially planned contacts. Operators attempting to contact the Columbia astronauts are requested to be mindful of these special contacts and yield to these groups when either KB5SIW or KB5SIX indicate that they are conducting such contacts during the balance of the mission.

73 and Good Luck From The SAREX Team

> paul, ni1d
>

I couln't find anything about this in the FAQ file (perhaps it should be
added?) so here goes?

How does one go about acquiring a "service manual" or other form
of detailed schematics for a given piece of equipement? It seems
to me that the manufacturer would be extreemely reluctant to dis-
tribute said information for competitive reasons. Am I all wet?

Tx

A little known but high quality key is one made for the commercial telegraph service. These Western Union keys are like rugged Nye-Viking units but feel much better.

I have never paid more than twenty dollars for one although some needed quite a bit of cleaning and polishing. Anyone who would like some sources for these keys should drop me a line.

73

Grover
WT6P

p.s. there is an organization called the Morse Telegraph Club whose membership is primarily retired W.U. and railroad telegraph operators. Often members are on the air using American Morse.

I have seen this technique described in ham magazines before, but when I tried it with my Butternut, it didn't work well (lousy VSWR). I have also seen the same scheme touted for building a multiband dipole and when I tried that, it definitely didn't work. Has anyone gotten this to work? If so, what might I be doing wrong.

Julian, in the first place, if you think that you will ever accomplish anything constructive by tossing insults around you have quite a bit to learn about life. In my state of geezerhood (42) I have managed to figure out that the insult usually only detracts from a good point rather than adds to it. I will not belabor the point.--

I do want to point out to those who read this newsgroup that there is a certain amount of irony that, on one hand, we (ARRL and ARRL HQ) are criticized for our position on the recent deletion of the Morse code requirement for the Technician license, and, on the other hand are criticized for a -percieved- position of our defending the existance of CW.

Kearman's statement was personal opinion. (Perhaps he could have made that a bit more clear.), but, in MY personal opinion, he is correct. Keep in mind that he is not saying that you must (or even should) operate CW, he is just saying that it is not very nice to criticize those who enjoy CW just because you don't like to use it.

I admire you for one thing -- you obviously care about Amateur Radio and are willing to act on your feelings. I hope that someday you can learn to channel your feelings a bit more constructively.

Message-ID: <tech.710439901@aupair.cs.athabascau.ca>
Source record: 287825

I thought it was a simple question about telegraph keys but it was an invitation for every airhead in North America to vent his spleen in one way or another.

I did learn a tiny bit about US surplus straight keys but the usenet seems to use a poor data transmission protocol, I only got about one byte of data for every 68,000 bytes of dribble.

As for keys, I ordered one from Fair Radio Sales but only time will tell what I ordered. Geeze you guys....

Email to this address bounced. Anyway, here's the info. The Cornell ARC is located in Barton Hall at the top of the tower on the left side (as you look at the front of the building). You can see the antennas from anywhere on campus where you can see Barton.

Also, you might try contacting Steve Powell, N2BU who has an office in the Theory Center and is active with the club.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 068 (OPDX.068)
July 6, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, DXNL, DF4RD, WB3LHD, KD6PY, W8BE, N8JQX, K8YSE, K0BJ, UA6BGB and YU3FK for the following DX information.

HCJB - QUITO, ECUADOR. For those SWLs, there is an interesting program on HCJB every week called, "Ham Radio Today". The program host, John Beck, talks about AMTOR, computers, DXing (Yes, QSN Reports), packet, scanners, etc. Ham Radio Today can be heard on the following times and frequencies:
Wednesday 1030 UTC on 21445(USB), 11925 and 9745 kHz
1930 UTC on 21480, 21455(USB) and 17790 kHz
Thursday 0100 UTC on 21455(USB), 15155, 15115 and 9745
0300 UTC on 21455(USB), 15155, 15115 and 9745
According to the 1991 World Radio TV Handbook published by Billboard Publication, Inc, HCJB offers a new QSL card to SWL's every 2 months. Send a complete reception report to HCJB, Casillia 691, Quito Ecuador. You can also request a program schedule or a specific language division schedule.

KH9, WAKE ISLAND. Jim, WR1Z/KH9 (VK9NS), will be leaving the island July 8th. (See T31)

OH0, ALAND ISLAND. Look for Hillan, N6HR, during the IARU HF World Championship Contest, as OG0C July 11-12. Hillan will be active before and after the contest as OH0/N6HR.

P5, NORTH KOREA. Josef, OK1DTG, who finished his 18 months stay in P5 land, states that written permission is promised by the military. He was only allowed to operate 40 meters CW with 10 watts. OK1DTG/P5 was active only April 12-24. He made 600 QSOs with JA, HL, and W stations. He NEVER operated on 15 meters.

RX6B/UZ4HWS is the callsign for a DXpedition to UST-Labinsk in Southern Russia near the Black Sea. Andy, UA6BGB, who is one of the operators, gave the QSL route as P.O. Box 62, Kitee 82501, Finland. It seems that many Russian hams are opening postal boxes in neighboring countries where mail reliability is better. Andy was advised that Box 88 did not want to receive QSL cards for the RX6B/UZ4HWS Dxpedition. The only route will be

via Finland. Andy mentioned that his personal post office box is not dependable. Let's hope that this method of QSLing provides a quicker and more reliable service.

S2, BANGLADESH. Denny, GW3CDP, reported that Erik, WZ6C, is on his way back to S2-land in about 7-10 days. He will be operating from there if all goes well by the middle of July. KYFC! On the same note, supposely the Bangladesh security has passed the new "Amateur Regulations" without objection. So be looking for S21A on the air soon.

T31, CENTRAL KIRIBATI. Jim, VK9NS, may be active from Kanton Island (OC-043) next. Jim has received the "OK" from the Ministry of Home Affairs and the necessary permits will be issued.

UU6U AND UU6U/P. These will be the callsigns that will be used for the Elbrus Mountain DXpedition by the High Mountain DX Club July 25th to August 15th. Operation will be from the 3000 meters level as well as from the 5000 meters. QSL route will be P.O. Box 62, Kitee 82501, Finland.

ZF, CAYMAN ISLANDS. This will be the last week to work Joe WA6VNR/ZF2AH and his wife Nancy N6RLE/ZF2JT from ZF-land. You can usually find ZF2AH in the CW portion on 17 meters or 20 meters. QSL to CBA.

MORE ON YUGOSLAVIA. With the continued break up of Yugoslavia, a very informative message was sent out from Iztok, YU3FK. The message explains to DXers what groups or possible new countries they are talking to. You may want to save the following list of callsigns for future reference:
Republic of Slovenia: YU3, YT3, YZ3, 4N3 and 4O3
Republic of Croatia : 4N2, YT2, YZ2, and 4O2. (The YU2 prefix is no longer used on Croatian territory controlled by Zagreb government.
Rep. of Bosnia-Herzegovina: YU4, YT4, YZ4, 4N4 and 4O4.
Republic of Macedonia: YU5, YZ5, YT5, 4N5 and 4O5.
Union between Serbia and Montenegro by regions:
Serbia: YU1, YZ1, YT1, 4N1 and 4O1.
Montenegro: YU6, YZ6, YT6, 4N6 and 4O6.
Vojvodina: YU7, YT7, YZ7, 4N7 and 4O7.
Kosovo: YU8, YT8, YZ8, 4N8 and 4O8.
Numbers 9 and 0 were reserved for special occasions (ex. Olympic Games). "New prefixes are being discussed, but there are more important questions to be solved", says Iztok.
Special added note: It seem as of July 4th stations in Croatia have begun using the 9A prefix. Stations reported: 9A1A, 9A1CRT, 9A1GIJ, 9A2AJ (QSL via YU2AJ), 9A2AS, 9A2CW, 9A2FV, 9A2MP (QSL via YU2MP), 9A2NA (QSL to Box 19, Novigrad 51466, Croatia), 9A2NJ, 9A2PM (QSL via KA9WON), 9A3PA, 9A3RY, 9A3SM and 9A3TR (QSL via YU2HDE).

DX TIDBITS..... Bruce, K0BJ, informed OPDXB that his operation with Jack, N1DX to Desecheo (KP5/K0BJ & KP5/N1DX) made 6300 QSOs (mostly CW) with one transmitter in 73 hours. They used a Spider mobile whip and 7 ft. high 150 ft. longwire. Bruce states sending direct QSL requests to K0BJ or N1DX are ok now..... OD5ZZ 145.890/1530z and A41JT 145.915/0730z

were active on OSCAR 13.... Taiwan, BV-QSL Bureau has a new address:
P.O. Box 93, Taipei, Taiwan.... For up-to-date QSN reports from the
Ohio/Penn DX Cluster Network call BARF-80 BBS online at 216-237-8208
running 14400 to 300 baud 8/N/1. Download the file DXQSN.ZIP which

232. Finally on the Air!

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 17:19:45 UTC
From: megabyte@chinet.chi.il.us
Message-ID: <1992Jul6.171945.9550@chinet.chi.il.us>
Source record: 287749

Inspired by my work on Field Day (10M and Oscar), I got my station on the air this weekend. I'm using my TS140S and an Alpha-Delta SWL sloper antenna and a MJF tuner. I'm not quite sure of the antenna.. it works, but I don't know how to describe it... Let me see...

25Ft. Mast

```
| o\ Center coax connected to 60 Ft. sloping element with 2 Wire coils
| l \ \ First 15 Ft has parallel element (No Capaciters!)
| l \ \
| l \ \
| l \ \
| l \
| l Braid =
| l connected = (Coil #1)
| l to wire which\
| l comes strait \
| l down and =
| l connects to = (Coil #2)
| l ground system \
| l \
| l \
| l \
| l \
| l o
| l |
| l | 8 Ft. tall mast
==l============================================== Ground level
------------
! ! ! ! Ground system
```

My problem is I'm not sure of a short consise way to describe this antenna on the air aother than a "sloper". What would this be called?

I also have two questions about awards. First, I understand that there is an award for working all ten call zones, but it is not an ARRL award. Can anyone help me here?

Second, on WAS, what was/is the hardest state for you to have gotten? I'm just starting of course, with 7 states done, but I'm wondering what I can look forward to.

Hoping my enthusiaasm isn't just old hat to you all, 73

233. QSL Post Office (not bureau) out of business

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 17:26:56 UTC
From: bruce@Think.COM
Message-ID: <139vp0INNggp@early-bird.think.com>
Source record: 287814

I've posted before on the QSL Post Office, a private enterprise started by someone in Colorado to handle domestic QSLs more cheaply. I used them for a batch of several hundred domestic QSLs, and they seemed to eventually all get out.

It's all moot now, since the QSLPO is now out of business. I received a letter the other day from the guy running it listing reasons why he was giving up (a long list of gripes on which I won't elaborate).

A suggestion wass made for a Field Day on short notice...

I'd like to suggest that even if the DATE for Field Day is known, that one can have, err, simulate a disaster quite well, simply by not letting the folks attending know WHERE the event will be held.

Have two to three folks scout out locations, and on Friday evening, pass out maps to the site. Or, for extra credit, combine with a fox hunt. :-)

In rec.radio.amateur.misc, julian@bongo.UUCP (Julian Macassey) writes:

Julian,

These can be fairly difficult devices to tame down, especially "after the fact" -- after they have been improperly designed in the first place. They fall under Part 15 of the FCC regulations, that, in essence limit the radiation from these devices to an absolute level, and furthermore stipulate that if they cause interference to other services, the operator (your neighbors in this case) must take whatever steps are necessary to reduce the interference, including terminating their operation.

The easiest solution to implement is to replace the devices with ones that are less noisy. Unfortunately, ARRL HQ has not received many reports about which of these devices are good and which ones are noisy (more about this in a future post from me). If anyone on Internet has a light dimmer that does not cause interference, please either post it for Julian (and all the others who are in need of help), or send me email. I will compile a list and add it to our EMI/RFI Resources Directory (available for a large SASE from our Technical Department Secretary).

Of course, from a practical point of view, the likelihood of convincing your neighbors to actually cease operation of these devices, or even to effect the needed EMI cures, is fairly small.

I will offer a few suggestions. First, if you are not a licensed electrician, leave your neighbor's wiring to the pros. You might run afoul of local or state laws, and might be held to blame for any electrical problems they ever have, including the demise of their 40-year old toaster.

An AC-line brute-force filter may help. These are usually available from electrical supply companies. It will need to be installed in the wiring, right at the offending device. In some cases, a ferrite common-mode choke formed by wrapping 10 or 15 turns of the electrical wiring through a #43 ferrite toroid core may also help. It may be possible to add a bypass capacitor to the internal circuitry of the unit, either across the hot and neutral leads, or one each from the hot and neutral lead to the ground lead. Use AC-rated (Underwriters Lab) capacitors -- available from Digikey (800) 344-4539 -- the 0.01 uF 125 VAC part number is P4471, price 10 for $6.02. These cures MUST be performed by qualified personnel (licensed electricians in most jurisdictions).

IF and only if the signal is being conducted via the power lines into your station receiver by its power lines, you might effect some improvement by adding an AC-line filter (one that I always seem to remember is Radio Shack catalog # 15-1111) at your receiver's AC-line cord. If you can

locate your receiving antenna farther away from the radiating devices, the interference may be lessened somewhat.

I have your address from your post. I will send you the applicable ARRL handouts. Perhaps we can help you find a solution to what is troubling you.

No, not even in the same language. "English" as spoken in the states
has a different alphabet pronouncation from that spoken in Canada.
For example, the letter Z is pronounced "zee" in the lower 48, but
"zed" in the Canada. Now if we go to Spanish or French there are
lots of differences. I guess a foreign language isn't a requirement
in school today? 8^)

Splash.

Since the competition can simply buy one of the competing radios,
and take it apart, suppressing the service manual hardly does any good.

You can often buy the service manual at the same ham store that sold you
the equipment. If not, it's usually orderable from the manufacturer's
service depot.

I don't buy radios (or most other electronic consumer goods) I can't get
a service manual for. Often that influences my choice of brand. I
suspect that there are enough people like me that the manufacturers have
learned to make the manual available.

=or merely more operating time?

=I have a need for more output and am looking for a solution.

= Tnx Bob WN3K

While I don't remember the maximum output power, it is governed by the voltage of the battery. The maximum voltage that the 24at can take is nominally 12V (13.8V?). If I remember correctly, you can get about 3 watts output if you run the HT from your car (13.8V).

Operating time is governed by the ampere-hour (milliampere-hour) rating of the battery. ICOM sells various batteries with various voltage and milliampere-hour ratings.

>the money, and how difficult it is to build.

I had no success building the PA-1. The power output
is about the same as the input (2W in, 2W out) I had
difficulty in building it as well as finding an adequate
heat sink.

The instructions for the kit start with several warnings
about how difficult the kit is to build, and they
recommend the pre-wired version.

Some people on the net have built one successfully. However,
if you are not an experienced kit builder, I would avoid it.

Bob,

If you have an old 2AT and put more than a 9v pack on, you are taking chance
blowing out the regulator diode and a few resistors.
I have repaired two Icoms which had the larger(higher voltage)
packs put on. If you want to get more pwr out DON`T put more voltage on a 2AT,
put an amp on instead.

The 24AT will put out about 5 watts if supply is 13.5 volts.,measured
with a Weltz
meter.

243. Which 2m rig for packet?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 19:45:52 UTC
From: jahern@geohub.gcn.uoknor.edu
Message-ID: <1992Jul6.194552.13651@constellation.ecn.uoknor.edu>
Source record: 287821

I am considering buying a new 2m "mobile" rig for use at home for
both packet and regular 2m FM ragchewing. I currently use a
Kenwood TR7800 (which I plan to put in my car), and my main gripe
is this:

To do packet, I have to unplug the mike, plug in a cable to my
PK232, and plug in a cable in the back to get audio from the
external audio jack. To do go back to normal operation, I then
have to unplug the cable in back, and replace the mic plug into
its jack. Even an external switch wouldn't help, since putting
a plug in the external speaker disables the internal speaker.

My question (finally!) is this: Are there 2m rigs with an
accessory plug for packet, as there is on a Kenwood TS440,
for example?

244. Where can I snag LAN-LINK 2.0 for packet radio?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 19:46:05 UTC
From: gary@kimbark.uchicago.edu
Message-ID: <1992Jul6.194605.29656@midway.uchicago.edu>
Source record: 287820

I saw a posting on Packet regarding LAN-LINK 2.0? This is a shareware program (very feature rich) used for controlling (primarily) a PK-232.

I have LAN-LINK 1.58. Was wondering where I might obtain (via ftp) a version 2.0 copy? I asked archie and archie doesn't know.

For people who have never used LAN-LINK ... check it out. LAN-LINK defines the word "excessive". How many features does one need? I want to see 2.0. I didn't think there was anything more one could add beyond 1.59 ... :)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 20:08:57 UTC
From: karn@qualcom.qualcomm.com
Message-ID: <1992Jul6.200857.17066@qualcomm.com>
Source record: 287826

In article <12v6i2INNe1v@network.ucsd.edu>, brian@ucsd.edu (Brian Kantor) writes:
|> The radar has gotten so bad lately that pings between a ground station
|> and our mountaintop 56kb site on 433 MHz get only about a 30% return
|> rate. [...]

Well, I found one good way to keep the radars away. Take a spectrum analyzer home to get a good look at one. They did for the entire 3-day weekend just ended... :-(

Actually, I did see one weak radar. I took a look at it with the analyzer in zero-span mode, 1 Mhz resolution bandwidth (the maximum), and a 500 microsec horizontal sweep rate. I saw fairly square pulses approx 50 microseconds wide. This is, unfortunately, almost three bit times at 56kb/s. Whether they're using pulse compression or simply running longer pulses in order to let the receiver trade resolution for S/N ratio at longer ranges I don't know.

So if this radar is typical (I only have this single sample) it looks like a simple pulse blanker will NOT fix the problem here. Looks like changing bands is the only near-term fix.

Another, longer term possibility is forward error correction (FEC). The Navy uses it to protect shipboard communications against radar interference, so it seems promising. But from some informal conversations around here it unfortunately doesn't look like a simple retrofit to a WA4DSY modem for various reasons.

Perhaps it's time to work on a brand new medium speed (i.e., 50-100 kb/s) MSK modem that has both FEC and coherent demodulation built in. Sure, it would be more expensive than the WA4DSY design. But it would give a *substantial* performance improvement. Coherent demodulation would give 3 dB, and soft-decision Viterbi decoding would give 4-5 dB in the presence of Gaussian noise, and *MUCH* more with non-random QRM like radar. These gains would directly offset the money you'd otherwise have to spend on bigger power amplifiers and antennas, neither of which are all that cheap to begin with.

Phil

Message-ID: <1992Jul6.203015.16136@mcshub.dcss.mcmaster.ca>
Source record: 287827

Please note:

1. The ICOM 2AT does not have the same range of voltage protection that the later ICOM units have (e.g. 02AT, 2GAT, 24AT 32AT etc.). If you put 13.8v into it you will kill it. To operate from a car you need the DC-1 regulator unit or equivalent.

2. No matter what you do, you won't get much more out of a 2AT than with the standard battery pack. Even if you could squeeze an extra watt out it would produce an insignificant increase in performance.

If you must have lots of power in an HT, you might be able to pick up a 2GAT at a good price. This will give you 7 watts with 13.8v in (battery pack or car battery). But even that is only about 3dB more than you are getting with the 2AT.

Just my $.02.

Do you know what kind of PL n032 is? I found this
after the list freq on our motorola radios.

250. 9A, and ZA1A

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-06 21:24:11 UTC
From: furr@pilot.njin.net
Message-ID: <Jul.6.17.24.10.1992.24995@pilot.njin.net>
Source record: 287731

I have 2 dx questions:

-- Is 9A really Croatia? How do we know? 9A's are all over the
20m CW band. Will 9A cards ever be good for DXCC? Will XCURRENT 9A
cards be good -- i.e. are these calls really legitimate ones?

-- I had a QSO with ZA1A two days ago. At least that's what he
said he was. Is this the old ZA1A? I thought this call was retired?

Email answer fine.

Thanks, and 73,

}
Hummm. interesting...

I'm in a "no antennas allowed" apartment complex. However, I do have an attic. I ran a 50' length of RG58 up there. I grounded the braid to a coldwater pipe and hung a hunk of magnet wire on it. It worked pretty poorly, not to mention that I melted the coax from all that "RF that had no where to go, so it turned into heat" phenomenon.

An OT told me to rip out the random length magnet wire, and put a 33' length on it. This worked pretty darn well (1/4 wave). I then added several other lengths and got the 30-20-17-15 meter bands. The other "legs" are only one to two inches away from the 40 meter one. All of them do have a null, except for the 40 meter leg - it will only go down to 1.7:1 (my guess is I don't have a decent ground system to counterpoise it).

ANYWAY I don't know about the radials, but this does work for me.
(The OT *did* say that if I *did* run radials the antenna would perform that much better).

There's one in the August issue of (I think) Radio Electronics magazine.
I just got a copy, so havenm't evaluated

I just got a copy, so I can't say if it's "good" or not. You have to
build it yourself, though, so for some maybe it's not "good".

Message-ID: <1992Jul6.221618.6840@CSUFresno.EDU>
Source record: 287741

I want to get on HF with as little $ expended as possible.
I'm inclined to think that building my own QRP rig would be
a fun, cheap, and educational way to go. I'm considering
40 meters.

Can anybody point me to good books/references/articles on
the subject of building QRP kits & homebrew gear? I've
put together a couple of other kits in my time, but I
figure that a whole receiver/transmitter pair would be
something I'd like to read up on first (especially if I
don't use a PC board).

Thanks & 73

What you are being is dense. Jim Kearman's posting gave some facts
about equipment prices and current FCC regulations, but mostly what
he did was to request tolerance for everyone's views. He did not
belittle those who do not share his preferences, unlike some people I
could mention.

Please grind your axes somewhere else--and take your affected spelling
of Morse with you.

Here in Ottawa, we were considering using L-band for high-speed linking
using WA4DSY modems. We knew there was this doppler radar at the
airport (about 10 miles south of our repeater). We took an HP
spectrum analyser avec HP-IB and a MAC with some funky HP-IB
lab software up there, and let it run for a few days. What we
observed was that more-or-less the entire 1240-1300MHZ band segment was
rendered useless. The "beam" passed through our site about once
every 5 seconds. The fine structure of the signal tended to suggest that
fairly sophisticated techniques would be required to deal with that kind
of interference. Our approach has been to pester our repeater council
for more 220 and 440MHZ allocations...

Unlike Phils radar signals, ours were *strong* [I seem to recall them
being in the -60 to -40dBm range].

Which languages? German? French? Italian? Japanese? NOT LIKELY! Face it:
the fact is the ONLY group that is pressuring for this is the Mexicans!

Very BAD idea! We have enough problems with "island subcultures" now..just
imagine the nightmare of a whole cult that didn't even have to speak English
to *get* their licenses...the ARRL had better do something to stop this one!

10 meters is awash with L.A./Ca. Hispanics that refuse to ID in English..dumb
bastards! Oh, and check this out: Our OO's all claim that there is nothing that
they can do about it, nor will they get involved to stop these guys from QSOing
with the bootleggers that float up from 11 m and the "freeband" !!

English is the Official Language of the State of California, by Law. Therefore
the tests here had better be in English...besides who would really benefit from
a change to this? Would it make life nicer for the majority of the Amateur ranks?? NO! It
just makes it easier for a small minority that cannot seem to learn
to speak the official language...what next?! It's bad enough the buggers don't
have to know enough English to pass their driver's license tests...just try to
get a license in Mexico...they WON'T give you a test in ENGLISH!

Luigi AA1AA writes:

"Nobody wants to waste their time reading about fanaticism in this group,
whether it be pro or anti CW."

Unfortunately, the status quo is fanatically pro-CW, since it is _required_
on the FCC Amateur exams (other than Technician). Therefore, just to keep
the playing ground _even_ we need a regular dollop of anti-CW sentiment.

262. Two-Line Orbital Element Set: Space Shuttle

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 02:50:01 UTC
From: tkelso@afit.af.mil
Message-ID: <1992Jul7.025001.24649@afit.af.mil>
Source record: 287746

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

263. Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 02:51:15 UTC
From: tkelso@afit.af.mil
Message-ID: <1992Jul7.025115.24835@afit.af.mil>
Source record: 287748

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space and rec.radio.amateur.misc on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (also updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a eleven-character name.

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description

```
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

>bob

Um.... TOTALLY WRONG!

99.9% if not ALL U.S. military aircraft have the civillian VHF
aircraft band in addition to the military aircraft band, just as virtually
all military airfields have transmitter(s) for 118-137MHz. These days,
they're even putting HF radios into tactical aircraft such as F-15s & F-16s,
let alone stuff like SINCGARS.

For future reference, Willow Run's UHF freq is 351.7MHz, although you'll
also hear many of the military aircraft being controlled via KYIP tower on
120.0MHz.

'SHOW CONTROL' uses a 122MHz frequency, & they also maintain a circuit
with KYIP tower on a 171MHz frequency (very low power).

Other operations are conducted on 154.570.

I was out of town for this year's air show at Willow Run, but last year
I caught the stealth fighter ("BRAHMA 91") talking to their KC-10 tanker on
a UHF military aircraft band freq, & then "Show Control" on the 122MHz
frequency.

266. Funny Antenna Config

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 04:13:16 UTC
From: mas@mipl8.jpl.nasa.gov
Message-ID: <MAS.92Jul6211316@mipl8.jpl.nasa.gov>
Source record: 287752

I suffer from the dreaded zoning ordinance/CCR problem regarding antennas at my condo complex. So, I had this idea to put up sort of a minimal impact intallation, making use of some mobile VHF and UHF antennae that I already own, plus some coax and a triplexer or two. Here's a schematic:

```
144MHz HT------+ +------144MHz Antenna
| |
220MHz HT------Triplexer--------------Triplexer------220MHz Antenna
| |
440MHz HT------+ +------440MHz Antenna
```

I already own the radios (Kenwood TH-{225,315,415}A's) and antennas (Cushcraft CS-{147,220,450}M magnetic mounts). I'd have to buy to two triplexers, the intervening coax and random mounting stuff for the coax to make it look pretty on its way up the side of the building.

Is this a workable solution? Will the mag mounts survive being outdoors all the time? Will putting the mag mounts on top of my AC/Heating unit leave my radios open to interference from it? Is this the cheapest solution? Would it be better to go with a triband antenna instead of the second triplexer and the three antennas I already own? Which config would have less intermod? The three antennas would be within a few feet of eachother. Would the finters in the triplexers reduce the intermod? When I've had the three antennas set up in my room, I've noticed some intermod running packet and voice at the same time.

The triplexers from Comet cost about $85 each. I'd need about 50ft of coax ($15-$20). Estimate $20 for mounting conduit and hardware. Total cost ~= $210 plus a hole in my wall.

This configuration has some advantages. It's small and can't be seen by anyone in my complex (although some of my neighbors will see it). It's easily disassemblable. If I felt like going through the formality of getting a zoning permit, the antennas would qualify without any problem.

Basically, is this a decent solution? I remember the discussion a while ago about hooking up gain antennas to HT's. But, I've been using these antennas for a while with my radios and really haven't noticed a problem with intermod from other than my own radios.

Source record: 287754

FROM: MONK APOLLO (SV2ASP/A) TO: A.R.R.L, DXCC DESK
DOHIARIOU MONASTRY 225, MAIN ST.
630-87, MOUNT ATHOS CT 06111
GREECE U.S.A.

July 1, 1992

Dear Sirs,

I did send you, a long time ago, a letter with all the
official papers in which I prove that the transmissions of the
German radio amateur BALDUR DROBNICA (DJ6SI) from Mount Athos
were illegal. Unfortunatelly, until now I did not receive any
regular reply from you.
DJ6SI, who overall illegally imported his transceivers in
Mount Athos, instead of understanding his mistake and ask for
apology, because he challenges an international scandal, he
continues his acts, with the same slyness.
The last act was to write an article in QST, probably the most
official magazine, which was published together with a photo
showing the cell in which he was hospitalized. The photo pictures
him and a monk (named Damaskinos), aside the bells of the cell.
The monk sent a letter to QST and me. I enclose a photocopy of
that letter to you.
In other articles that were published, DJ6SI mentions about
the CEPT Licence, but he is not telling the truth; he explains
the rules of CEPT LICENCE, the way that fits his purposes!
I asked the European Community (E.E.C.) to send a copy of this
licence to me. I posted you a photocopy, in order to show you
which is the truth and which is DJ6SI's false point of view.

Dear Sirs,
All the official papers relative to the subject are registered
in the files that the HOLY COMMUNITY OF MOUNT ATHOS, the GREEK
MINISTRY OF EXTRENAL AFFAIRS, the GREEK MINISTRY OF
COMMUNICATIONS, the GREEK RADIO AMATEUR ASSOCIATION (R.A.A.G.)
keep, as they are waiting for the last fair solution, that you
will finally cancel those transmissions DJ6SI made from Mount
Athos.
The Holy Community, with which I'm in continue contact, is
very irritated and disappointed with the handling of the problem
and informed me that they decided, that in the future they will
not permit to Greeks or foreigners make any transmissions again
from Mount Athos, except the monks of Mount Athos.
Persons and events like this, disturb the peace, the

regularity and the prays in Mount Athos; these things that all the people of the World have respected for more than 1000 years and will respect forever.
As a result, give this fair solution, because otherwise you will continuate these kind of problems, as many more will try to do the same and with the same shifty, mean way, that DJ6SI did.
Well, in this Holy place anything has to be done with legal methods, if we want to have the bless of GOD.
I want to believe that with the help of GOD's will, this affair will be finished appropriately, if we want to hear Mount Athos on the air again.

With great sorrow

Monk Apollo

P.S.:
Anything that was published concerning me and my transmissions from Mount Athos till now, is lie. Any true informations that will come will be valid only if they have a Greek signature.
If you don't cancel the transmission of DJ6SI, you will never again hear me on the air. Tnx

270. Re: 9A, and ZA1A

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 08:38:39 UTC
From: WKOEHLER@ESOC.BITNET
Message-ID: <92189.083839WKOEHLER@ESOC.BITNET>
Source record: 287555

Yes, 9A really is Croatia.

The prefix block 9AA - 9AZ has been issued by the ITU to this former part of Yugoslavia.

BTW, 9A1 was in use by San Marino (currently T7) many years ago although I suspect it was an inofficial prefix at that time.

Expect another new one sooner or later: S5 for Slovenia.

As for ZA1A, he seems to be genuine. QSL via OH2BBF.

73 & DX,
Wolf.

In article <1992Jul6.225953.24974@ttinews.tti.com> usenet@ttinews.tti.com (Usenet Admin) writes:
> English is the Official Language of the State of California, by Law. Therefore
>the tests here had better be in English...

Last time I checked, in our country Federal laws and rules preempt those of the states. So California's ill-conceived "English only" law is completely irrelevant to the FCC. And it would probably be found to violate the US Constitution if it were ever seriously tested in court. (See the First and Fourteenth Amendments.)

The vast majority of the US population understands English. As high a percentage, in fact, as at any time in our history. Consider the enormous waves of immigration a century ago from Germany, Italy, Russia/USSR and Austria-Hungary. Since 1820, these four non-English-speaking countries have *each* contributed more immigrants to the US than Mexico. And somehow English survived easily, without a law to defend it.

Sure, it is only natural that most of the government's business, including FCC ham tests, should be in English. But if there is sufficient demand for tests in, say, Spanish, they should be provided. After all, the tests and answers are standardized, and since the VECs are allowed to recoup their costs, why not let them respond to the demands of the market? Believe me, there will still be plenty of incentive left for an immigrant ham to learn English if he/she wants to talk to the average native US ham. And if he/she prefers to speak only to his fellow immigrants, why should you care? It's still a free, pluralistic society. So far, at least.

Anybody who thinks "official language" laws are a good idea ought to visit Montreal and ask the sizeable English-speaking minority what they think about Quebec's "French Only" law.

Phil

272. rec.radio.amateur.misc Frequently Asked Questions (Part 1 of 6)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 10:08:19 UTC

Posted-By: auto-faq script
Archive-name: ham-radio-faq/part1
Revision: 2.17 07/01/92 02:42:58

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

To reduce the size of each article, the FAQ information is posted in 6 parts:
Part 1 - Introduction
Part 2 - Beginning Amateur Radio questions
Part 3 - "Where can I find ..." computer questions
Part 4 - Amateur Radio Organizations and Publications
Part 5 - Common Advanced and Technical questions
Part 6 - Special Topics in Amateur Radio questions

Table of Contents
-----------------
Dates indicate last modification.

Part 1 - Introduction
** Table of Contents (7/92)
** How to Contribute to the FAQ Articles (7/92)
** Acknowledgements (7/92)
** Notes on "Netiquette" (4/92)

Part 2 - Beginning Amateur Radio questions
** What is Amateur Radio? (pre-4/92)
** Who can become a ham in the United States? (pre-4/92)
```

** OK, so how do I become a ham in the United States? (pre-4/92)
** Where can I locate information and books on Amateur Radio? (4/92)
** How much does it cost? (4/92)
** Where can I take the tests? (pre-4/92)
** What are the tests like? (4/92)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (pre-4/92)
** Should I build my own equipment? (pre-4/92)
** Should I build my own antenna? (7/92)
** Do I need a huge antenna and tower like my neighbor? (pre-4/92)
** Where do I buy equipment? (pre-4/92)
** I've only got one 'meter' on the front of my radio - does this mean it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-) (7/92)

Part 3 - "Where can I find ..." computer questions
** Where can I get ham radio software for my computer? (4/92)
** I don't have a news server at my site, how can I subscribe to the rec.radio.amateur groups? (4/92)
** I can read news at my site, but I don't have posting privileges. How can I post? (4/92)
** I don't have FTP capability at my site. Can I get files via email? (4/92)
** Where can I find Anonymous File Transfer Protocol (FTP) sites that have ham-related files? (7/92)
** I'm having trouble using FTP....HELP! (5/92)
** Are there any Telephone BBS's which have ham related files? (4/92)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Are there any on-line callbooks and geographical name servers? Access to FCC databases? (6/92)
** Where can I find modifications for my radio to extend its capabilities? (4/92)
** Where can I find VE sessions in my local area? (6/92)
** Why isn't XXX available electronically? (4/92)

Part 4 - Amateur Radio Organizations and Publications
** How do I use the incoming and outgoing QSL bureau? (pre-4/92)
** Anyone know anything about the QSL Post Office? (pre-4/92)
** Are there any news groups for CAP? (5/92)
** What's the name of the QRP club that issues QRP numbers? (pre-4/92)
** Can I send ARRL or W5YI electronic mail? (6/92)
** "Why doesn't the ARRL do...?" (4/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I become a 10-10 member? (pre-4/92)
** How do I join MARS? (pre-4/92)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (pre-4/92)
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio allocations and question pools? (5/92)
** Can I post my neat new ham related program on rec.radio.amateur.misc? (pre-4/92)

Part 5 - Common Advanced and Technical questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** I'm confused. What do all those abbreviations mean??? (5/92)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (4/92)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (pre-4/92)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (pre-4/92)
** I got TVI...HELP!!! (pre-4/92)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies does JPL and GSFC retransmit the shuttle audio? (5/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** How do I modify my current Amateur license? (4/92)
** I'm confused about XXX, should I ask the FCC? (new 4/92)

Part 6 - Special Topics in Amateur Radio questions
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (pre-4/92)
** What do I need to get started in packet radio? (5/92)
** What do I need to get started in satellite communications? (pre-4/92)
** What is available to get started in ATV, SSTV and WEFAX? (5/92)
** What are these contests I sometimes hear, and how do I participate? (7/92)

--Rec.radio.amateur.misc Frequently-asked Questions-----------------Part 1--

** How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider the following criteria:
- is it a commonly asked question?
- will its inclusion help reduce the usage of network bandwidth?
- how useful is it to beginning Hams or to the majority of Hams?
Contributions don't have to meet all of these but the minimum is one. We actually only ask that you consider these before contributing.

We can't necessarily include every question or every topic - the network simply doesn't have enough bandwidth to carry that much information. Besides, the point is that we're trying to conserve network bandwidth. You can find the locations of much more information by referring to the "Index to the rec.radio.amateur.* Supplemental Archives" posted monthly by Paul Schleck KD3FU.

If you suggest a question for this FAQ, please include the answer. You'll get credit for your contribution and you'll speed up the process of getting the information ready for distribution.

If you feel your contribution is sufficient to meet the considerations shown above, send it to hamradio-faq@uts.amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Ian Kluft (editor) KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Tom Sefranek WA1RHP tcs@ll.mit.edu (Shirley, MA, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Diana Syriac KC1SP dls@genrad.com (Hudson, NH, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

** Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Syriac's work or her editing of a contributor's work. Diana established this FAQ. She is now one of the larger group that maintains it but we didn't want her effort to be lost in the crowd.

** Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the news-group. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in

the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* As also mentioned in Part 5 of the FAQ, software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (pre-4/92)
** Should I build my own equipment? (pre-4/92)
** Should I build my own antenna? (7/92)
** Do I need a huge antenna and tower like my neighbor? (pre-4/92)
** Where do I buy equipment? (pre-4/92)
** I've only got one 'meter' on the front of my radio - does this mean it's
a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-) (7/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service
whose primary aim is public service and communication between
private persons. Amateur Radio operators are commonly called
hams. It's great fun to talk to someone in Japan on the radio!
Here's one ham's description of Amateur Radio: "Climbing towers,
roofs, trees, or any other fixed object to hang antennas. Restoring
ancient equipment to operation. Playing with glitzy new equipment.
Blowing up finals. Cutting holes in your (or your buddie's) car.
Building your own stuff. Wiping out your neighbor's TV and then
having to explain and fix it. The joy and magic of communicating
with someone half way around the world with a few bits of glass and
wire."

** Who can become a ham in the United States?
Anyone who is not a representative of a foreign government can
be an Amateur Radio operator in the USA. There are tests that
```

you must pass to get a license, however the tests are not insurmountable. There are 7-year-old hams and 80-year-old hams. There are many handicapped hams who get great enjoyment out of Amateur Radio.

** OK, so how do I become a ham in the United States?
There are now two entry-level class licenses in Amateur Radio. A Novice license requires passing a 30-question written test and a Morse code test given at 5 words per minute. A Technician license requires passing the 30-question written Novice test and a 25-question written Technician test, but no Morse code test. See local radio clubs or radio stores in your area for more information. Note that you can get a higher class license instead, simply by passing the required tests.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications. Be assured that once you get a callsign, the mail order ham radio companies will find you :-).

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. (The combined manual is new and was made for the codeless Technician License.) The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

** How much does it cost?
To take the Novice tests, it's free. To take the Technician or higher class tests, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests can be given by any two qualified hams of General

class license or above. The Technician tests and all higher class license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1992); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but
here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the
United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization
thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur
Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate
Radio System).
* Participate in transmitter hunt games and maybe build your own
direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals
back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out
local radio clubs. As well, some people have volunteered to be
an Elmer over the Usenet. Paul has volunteered to maintain that
list. If anyone wants to be an Elmer, or needs an Elmer, email him:
Paul W. Schleck, KD3FU, pschleck@unomaha.edu

** Should I build my own equipment?
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will

just get frustrated. Your first rig, therefore should NOT be a home-brew.

** Should I build my own antenna?
Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

** Do I need a huge antenna and tower like my neighbor?
No! Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

** Where do I buy equipment?
If you can afford new rigs, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

** I've only got one 'meter' on the front of my radio - does this mean it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)
Meter refers to the wavelength of the signal at which you are transmitting. There is a inverse relationship between the frequency (specified in kilohertz or megahertz) and the wavelength (specified in meters or centimeters). The relationship is described by the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

274. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 6)

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - "Where can I find ..." computer questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** Where can I get ham radio software for my computer? (4/92)
** I don't have a news server at my site, how can I subscribe to the
rec.radio.amateur groups? (4/92)
** I can read news at my site, but I don't have posting privileges. How
can I post? (4/92)
** I don't have FTP capability at my site. Can I get files via email? (4/92)
** Where can I find Anonymous File Transfer Protocol (FTP) sites that
have ham-related files? (7/92)
** I'm having trouble using FTP....HELP! (5/92)
** Are there any Telephone BBS's which have ham related files? (4/92)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Are there any on-line callbooks and geographical name servers? Access
to FCC databases? (6/92)
** Where can I find modifications for my radio to extend its capabilities?
(4/92)
** Where can I find VE sessions in my local area? (6/92)
** Why isn't XXX available electronically? (4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** Where can I get ham radio software for my computer?
Atari: John Adams KC5FW, 17106 Happy Hollow, San Antonio, TX 78232
"or tune into the weekly net Sundays 1600 UTC on 14.325 MHz".
MacIntosh: MacNet, John Seney WD1V 144 Pepperidge Dr, Manchester,
NH 03103 (sent 2 800k FORMATTED diskettes, one of which
contains a TEXT file containing your name, address, home PBBS,
your radio & computer interests and equipment).

(See also the information about Anonymous FTP and ham-related
telephone BBS's below.)

** I don't have a news server at my site, how can I subscribe to the
** rec.radio.amateur groups?
To subscribe to rec.radio.amateur.misc, send email to:

Info-Hams-Request@ucsd.edu (128.54.16.1)
```

In the body of the message, write:

subscribe Info-Hams

Similarly, to subscribe to rec.radio.amateur.packet, send email to Packet-Radio-Request@ucsd.edu, message is "subscribe Packet-Radio", and to subscribe to rec.radio.amateur.policy, send email to Ham-Policy-Request@ucsd.edu, message is "subscribe Ham-Policy", and to subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu (128.59.40.129), message is "subscribe swl-l (your name)".

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"; don't post to the newsgroup itself! Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

Another mailing list of interest is antique-radios. To subscribe, contact antique-radio-request@swbatl.sbc.com (Tom Adams). This mailing list is for discussions on antique radio, television and vintage electronics.

** I can read news at my site, but I don't have posting privileges. How
** can I post?
You can post to rec.radio.amateur.{misc,packet,policy}
by sending your posting email to Info-Hams, Packet-Radio, or Ham-Policy, all at ucsd.edu. To post to other newsgroups, send the posting email to (groupname)@ucbvax.berkeley.edu and for the groupname, replace periods with dashes.
For example, to post to sci.space, you would send your posting to sci-space@ucbvax.berkeley.edu.
All of the Amateur radio newgroups are archived on ucsd.edu under subdirectory mailarchives/{Ham-Policy,Info-Hams,Packet-Radio}.

** I don't have FTP capability at my site. Can I get files via email?
ANY BITNET, EARN, or NorthNET site can access the Princeton mail server. It will be most efficient if you know the complete path and filename for anything you wish to transfer, but you can use 'cd' and 'ls -l' commands to move about and browse the remote site's directories. The Archie database server may also be useful to search for files and their directory locations on FTP sites around the world (see below). Please be patient when using non-interactive mail servers such as BITFTP as each request may take several hours (or longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII

CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com (16.1.0.1). Commands include: REPLY
<mailaddr>, CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS,
COMPACT, UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>,
QUIT, HELP. Get the help file for more information by sending mail
with the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

** Where can I find Anonymous File Transfer Protocol (FTP) sites that have
ham-related files?
Tom Czarnik coordinates a fairly definitive list of anonymous FTP
sites, their IP numbers, time zones, general contents, and access
policies which he posts to the comp.misc, comp.sources.wanted,
alt.sources.wanted, and news.answers newsgroups. It is itself
available via anonymous FTP (how about that?? :-) from (among other
places) pit-manager.mit.edu (18.172.1.27) under directory
/pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. Archie may be accessed by
telnetting to one of the following sites (use the one closest to you):

Finland/Europe: archie.funet.fi (128.215.6.100)
Canada: archie.mcgill.ca (132.206.2.3)
Australia/New Zealand: archie.au (128.184.1.4)
Israel: cs.huji.ac.il (132.65.6.5)
UK/Ireland: raquel.doc.ic.ac.uk (146.169.11.3)
USA (Maryland): archie.sura.net (128.167.254.179)
USA (Nebraska): archie.unl.edu (129.93.1.14)
USA (New York): archie.ans.net (147.225.1.2)
USA (New Jersey): archie.rutgers.edu (128.6.18.15)

Login is archie. Type "help" at the prompt for a description of all
server commands.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites:

ftp.cs.buffalo.edu (128.205.32.9)
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info and
the KA2UGQ worldwide BBS list on ~pub/ham-radio/phone_bbs_list

wsmr-simtel20.army.mil (192.88.110.20)
Keith Peterson, W8SDZ, has apparently returned as the
maintainer of this huge repository of ham-radio (software and
modifications), MS-DOS, and CP/M files. To find out how
to submit files to this archive, please read his informational
posts to the comp.binaries.ibm.pc.archives newsgroup. If you
cannot directly FTP from wsmr-simtel20, there is a mail server
that can help. Send mail with the text "help" to
listserv@vm.ecs.rpi.edu (128.113.5.11).

wuarchive.wustl.edu (128.252.135.4)
A "mirror" of the files available on Simtel20, plus a *LOT*
more. A more user-friendly Unix environment (plus a faster
net connection) makes this site preferred over Simtel20.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/easier
access.

ucsd.edu (128.54.16.1)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
and TCP-Group digests.

uxc.cso.uiuc.edu (128.174.5.50)
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Syriac as well as ASCII readable ham radio
question pools.

apple.com (130.43.2.2)
cd pub/ham-radio - Ham software and information, especially
MacIntosh software

ftp.uu.net (137.39.1.9)
wuarchive.wustl.edu (128.252.135.4)
wolfen.cc.uow.edu.au (130.130.68.4)
athene.uni-paderborn.de (131.234.2.32)
nic.funet.fi (128.214.6.100)
ham radio files and software for the Amiga computer system

charon.amdahl.com (129.212.11.1),
cd pub/radio/amateur - the most up-to-date copy of the FAQ.

If you experience difficulty connecting to the above FTP sites, read
the telnet/FTP troubleshooting hints below or check with your local
system administrator.

** I'm having trouble using FTP....HELP!
The unfortunate situation here is that Netnews is far more prevalent
than direct Internet hookups, accurate name servers, smart mailers and
routers, and of course, telnet and FTP client services. What this
means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 137.48.1.1). The exact IP number
for the site can be obtained via the nslookup utility, if your
computer supports it....or check the FAQs. Your host may not
recognize the "fully-qualified domain name" (like
callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP
number.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),

then the manner at which the port qualifier is entered may be
system dependent.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)

Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* If all else fails, ASK your system administrator or check system
documentation.
* Compression techniques are different for different operating systems.
However, these hints should help: foo.sit needs MacIntosh UnStuffit
to unstuff; foo.hqx needs MacIntosh BinHex to uncompress; foo.Z
needs Unix 'uncompress' to uncompress or VMX compress_vms.exe (on
gatekeeper.dec.com) will work too. If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc.

** Are there any Telephone BBS's which have ham related files?
WB3FFV has one, phones are 301-625-0817 or 301-625-9482 or
301-625-9663. Data settings are 8 bits, NO parity, 1 stop bit.
Login is bbs, no password.
This BBS is also available via UUCP, login is uucpanon, no password.
For a listing of available archived, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit.

There is a comprehensive worldwide phone BBS list put together by
KA2UGQ, available from Simtel20, the Simtel Mirror on Wuarchive,
and the Supplemental Archives at ftp.cs.buffalo.edu.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by
volunteer hams and provide bulletins of specific interest to amateurs,
hence they are perfectly legal to rebroadcast on ham bands according
to FCC Regulation 97.111B(6). To lessen the load on the dialup lines,
consider getting your local repeater operator to rebroadcast it, or
tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly,
KC9RP, located in Illinois. The news is typically updated 8am CST
Fridays. Phone numbers are 1-708-299-INFO (299-4636) and

1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations
for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm
Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Are there any on-line callbooks and geographical name servers? Access
to FCC databases?
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu (currently 128.205.32.2)
ham.njit.edu (currently 128.235.1.10)

There is also a general geographical name server at:

martini.eecs.umich.edu (currently 141.212.100.9)

The callbook servers sit on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory
and they support fairly detailed help facilities. The first command
you should execute when connecting to one of these servers is "info".
This will list general info about that server and how to use it. You
should then type "help" to list the various commands available.
Typing "help" followed by a command name will give you a little more
detail about that command. Servers allow searches by call, last name,
zip code or city and also provide regular expression filters to trim
your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty
Carruth, N7IKQ. This database currently contains US and Canadian
callsigns and it does not contain club calls. A new version of the
database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com
(The UUCP address is ...!uunet!dptspd!callbook). In the body of the
text, say "lookup" followed by callsigns you want to look up. If
your mailer appends signature files, you should put a line "quit" at
the end of your request (before the signature file). If you want
help, put the word "help" on a line by itself. Here is what a
request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at n8emr!callbook@osu-cis. The
subject line is the list of callsigns to lookup. All other lines
are ignored. This same callsign server can be accessed with packet
radio via cbook@n3jyv.#cmh.oh.usa.na. The body of the message should
include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS,
and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..."
(where call1 call2 .... is space separated list of callsigns you want
to lookup).

If you are a packet radio station, callserver data is available from
REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,
separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet
network, *NOT* the Internet. If you attempt to send Internet mail to
this address, and use the old .NA suffix instead of the new .NOAM
suffix, it will get routed to Nimibia (Internet suffix .na) which is
currently paying a lot of money for misdirected ham mail. Help
maintain a positive example for amateur radio and please do not
attempt this!

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

** Where can I find modifications for my radio to extend its capabilities?
Some mods can be found on wsmr-simtel20.army.mil or
the Simtel20 mirror directories on wuarchive.wustl.edu.

There is a new server at pcserver@novell.business.uwo.ca. Some
examples of main body email requests are as follows:
HELP
SENDME RADIO MODS
SENDME TH215 MODS
SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send
a packet as follows:

SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work.

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
preferably a driver's license, passport or visa; and the VE test
fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a
definitive listing of VE exams indexed by state (and some overseas
sites, usually at embassies and military bases) to the net every 6
weeks or so.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above,
substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
ARRL publications (i.e. conference proceedings, repeater directory)
and more...

Except for the Callbook (via callsign servers), these are not available
because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work.
Also, not everyone that has information has reliable UseNet access.

In one example of someone's effort to bridge the information gap, there
is a new repeater-mapping project which can automatically accept
entries via e-mail. If you can get enough details about a repeater
for a complete listing, you may want to help by submitting an entry.
For more information, use the following e-mail addresses:

repeaters@wattres.sj.ca.us
Just send a message with only the word "help" in the message
body. The project's software will reply with instructions.
steve@wattres.sj.ca.us
For other questions (Steve Watt KD6GGD)

As soon as the list is big enough to be useful, the project will make
it available electronically. That will mean one less "why isn't it

available electronically" question for the net.

275. rec.radio.amateur.misc Frequently Asked Questions (Part 4 of 6)

Newsgroup: rec.radio.amateur.misc

Rec.radio.amateur.misc Frequently Asked Questions
Part 4 - Amateur Radio Organizations and Publications
------------------------------------------------------------------------------

Questions discussed in Part 4: (dates indicate last modification)
** How do I use the incoming and outgoing QSL bureau? (pre-4/92)
** Anyone know anything about the QSL Post Office? (pre-4/92)
** Are there any news groups for CAP? (5/92)
** What's the name of the QRP club that issues QRP numbers? (pre-4/92)
** Can I send ARRL or W5YI electronic mail? (6/92)
** "Why doesn't the ARRL do...?" (4/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I become a 10-10 member? (pre-4/92)
** How do I join MARS? (pre-4/92)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (pre-4/92)
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
allocations and question pools? (5/92)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 4--

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label
off of your QST magazine (which shows ARRL membership), along with
$2 per pound of cards (approximately 150 cards) or $1 for 10 cards
or less.

To use the incoming QSL bureau, you do NOT have to be a member of
ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7
or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached
and with your callsign in 3/4" letters in top left hand corner where
the return address label would go. If you expect a large quantity
of foreign QSL cards, attach extra money or postage with a paper
clip; do NOT affix extra postage to envelope. Send the envelopes to
the QSL bureau for your callsign area. If your callsign is xx3xxx/5,
you would send it to the 3rd call area, NOT the 5th call area.
```

Addresses for QSL bureaus are listed in QST (and below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for US Incoming QSL Bureaus:
USA 1 - W1 QSL Bureau, Box 216, Forest Park Stn, Springfield, MA 01108
USA 2 - ARRL 2nd District QSL Bureau NJDXA, POB 599, Morris Plains, NJ 07950
USA 3 - C-CARS, POB 448, New Kingstown, PA 17072-0448
USA 4 - All single-letter prefixes ONLY
Mecklenburg Amateur Radio Club, POB DX, Charlotte, NC 28220
others:Sterling Park Amateur Radio Club, Call Box 599, Sterling Park, VA 22170
USA 5 - ARRL 5th District DX QSL Bureau, POB 50625, Midland, TX 79701
USA 6 - ARRL 6th District DX QQSL Bureau, POB 1460, Sun Valley, CA 91352
USA 7 - Willamette Valley DX Club, POB 555, Portland, OR 97207
USA 8 - 8th Area QSL Bureau, POB 182165, Columbus, OH 43218-2165
USA 9 - Northern Illinois DX assn, Box 519, Elmhurst, IL 60126
USA 0 - W0 QSL Bureau, Ak-Sar-Ben Radio Club, POB 291, Omaha, NE 68101
Hawaii- Wayne Jones NH6GJ, POB 788, Wahiawa, HI 96786
Alaska- Alaska QSL Bureau, 4304 Garfield St, Anchorage, AK 99503

** Anyone know anything about the QSL Post Office?
The QSL Post Office is a private venture who also supplies QSL service as long as you let them put their advertisements in the envelopes. You can keep a SASE there in case you get cards returned via the QSLPO.

Instructions:
Send multiples of 10 QSL cards with check, cash or money order ($1 for each 10 cards).
Do not put postage on the cards.
Do not place cards in individual envelopes
Write callsign only in address area, or address as well if it's different from callbook.
Send to:
QSL Post Office
767 South Xenon Court, #117
Lakewood, CO 90228
303-987-9442

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net, using the
address username@arrl.org, replace username as shown below:

Jon Bloom, KE3Z, Laboratory Supervisor jbloom
(arrl.org postmaster)
Steve Ford, WB8IMY, Assistant Technical Editor sford
(Operating Manual, packet and satellite books)
Mike Gruber, WA1SVF, Laboratory Engineer mgruber
(product testing)
Jerry Hall, K1TD, Associate Technical Editor jhall
(Antenna books, propagation)
Ed Hare, KA1CV, Senior Laboratory Engineer (RFI) ehare
Rus Healy, NJ2L, QST Assistant Technical Editor rhealy
(Product Review)
Luck Hurder, KY1T, Field Services Dept. Deputy Manager lhurder
(Clubs, Field Organization)
Chuck Hutchinson, K8CH, Membershipship Services Manager chutch
(Contests, awards, DXCC etc.)
Bart Jahnke, KB9NM, Volunteer Examiner Dept. Manager bjahnke
(Exams, VE coordination, etc.)
Jim Kearman, KR1S, Assistant Technical Editor jkearman
(license manuals)
Joel Kleinman, N1BKE, Associate Technical Editor jkleinma
(in charge of editing technical books)
Zack Lau, KH6CP, Laboratory Engineer zlau
(RF/microwave circuit design, QRP)
Steve Mansfield, Public Relations Manager smansfie
(news stories, etc.)
Dave Newkirk, WJ1Z, QST Senior Assistant Tech. Editor dnewkirk
(Hints & Kinks)
Paul Pagel, N1FB, QST Associate Technical Editor ppagel
(in charge of QST technical editing, Technical Correspondence)
Rick Palm, K1CE, Field Services Manager rpalm
(Field Organization matters)
Bob Schetgen, KU7G, Assistant Technical Editor rschetge
(Handbook)
Barry Shelley, Chief Financial Officer bshelley
Dave Sumner, K1ZZ, Executive Vice President dsumner
(policy matters, HQ administration)
Rosalie White, WA1STO, Educational Activitied Dept. Mgr. rwhite
(info on becoming a ham/training/SAREX)
Mark Wilson, AA2Z, QST Managing Editor mwilson
Larry Wolfgang, WR1B, Senior Assistant lwolfgan
Technical Editor (Beginner's books)
Tammy-Beth Zimmerman, KA1WWP, Membership tzimmer
Services Administrative Assistant
(DXCC, awards, QSL buro)

The Washington Area Coordinator for the ARRL, Perry Williams W1UED (sort of our "lobbyist" to the FCC and Congress) has mcimail access at 2242662@mcimail.com.

Other mail addresses at ARRL:
Technical Information Service tis@arrl.org
(technical questions)
DXCC dxcc@arrl.org
Awards (WAS, etc.) awards@arrl.org
Contests contests@arrl.org
Outgoing QSL Bureau buro@arrl.org
W1AW 76067.3724@compuserve.com

For other questions (ARRL policy issues, etc.), try 2155052@mcimail.com, which sends them to the front office.

ARRL requests that you include your postal address (the slow kind) in case they need to send you nonelectronic material in answer to your request.

Other useful addresses:
Tom Frenaye, K1KI, Vice President 2349723@mcimail.com
Frank Butler, W4RH, Southeastern Division 3113659@mcimail.com
Director
Stan Horzepa, WA1LOU, QST (Packet horzepa@gdc.com
Perspective) and QEX (Gateway)
columnist
Fred Maia, W5YI, another large VEC 3511297@mcimail.com.

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a concerned member (or, actually, any concerned Ham) carries a lot more weight than hearsay from any source. The e-mail addresses are listed above. They want direct input - that's what those addresses are for.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
TIC/DLTXM
Scott AFB, ILL 62225-6001
(618) 256-5552. Or, contact via Internet goes to
__daniels@server.af.mil, put "Pass to MSgt Trimmer" in subject line.

Chief, Army MARS
HQ, US Army Information Systems Command
ATTN: AS-OPS-OA
Fort Huachuca, AZ 85613-5000

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency.
The Radio Amateur Civil Emergency Service is a part of a municipal,
county, or state government. This does not mean, however, that
every such government has a RACES program. If your government does
not have a RACES, ask them to refer you to the nearest jurisdiction
that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it
thru 2155052@mcimail.com) and a book called "The ARRL Plan for the
Disabled", available at no charge from the ARRL Regulatory
Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try
directory assistance from the phone company or the locator service
provided by the Salvation Army. A Salvation Army post in your
local area may be able to help you. If you have his/her callsign
or name, you might also try one of the on-line callservers shown
above. Also, the Quarter-Century Wireless Assn maintains a collection
of callbooks going back to "the beginning of time". Their address
is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a
dial-in line for accessing new ham callsigns. Try (1-708-234-8011)
at 2400 baud.

** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
** allocations or question pools?
Part 97 is available by ftp from several locations:
Western US
caticsuf.cati.csufresno.edu /pub/ham-radio/radio/info/part97.txt
Central US
pacific.mps.ohio-state.edu /msdos/ham/part97.arc
Eastern US
gandalf.umcs.maine.edu /pub/ham-radio/part97.txt
ftp.uu.net /networking/ka9q/part97.arc
The *.arc files are MSDOS ARC files with the same ASCII text.

An ASCII copy of the question pools are available by ftp from
uxc.cso.uiuc.edu (128.174.5.50) in /pub/ham-radio/<class>-pool.txt.Z,
where <class> is novice, technician, general, advanced or extra.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive

these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

Rec.radio.amateur.misc Frequently Asked Questions
Part 5 - Common Advanced and Technical questions
------------------------------------------------------------------------------

Questions discussed in Part 5: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** I'm confused. What do all those abbreviations mean??? (5/92)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(4/92)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (pre-4/92)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (pre-4/92)
** I got TVI...HELP!!! (pre-4/92)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies does JPL and GSFC retransmit the shuttle audio?
(5/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** How do I modify my current Amateur license? (4/92)
** I'm confused about XXX, should I ask the FCC? (new 4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 5--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
```

tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version
of RTTY. Also used commercially as SITOR (Simplex Teleprinter
Over Radio).
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for
downed aircraft and missing kids and uses frequencies just
outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"

QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a
reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
Write to the ARRL and ask. They can usually tell you how to get a
license in your country.

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send

it to hamradio-faq@uts.amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
** country or if I am a FCC licensed ham who wants to operate in another
** country (on vacation)?
You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and

time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.
* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies does JPL and GSFC retransmit the shuttle audio?
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860

W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN 145.46
KA9SZX 146.88 426.25

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?

Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** What is the standard for measuring Morse code speed?

The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location, change of name, renewal, or even change of callsign), submit an FCC Form 610 to the FCC. Forms are available from the FCC or ARRL or a local VE session or ham radio store. Do NOT use a photocopy. Check off the appropriate boxes, fill in the new/changed information, SIGN THE FORM, and attach a copy of your current license (or a brief letter of explanation for its absence, ie, "my dog ate it"). NOTE: If you check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

** I'm confused about XXX, should I ask the FCC?
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion

the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

Rec.radio.amateur.misc Frequently Asked Questions
Part 6 - Special Topics in Amateur Radio questions
------------------------------------------------------------------------------

Questions discussed in Part 6: (dates indicate last modification)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (pre-4/92)
** What do I need to get started in packet radio? (5/92)
** What do I need to get started in satellite communications? (pre-4/92)
** What is available to get started in ATV, SSTV and WEFAX? (5/92)
** What are these contests I sometimes hear, and how do I participate? (7/92)

--Rec.radio.amateur.misc Frequently-asked Questions-----------------Part 6--

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 -
old radios, TVs, ham equipment, 40s and 50s radios,
telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q,
Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb,
NY 14469 - sponsors the Wireless Museum
See also the info on antique-radios mailing list in FAQ 2.

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112
(10504-524-2343)

** What do I need to get started in packet radio?
Packet radio is a digital form of communication using radios. There
are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use
packet radio, you'll need a radio (2 meters and 70 centimeters are
most popular), a box that converts radio signals to digital signals
that a computer can understand (called a TNC or terminal node control-
ler) and a computer or terminal. For some computers or TNCs you may
need special software as well. However, most TNCs and computers get
along quite well with just a terminal emulator software package. Most
```

personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.packet newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 3.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

** What do I need to get started in satellite communications?
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (If you don't have Internet access, see Part 3 for instructions on the FTP mail server.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?

Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to

the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

278. Re: Envelopes for Incoming QSL Buro 5 x 7.5 ???

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 11:47:35 UTC
From: dls@genrad.com
Message-ID: <1992Jul7.114735.25476@genrad.com>
Source record: 287765

In article <932@tekgen.bv.tek.com> brucec@tekgen.bv.tek.com (Bruce Cheney) writes:
>All the instructions I've seen so far for incoming
>QSL Bureaus in the US request that you send them
>SASE's that are 5 x 7.5 inches. So I looked for
>envelopes this size and so far haven't found any!

I am a sorter and can tell you there is a reason behind the logic of the
size of envelopes. However, I don't think 5 x 7.5 is a hard and fast size.
It is important that the envelopes be large enough to hold most QSL cards.
The small personal envelopes ARE NOT LARGE ENOUGH EVER. A business sized
envelope is barely large enough for most QSL cards, and is NOT large enough
(tall enough) for many of the foreign QSL cards that I sort. There is a size
of "business sized" that is about 1/4 inch taller than standard business
sized. These ARE large enough....if you can find them.

As for too large, now we run into a different problem. The postal service
requires a SURCHARGE on 1 ounce of postage if the envelope is larger than
a specific size (approx 6 1/4 x 9 1/2"). And most hams get rather IRRITATED
when they receive only 1 ounce of cards, but have to pay an extra 10 cents
in postage, cuz their envelopes are too large. Another thing to consider:
the box that we store the envelopes in don't handle envelopes larger than about
6 x 9 without folding them.

So, the bottom line is: Use an envelope that is sized :
4.5-6" x 6-9" NO BIGGER, NO SMALLER
The number 6 envelopes (or envelopes that come with greeting cards) are
ideal for this, if you want a small envelope. Or, 6 x 9 manila envelopes
work fine. Or, there are 5 x 7 manila envelopes which are quite popular.
DON'T USE PERSONAL ENVELOPES (3 3/4 x 6 1/2) OR BUSINESS SIZED ENVELOPES
(4 1/4 x 9 1/2) and DON'T USE THE LARGE MANILA ENVELOPES (7 x 10 or 9 x 12).

Just for your information, here's the postcard which I send to hams to
inform them of their status or let them know they have QSL cards:

O Status: __ stamps __ envelopes __ cash __ oz QSL cards
O You have foreign QSL cards on file at W1 Bureau.
O Please send a SASE with ___ postage, PLUS the cost of
this notification (.19c).
O Please send more envelopes/stamps/cash (up to $5)to update
your account.
O If we do not hear from you within 45 DAYS, the QSL cards
(and any future foreign QSL cards) will be destroyed.

* BE PATIENT. Response time for Bureau is about 3 months.
* DO NOT AFFIX MORE THAN ONE OUNCE OF POSTAGE TO ENVELOPE!
* Paperclip extra postage if desired.

* SASE size: 4.5-6" x 6-9", NO BIGGER, NO SMALLER.
* For more information concerning the W1 Incoming QSL
Bureau, refer to your QST magazine. Or, information
may be requested by a note and a business size SASE.

Hope this helps.

The Sussex County Amateur Radio Club is hosting its 14th Annual Hamfest.
Date: Sunday, July 12, 1992 Starts 8:00 AM
Location: Sussex County Fairgrounds - Plains Road off Rt. 206, Augusta, N.J.
Talk-In 147.90/30 or 222.90/224.50 or 146.52 Simplex
See you at the SCARC '92 Hamfest!

280. Manual for MFJ-752C "Signal Enhancer II"?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 12:13:31 UTC
From: morris@ucunix.san.uc.edu

Still looking for a manual or at least the schematic for an MFJ-752C "Signal Enhancer II" model audio filter. I've got it working somewhat, but can't help but think the fried resistor the guy at Dayton hid from me is affecting performance!@#$@%!

Would like to at least get the schematic to check the resistor value--burned to a crisp, it is unidentifiable.

Thanks--will pay photocopy/mailing, or what might I have you want? (Old tubes?)

Theodore Allan (Ted) Morris, University of Cincinnati Medical Center, 513-558-0177V, 558-0758F, MORRIS@UCUNIX.SAN.UC.EDU, MORRISTA@UC.EDU, NTS WB8VNV. Call me up and I'll talk data to ya!

281. WANTED: Morse code program for a MAC LC

I am planning to take my RV to the Outer Banks this week end; July 10,
11, & 12. I will be on the air as K4PB/NA67 operating from Hatteras
Island. I know this is short notice. I don't plan ahead much. I
will be using an Cushcraft R7 antenna.

Oh yeh this gasping geezer will be operating CW.

Indeed, I private emailed for additional information. The reply
was fine, and indicated that the ham community was prepared to
take the indivudual to task with the FCC. However, I want to
repeat your post...RADIO SHACK WILL NOT TOLERATE ILLEGAL
ACTIVITIES BY ONE OF OUR EMPLOYEES! Anyone wishing to
pass on any activity of this sort can either contact
the appropriate District Manager or can email me and I
will pass the info on to an appropriate person. For the
name and phone number of the District Manager, call
817-390-3011 and ask the switchboard operator.

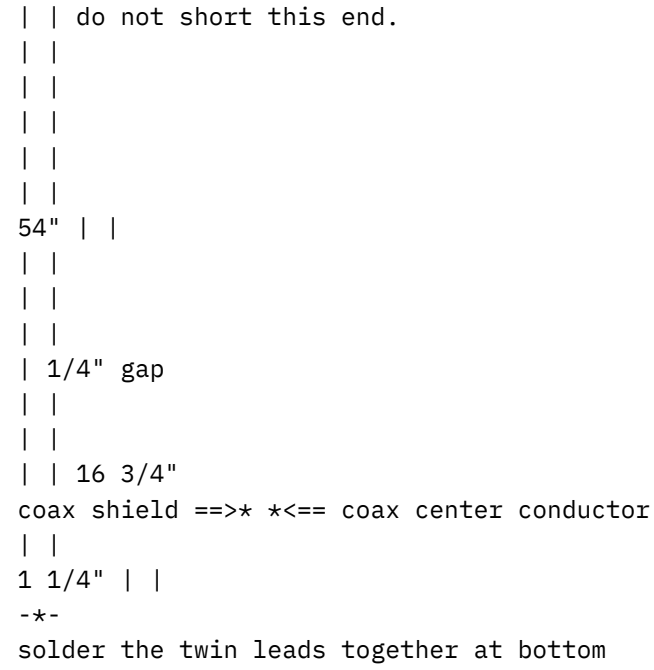
>what lengths? and what connects to what? is it hard to tune?
>I intend to use it for 2m with my HT (alinco DJ580T)
>(or make another one for 440, is is possible to have a dual band

I seem to recall hearing about a bual band version. Below for all and sundry is the standard antenna. This thing seems to have originated from the Downey Amateur Radio Club (DARC), not to ne confused with the German National organisation with the same initials.

The following is a description of a J-Pole antenna made from 300 ohm TV twin-lead. Quite a few of the hams in the area have successfully built one or more of these antennas. They have quite a few advantages which include improved performance for 2-meter HTs, portability, and last, but never least, they are inexpensive.



1. Start with 54 1/2" of TV twin lead
(foam core does not work as well)
2. Strip 1/2" of insulation at bottom and solder wires
together.
3. Measure 1 1/4" from soldered wires and strip insulation on
both sides. This is the solder point for a coax feedline.
4. Measure 16 3/4" from bottom and cut out 1/4" notch
on one side.
5. Feed with a length of RG58U coax. Tape coax at feedpoint
to the twin lead for strength and weather protection.

I have also attached an aligator clip to the plastic on the top
of the antenna in order to conveniently hang it. I am
successfully using one in my attic to avoid any CCNR problems. I
have another that I can take with me camping, sailing, etc.

This design has appeared on many BBSs and in club newsletters; the
earliest reference that I know of is a Jan. 1984 D.A.R.C. antenna
article by James Burks, KA5QYV.

I agree. My question is: Is there popular support. Do enough of us want to see this changed badly enough to bother petitioning the comission for a rule change. Anyone want to join in the effort?

And I'm still wondering just what other administrations require as far as ID is concerned. I can't recall ever hearing DX ops working in a language not native to the licensing country revert to the local dialect for ID purposes.

>they can do about it, nor will they get involved to stop these guys from QSOing
>with the bootleggers that float up from 11 m and the "freeband" !!

Erik, do you understand what you're hearing on the air? First there's the junk that's "out of place", SSB way down in the CW portions of 10. It's all freeband type junk. You're not talking about FCC licensed amateurs here so ID is not the issue here, its the overall legality of the operation. If these jokers were licensed, the language used for ID would be quite secondary to the issue of out of band operation. Then there are the for real hams on 10m. If you could understand these guys when they ID, you'd understand that they are mostly DX and don't have to ID in English. So what does all this have to do with the language used for giving exams to people interested in legit & legal ham radio? Not much.

> English is the Official Language of the State of California, by Law. Therefore
>the tests here had better be in English...besides who would really benefit from

>a change to this? Would it make life nicer for the majority of the Amateur ranks?? NO! It just makes it easier for a small minority that cannot seem to learn
>to speak the official language...what next?! It's bad enough the buggers don't
>have to know enough English to pass their driver's license tests...just try to
>get a license in Mexico...they WON'T give you a test in ENGLISH!

As for this paragraph, I wholly second the remarks in response already posted by Phil Karn under the same subject.

>`

I am with Patty. I fought very hard along with Phil and Tom Clark to get AMSAT and TAPR on public record as behind a no code license. Following this and other agitation, the ARRL formed the `Wilson committee.' History has recorded well what has followed. By almost all accounts, no-code is a `success' in that it has brought in significant new numbers, and has not been the disaster on 2 meters many predicted. I think most people think of me as a computer nerd, basement wizard, or whatever. That being said, when I operate, it is almost exclusively MORSE. I work 40 CW just about every night. This current business of insulting people with calling it Morris serves no useful purpose at all. I can assure you, that I am indeed personally insulted by it. This hobby is big enough to tolerate a large number of different interests and beliefs about operating interests and I would like to see that exercise begun here. Enough with the insults already.

Bob

>Therefore the tests here had better be in English...

Last time I checked, in our country Federal laws and rules preempt those of the states. So California's ill-conceived "English only" law is completely irrelevant to the FCC. And it would probably be found to violate the US Constitution if it were ever seriously tested in court. (See the First and Fourteenth Amendments.)

The law can never be tested in court as it's impossible to violate it. It simply states that English is California's Official State Language. There are no California laws which require the use of the Official State Language or prohibit the use of unofficial ones. Similarly, the California Official State Flower is the poppy, but that doesn't mean you have to grow poppies, or that it's illegal to plant begonias.

From: brucec@tekgen.bv.tek.com
Message-ID: <952@tekgen.bv.tek.com>
Source record: 287775

I have just received the latest Incoming QSL instructions from the ARRL. I am relieved to note that they now list TWO official size envelopes: the rare, obscure, and expensive 5 x 7.5 and the common, pedestrian, and cheap 6 x 9. The email and followups were VERY instructive; especially from those who volunteer their time at the QSL bureaus. Thank you for the work that you do to make this hobby enjoyable and affordable.

294. Lightning protection devices from Radio Shack

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 15:46:24 UTC
From: ml@hydra.carleton.ca
Message-ID: <1992Jul7.154624.332@cunews.carleton.ca>
Source record: 287771

I recently had occasion to purchase lightning protection for my 2M
A144-7 YAGI and related equipment. I decided to get one from the
store I purchsed the antenna from, so I got a Cushcraft LAC-4H.
This item cost me about C$55.00. I thought that was a bit much,
but given my limited time budget, I figured it was worth it.

A few days later, I happened to be in a Radio Shack making an "emergency"
connector purhcase, when I noticed that they had a lightning protection
device for C$25.95. Hmmm, I thought, maybe I should put protection on
my 6M and 1.25M systems as well. So I bought a pair.

The LAC-4H came with *no* instructions [not that I needed any, mind you], and
no specifications sheet. The LAC-4H also has to be waterproofed by the
user.

The Radio Shack protector comes with a spec sheet, complete with VSWR graphs
from DC to 1.5GHZ, as well as power ratings across that spectrum. It gives
you detailed directions about how to install it, and also *where*. The unit
is *substantially* better constructed than the LAC-4H, and needs no special
waterproofing itself (though you still need to rubber-tape over the
connectors).

It seems that hams tend to get suckered into paying more for "official"
ham-radio devices, that may or may not be of comparable quality to their
more generic counterparts. It also has struck me, over the last couple
of years, that the traditional bashing of Radio Shack as a vendor of
crap isn't a universal truth...

I can't resist this. On one of the other news groups, somebody wanted
to use a serial port as a mouse port. It's too bad I lost their address
or I could just tell them to take out that stupid circuit board which
blocks the opening.
In all seriousness, the urine dousing which randomly hit the IC's
and circuit-board traces probably formed a very low-resistance path, at
times, and may have actually destroyed some components.

Date: 1992-07-07 16:34:10 UTC
From: brad@bach.udel.edu
Message-ID: <Br120y.FGn@news.udel.edu>
Source record: 287776

I recently purchased an Icom 2SRA. I was wondering what mods are available,
and how to obtain them. (I have checked some FTP sites -- nothing)

I suppose that there is an out of band mod and an extended receive for
the "transceiver" part of the radio.

I was also wondering if there is any way to use squelch decoding to
decode DTMP codes. Also wondering how to find out the sub-audible
tone for a particular user (ex: businesses sharing a common system)
besides programmming every memory channel with the same freq, differnet
code.

thanks

>figure that a whole receiver/transmitter pair would be
>something I'd like to read up on first (especially if I
>don't use a PC board).

ARRL offers a number of books on the subject:

QRP Classics (anthology of QST articles on QRP transmitters,
receivers and accessories; newest printing includes
the ever-popular 'Optimized QRP Transceiver' by
Roy Lewallen, W7EL.)

W1FB's QRP Notebook (collection of receiver/transmitter/
accessory circuits by Doug DeMaw)

W1FB's Design Notebook (oriented more toward designing your
own stuff, but lots of circuits and construction
suggestions)

Solid State Design, by Wes Hayward, W7ZOI and Doug DeMaw.
(a little long in the tooth [pub in 1976] but
still very popular. Modest theory and lots of
construction ideas. Still worth having)

You may be able to buy these books locally, from a store
that sells ham gear. If not, e-mail to me (jkearman@arrl.org)
and I'll give you the info you need to order.

The Optimized QRP Transceiver and a derivative design that
be a little easier to build, The Ugly Weekender (by Roger
Hayward--that family loves to build equipment) appear in
the 1992 ARRL Handbook, which your library may have. The Ugly
Weekender was named after the ground-plane or "ugly"
construction method. I build all my gear this way; it's
easy and it works better than a PC board. By the way, both
rigs are for 40-meter CW (Puleeze--no flames about this!!!).

A number of companies stepped into the void when Heathkit stopped making the HW-9 QRP transceiver. I just know I'll overlook someone (my asbestos suit's at the cleaners)if I give a list, so I'll refer you to the display and classified ads in QST magazine.

QRP homebrewing and operating are about as much fun as you can have standing or sitting. Good luck and 73.

Ed made some very good points in his post about the lamp dimmers.

To add to that, a similar device is often used to control the speed
of ceiling fans, and is often sold side-by-side with the dimmers.
These things may also create some noise, so watch for them as well.

Mark, enthusiasm is what keeps this gasping geezer going! Welcome!
I'll leave discussion of your antenna to others; the Ten American
Districts Award is issued by:

Lockheed Employees Recreation Club
2814 Empire Blvd
Burbank, CA 91504

Our information (which appears in "Now You're Talking!" says
you should enclose $1 with your application.

Your question on the hardest state to get will certainly stir
things up! The last state I confirmed was Louisiana, believe
it or not! The Sweepstakes contest is a good place to rack up
new states, by the way. When writing for a QSL card, be sure
to enclose a stamped, return envelope. Some folks just don't
QSL, or do it slowly, or get your call wrong.... My South
Dakota on 80 meters card was made out to K1RS. After waiting
for a year.....well, you get the idea!

Have fun! 73.

I built up a dual-band jobbie (for use with the PACSATS) and as far
as I can tell, it probably would've set me back about six bucks,
exclusive of the feedline.

You can find it clearly written up in the ARRL Handbook and the
Satellite Experimenter's Handbook. And several AMSAT pubs as
well.

It's an excellent antenna and for a mechanical/technical ZERO
like myself, surprisingly simple to toss together...

I recently called several vendors that were in a recent 73 magazine.

I rcv'd catalogs in less than a week from 4 of them. They all had complete kits for several types of QRP HF rigs. (from DC rcvrs to full superhet xcvrs)

The two that I remember are:
Radiokit
Oak Hills Research

One other sells british kits.

Ramsey has some very low end (price and performance) HF CW kits.

Hope this helps!

>the fact is the ONLY group that is pressuring for this is the Mexicans!

Where do you get this information? Are you just presuming it (like I am since I don't have any facts about it) strictly on the basis that Mexicans are (probably) the largest minority of citizens of the US who have a very distinct language of their own?

> Very BAD idea! We have enough problems with "island subcultures" now..just
>imagine the nightmare of a whole cult that didn't even have to speak English
>to *get* their licenses...the ARRL had better do something to stop this one!

It isn't the ARRL's place to control which culture is to be supported in the United States, or among the ham population thereof.

> 10 meters is awash with L.A./Ca. Hispanics that refuse to ID in English..dumb
>bastards! Oh, and check this out: Our OO's all claim that there is nothing
>that they can do about it, nor will they get involved to stop these guys from
>QSOing with the bootleggers that float up from 11 m and the "freeband" !!

If they refuse to ID in English, there might be many reasons, perhaps none of which are justified, but the fact that it goes on has nothing to do with whether or not examinations may be given in a language other than English.

Maybe some are in fact ID-ing in English, bit with an accent that makes you think it is in some other language.

> English is the Official Language of the State of California, by Law.
>Therefore the tests here had better be in English...besides who would really
>benefit from a change to this? Would it make life nicer for the majority of
>the Amateur ranks?? NO! It just makes it easier for a small minority that
>cannot seem to learn to speak the official language...what next?! It's bad
>enough the buggers don't have to know enough English to pass their driver's
>license tests...just try to get a license in Mexico...they WON'T give you a
>test in ENGLISH!

I had to edit your text because you didn't insert newlines in the appropriate places. So get YOUR act together and use NORMAL lines of text like the rest of us.

Does Kalifornia's English-only law forbid the use of any language but English in everything? Won't that put the Spanish, Japanese, Korean, and other language TV and radio programming off the air? Won't that stop the presses of foreign language newspapers printed in Kalifornia.

Is Kalifornia's law really as restrictive as the stupid "French Only"
laws in Quebec?

Who cares what a legally-constipated state outlaws anyway. Kalifornia
is almost as bad as Nazi Jersey.

Three summers ago I was at Cornell for a two week seminar. I saw the antennas and inquired at the student union or some such information center and they promptly directed me to the president of the club.

For $5 I got a key and the use of the station for two weeks. Except for the long climb to the station, it was a wonderful experience at Cornell.

I suggest that the student be more resourceful!

> of different interests and beliefs about operating interests and I
> would like to see that exercise begun here. Enough with the insults already.

I can see Julian's point. I'm sick and tired of people telling me that
the Morse code requirement "sifts out the riff-raff". This is an elitist
and naive point of view. Morse code did not prevent jamming and poor
operating for years. Like any restrictive law, it primarily impacts the
law-abiding. I've heard a large number of ludicrously ridiculous arguments
about how one's life could be saved by knowing Morse code. Few of them
are rooted in reality.

I am a strong proponent of a codeless license, which we now have, and
also am a strong proponent of simplifying the existing licensing to
require only a single Morse test for all HF privileges. The single
Morse code test would be a moderate speed, such as 5-10 WPM, and would
insure compliance with the IARU convention.

This all said, let me strongly state I agree emphatically with Patty
and Bob. I like CW, and I dislike CW bigotry of any kind. I refuse
to use the terms "No-Code" or "No Coder" in referring to Technicians.
Afterall, do we refer to Generals as "No-Extra-Theory" operators? Of
course not. Code is just one mode among many to be enjoyed; it happens
to be an old mode, and therefore has been encapsulated in the IARU
regulations. Someday, that may change. What will I propose then? I'll
propose the elimination of Morse code as a license requirement.

I've just uploaded sortham.readme and sortham.lzh to
amiga.physik.unizh.ch.
This is version 1 by me. The program takes an input text file
and creates and output text file. It assumes an amateur radio
call sign starting in the first column of each line and sorts it
all in memory. It sorts the lines in the same order as found in
the ham radio call books.

Binary and source are included. It was written in C and compiled
under Manx's Aztec V2.4a under AmigaDos 2.04 (I don't think it has
any AmigaDos release dependancys).

Sent compliments to me, complaints to NIL:

323. An old kid with a new toy

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-07 22:15:52 UTC
From: dube@cpdvax.CSc.ti.COM
Message-ID: <199207072214.AA15990@tilde.csc.ti.com>
Source record: 287597

I just finished my first AMTOR QSO. I didn't know what I had been missing. Having recently purchased a KAM TNC, I hesitantly started out with CW. I was amazed at the ease with which I could communicate as the intermediary between the screen and keyboard. (Yes, I'll still play with the Vibroplex sideswiper, because it's still like a toy) Most of my CW contacts from now on will be with the computer though.

Next I got braver. After "listening" (is that the right word?) to AMTOR for a few days, I finally put out a CQ. I thought I could detect, aurally, someone trying to respond, but nothing showed on the screen. Finally, a link! It was almost as exciting as my very first Ham QSO! I sat amazed as the old TS-820 keyed and unkeyed rapidly in response to the TNC's commands while we exchanged our comments via the keyboard. Next: RTTY! Then some VHF Packet! Ain't Ham radio fun?

If your asking about the callbook available through the Internet, try telneting to:
telnet marvin.cs.buffalo.edu 2000

this is totally interactive, but it's been a while since I've used it so I don't recall how to use it.

325. Willow Run Airshow Summary

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-08 00:57:46 UTC
From: sdkuo@argo.acs.oakland.edu
Message-ID: <1992Jul8.005746.19620@vela.acs.oakland.edu>
Source record: 287609
Cross-posted to: mi.misc,ou.general,rec.radio.amateur.misc,alt.radio.scanner

This post is long, skip till the end if you only want the frequencies.

Every year Willow Run airport in Michigan holds the Air Michigan airshow. This year was my first year to attend. Myself (N8OPH) and KF8OH headed down there with a PRO-2006, Optoelectronics 2810 frequency counter, and an Icom 24AT. The first thing we did is program and monitor the tower and ground frequency as found in the Detroit VFR TCA chart (available at any small airport for under $5). These frequencies at first seemed dead. Show coordination was not heard here. So the next step was to get out the frequency counter (FC). Within a minute it locked onto 122.95, we tuned the 24AT to 122.95 and heard nothing. Tuning the 24AT up and down we found that the action was on 122.93, the FC was close. Using the same procedure we also found 153.18, 153.14, 159.48, and 160.365. Our scanning action immediately improved. We could hear what (airplane) was next, what was going on, etc.. When Team America (3 formation planes) flew, we couldn't hear any of the talk between the three. Using the FC showed short burst of signal around 135, but it was too quick to get a sold lock. No problem, I set the PRO-2006 to scan between 135-136 and we instantly found their stunt coordination on 135.975. This was great to listen to. You could hear the team leader telling the rest when to break up, turn around, etc..

In general, the frequency counter was very valuable. I was very surprised how good it worked. In the city it works like crap. It can't pick up 800 MHz at all, 440 is okay while 2 meter is good. But at the airport (away from the city) it worked good. Without it we would have never found the primary show frequency (which is where all the action was). While the FC didn't always give a sold lock, using the 24AT and turning the dial yielded the correct frequency (with in a few 100 KHz). Summarizing this airshow, I would recommend the following items for any airshow monitoring:

- VFR sectional (to get the basic airport frequencies)
- Scanner capable of VHF and UHF airband.
- Frequency counter.
- Another receiving device with a tunable dial (any ham HT capable of airband) to fine tune to the exact frequencie found on the FC.
- Paper and pencil (you want to write new frequencies down before you forget them!).

The following is a summary of the frequencies we used and found
at the Willow Run Airshow.
Tower: 120.0 (heard the 747 arrive & depart here)
351.7 (heard the F-117A Stealth arrive & depart)
Ground: 121.9
Show Coord: 122.93 (this is where all the action was)
Local Stuff: 153.18 (local show control, hot)
153.14 159.48 160.365
Team America: 135.975 (AM, this is still airband)
Also try 123.40 and 123.45, we didn't hear anything here but I've
been told these are active at other shows.

Feel free to contact me for questions and comments.

Steve Kuo, N8OPH, sdkuo@argo.acs.oakland.edu

Actually, I have heard of cases where state civil servants in
California have been disciplined for speaking Spanish to each other or
to Spanish- speaking members of the public while on duty. The
"official English" law was specifically cited.

Hello , OM.

I'm looking for 7plus.exe for MS-dos. It is very useful CODEC
for exchange programs through RLI/MBL network.
Please let me know where has anonymous FTP site to get newer one.

Thank you in advance. 73

It's moved to callsign.cs.buffalo.edu. Still port 2000. Only individual
licensees there however, no club stations.

After recommendations on the net plus a good review in May 92 QST i bought the Oakhills Research QRP 20.

Went together ok and worked first time, I like the receiver as its a single conversion not a direct conversion. Stability is ok after 15 minutes warmup but as I do'nt turn it off very often thats not a problem.Took it to field and ran it with solar cells for the extra points.

333. Daily Solar Geophysical Data Broadcast for 06 July

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-08 04:09:39 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.710568579@honte>
Source record: 287616
Cross-posted to: sci.astro,rec.radio.amateur.misc,rec.radio.shortwave

NOTE: A MALFUNCTIONING PIECE OF CRITICAL EQUIPMENT PREVENTED THE CALCULATION
OF NUMEROUS VALUES BELOW. WE HAVE SUCCESSFULLY ISOLATED THE PROBLEM
AND _MAY_ HAVE DEVISED A TEMPORARY SOLUTION TO THE PROBLEM UNTIL A
REPLACEMENT CAN BE INSTALLED. WE APOLOGIZE FOR ANY INCONVENIENCE THIS
MAY BE CAUSING.

THE GIVEN MINIMUM AND AVERAGE X-RAY FLUX VALUES ARE INVALID. THE
GIVEN MAXIMUM X-RAY FLUX AND MOST OTHER LISTED VALUES ARE CORRECT,
EXCEPT THE FIRST SIX FORECAST K-INDEX VALUES AND THE GOES-6 & GOES-7
GEOMAGNETIC PARAMETERS.

>It's moved to callsign.cs.buffalo.edu. Still port 2000. Only individual
>licensees there however, no club stations.

The callbook will always be available at the address callsign.cs.buffalo.edu
on port 2000. (callsign.cs... is an alias for a machine here on campus.)
callsign.cs... is currently aliased to 128.205.32.2.

PLEASE use the alias callsign.cs.buffalo.edu if you can. If that doesn't
work on your host, then use the IP address.

I've been a broadcast engineer for 10 years and when ever I build a gadget to use around the station...I always try to design it around Radio Shack Parts..That way if it gets broken or blown up or worn out, I can run down to the store and get a replacement in about ten minutes..Try to do that with Digi-Key or Mouser or Newark. Their stuff is at least overnight and I gotta pay for the high freight on an express shipment.

My compliments to the gang at the SHACK.. They have kept me on the air more than once.

The North American Teleconference Radio Network will be on-the-air
Sunday July 12th 5:30PM ET.
Many repeaters across the country will be carrying the
Teleconference. Check in your local area repeaters for the program.
The topic of this NTRN is: AMSAT and the future of amateur radio
satellite operations. The panelists include:

Aurthur C. Clark
Barry Goldwater K7UGA
Dr. Karl Minzer of AMSAT-DL
Bill Tynan W3XO - President of AMSAT-NA
Joe Schroeder W9JUV - Director of Development AMSAT-NA
Ray Soifir W2RS - Exec VP - AMSAT-NA
Dick Daniels W4PUJ - Phase IIID Project Manager AMSAT-NA
Rich Ensign N8IWJ - Educational Director - AMSAT-NA
Rosalie White WA1STO - Educational Director ARRL
Tony England W0ORE - Astronaut, educator

The Pre-net shows start at 5:30 ET. The net starts at 6:00 PM ET and
runs till 8:00 PM ET. The Pre-net shows are produced by Steve Bauer,
KC0HF and Hap Holly, KC9RP.

The NTRN will also be heard on the Lets Talk Radio satellite feed on GTE
Spacenet 3.

It should be an interesting 2 1/2 hours. Tune it in!

Enjoy!! 73, John Desmond K0TG
NTRN Engineer

Yesterday (7 July) my friend Marll McDonald got his Novice license in the mail -- only 5-1/2 weeks from taking the exam! His call is now KB1AGM. So there is one point in the spectrum of latest FCC issued Ham calls. I wonder if the speed of the FCC's response is due to low summer licensing activity? Or maybe some old slowpoke in Gettysburgh is on vacation!

I agree, Paul. But I would have said something about one of the stated
reasons for ham radio, that is, 'to promote international goodwill.' Do
I remember that part right from Part 97?

From: evans@shuksan.boeing.com
Message-ID: <2201@shuksan.boeing.com>
Source record: 287707

I've also got an Icom 2AT and have checked with icom on increasing the power.

They've said you can't plug in to car voltage (12v- 13.6) because it will damage the unit. They sold me an adapter that is a fake battery pack which plugs in where the battery goes, and regulates the voltage down to a safe level. Sorry, I don't have my manual here, so, I'm not sure of the max top operating voltage.

They also said you can't put in a 13v or 12v battery. You'll burn up the radio.
What can you do?. Well I'm putting the ramsey 20Watt power amp kit togethor right now, and plan on using that with my IC-2AT and H16 handhelds. That is advertised as a 20 - 30 watt booster depending on how much is put in. I've got the basic amp put togethor very easily. The hard part is the power switching relay which came as an additional unit. That unit's job is to turn off the power amp, and bypass it when you're receiving. When you transmit, the relay cuts the amp back in. The packaging wasn't included, and the relay is a very tight package, and they recommend using coax to cut down on noise, so it's a mechanical hassle to do it.

Anyway, that's what I've done..

>the 24AT up and down we found that the action was on 122.93, the
>FC was close. Using the same procedure we also found 153.18,

My guess would be that it's your 2006 which is off and
not the 2810. In fact if the 2810 was off by that much
I'd think of sending it back in.

What kind of distance from the transmitter could you count
the freq at? I got a 2810 w/bargraph and backlite recently
but so far haven't found much to count.

>In general, the frequency counter was very valuable. I was very
>surprised how good it worked. In the city it works like crap.
>It can't pick up 800 MHz at all, 440 is okay while 2 meter is
>good. But at the airport (away from the city) it worked good.

It can pick up all of these things, plus transmitters in
the milliwatt range, and portable phones, baby monitors,
etc., but ONLY if you are close enough to the transmitter.
Counting a cellular phone means you have to be within a
few feet as I recall, unless you have the $1k tunable
pre-selector, in which case you can supposedly multiply
the distance by 10.

With my 2810 I got the following results:

- counted low power 49 MHz transmitter about about 20'.
- counted low power wireless mike about about 30'
- counted Radio Shack ultra low power wireless mike
about about 1/4" (yes, inches. I had to wrap the
transmitter antenna around the FC antenna).

- counted some ham freqs at 10', but probably could have
done it out to about 200' or more.
- counted broadcast FM, barely.

The 2810 BTW is a good price right now on sale from Opto.
$199.95 gets you the counter, WITH signal strength bargraph
(which it never had before). You have to supply an antenna,
and may want to opt for the (overpriced) backlighting at $45.00.

>Without it we would have never found the primary show frequency
>(which is where all the action was). While the FC didn't always
>give a sold lock, using the 24AT and turning the dial yielded the
>correct frequency (with in a few 100 KHz). Summarizing this
>airshow, I would recommend the following items for any airshow
>monitoring:
> - VFR sectional (to get the basic airport frequencies)
> - Scanner capable of VHF and UHF airband.
> - Frequency counter.
> - Another receiving device with a tunable dial (any ham HT
> capable of airband) to fine tune to the exact frequencie
> found on the FC.

My ICOM R1 works both as a scanner and receiver (and a wideband
freq counter in cases of a loud signal :-))

> - Paper and pencil (you want to write new frequencies down
> before you forget them!).

Plus extra batteries, and/or cigarette lighter power adaptors.

Is there a real need for this to be posted twice a month? It's not that our 4 gigabytes of disk are close to full but there have to be people who are almost always running near full? Just thought I would ask?

Bob

>to the US than Mexico. And somehow English survived easily, without a
>law to defend it.

Your history lesson ignores one thing, Phil, the willingness of the immigrants to learn and speak English! Try a few weeks in Sunny SoCal to convince yourself that an island culture is forming here...one that has all but refused to learn to speak our language.

>Sure, it is only natural that most of the government's business,
>including FCC ham tests, should be in English. But if there is
>sufficient demand for tests in, say, Spanish, they should be provided.
>After all, the tests and answers are standardized, and since the VECs

>incentive left for an immigrant ham to learn English if he/she wants
>to talk to the average native US ham. And if he/she prefers to speak
>only to his fellow immigrants, why should you care? It's still a free,
>pluralistic society. So far, at least.

Gotta love your style Phil! You only missed the point a little, the point is that the Hispanic population here in the L.A. area is very agressive, and they have in the very recent past become a problem on the air, refusing to ID, being extremely rude, calling OVER existing QSO's, QRMing the bottom of the 10 meter band, claiming that it's ok to talk to their friends who are unlicensed, as well as a host of other NON-HAM things. Sure, some of them are bootleggers, but more are license holders that have brought their filthy 11 m. habits up to 10 m.

I claim that giving these people a test IN SPANISH is going to accelerate the demise of Amateur Radio. It will be a green light for the total destruction

of 10 meters...you people that live outside L.A. have no idea how bad it's really gotten, and the FCC is totally impotent.
>
>Anybody who thinks "official language" laws are a good idea ought to
>visit Montreal and ask the sizeable English-speaking minority what
>they think about Quebec's "French Only" law.
>
>Phil

Apples and oranges. The english-speakers in Montreal ARE disenfranchised natives, most of them. The majority of the spanish-speakers in L.A. are NOT! ..and the INS is as impotent as the FCC in taking care of the business that they are supposed to do. I love ya Phil, like a brother, but you're just not tuned into this situation, come stay in L.A. for a while...just try to drive here...notice the number of people that are having accidents on the roadway around you and screaming "NO COMPRENDE!"...sigh...

353. Twin Lead J-Pole Antenna

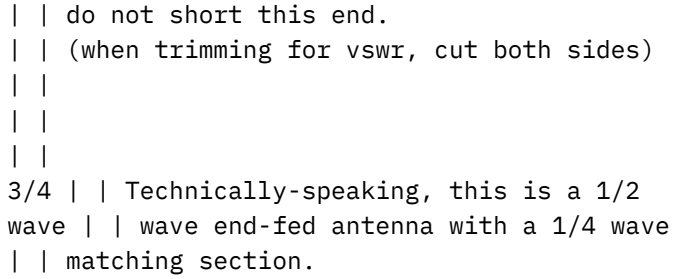
Newsgroup: rec.radio.amateur.misc
Date: 1992-07-08 18:53:23 UTC
From: edh@sqa.dsg.ti.com
Message-ID: <1992Jul8.185323.4573@axis.dsg.ti.com>
Source record: 287689

I just read a _much_ bastardized version of an article I wrote about a year ago and posted here. The repost had apparently been picked up off of packet, so I cannot fault the person who reposted the tv twin-lead j-pole plans, other than to point out that D.A.R.C. is the Dallas Amateur Radio Club. I know many plans have been printed for this type of antenna, but the hacked up version obviously started from my post (as you can see when you read below). I didn't just write a cut the wire and run article, but I researched the subject, calculated average values for the tv twin-lead (so the builder could select the center frequency of choice), and I give instructions on fine-tuning. I have no problem with people sharing this information around, but those who do so should a)attribute their source, b)avoid editing the article, and c)especially avoid changes in meaning (i.e. using foam center tv lead-in is not just not a good idea, it won't work and can possibly short through the foam and damage a radio!) and _finally_ d)if someone is going to ignore a-c, at _least_ have the decency to change the first person references! I have e-mailed the following article to many requesters during the past year, and have edited to improve it in some areas. The requester here on the net (that started the thread that contained the bastardized version) got a copy of what follows (prefaced by a note from me) the same day the request was made.

I write the above because an aquaintance upbraided me about his newly built j-pole not working. He had a copy of the hacked up plans and no idea what to do to fix it. I have built _many_ of these antennas using the plans that follow and given them to many friends as well as using them myself. My most recent effort (the night before field day) shows vswr at 1:1.1 at 146MHz and 1:1.2-3 at 444MHz. We use this kind of antenna frequently for Skywarn work (since the prudent thing is to disconnect the outdoor antenna during the storm).

--cut here and print the instructions that follow--

The following is a description of a J-Pole antenna made from 300 ohm TV twin-lead. They have quite a few advantages which include improved performance for HTs, portability, and low cost.



do not short this end.
(when trimming for vswr, cut both sides)
3/4
Technically-speaking, this is a 1/2
wave
wave end-fed antenna with a 1/4 wave
matching section.

```
| |
| 1/4" gap
| | (trim for vswr _below_ gap)
| | 1/4
| | wave
| |
coax ctr conductor=>* *<= coax shield
1 1/4"-| |
-*- solder the twin leads together at bottom
```

For a center frequency of 146 MHz:
1. Start with @54" of TV twin lead (flat, NOT foam core)
2. Strip 1/2" of insulation at bottom and solder wires together.
3. Measure 1 1/4" from soldered wires and strip insulation on both sides. This is the solder point for a coax feedline.
4. Measure 16 3/4" from coax shield solder point and cut out 1/4" notch.
5. Measure 50 1/3" from coax center conductor solder point and trim off twin lead at that point.
6. Feed with a length of RG58U coax. Tape coax at feedpoint to the twin lead for strength and seal coax for weather protection.

To get the best possible match, in step three above simply MARK the "solder points" and measure from the mark for step 4 and 5. Now solder straight pins to your conductor and your shield. Insert the pins at the marked point and test for VSWR at the design frequency (146MHz). If necessary, probe up or down till you reach 1:1 (close as possible). Solder at the best points. To try this, you may want to start with the twin lead a little long and trim down to resonant length - note: you'll need to trim in a 3:1 ratio to maintain the 3/4 to 1/4 wave.

It has been noted that this design can lead to rf coupling onto the feedline. To avoid, put ferrite beads on the coax at the feedpoint, or use 3-5 turns of coax (1"-2") taped together at the feedpoint.

You may attach an alligator clip to the plastic on the top of the antenna in order to easily hang it. Alternately, punch a hole near the top and use a length of fishing line to hang.

This design appears on many BBSs, in club newsletters, and in books; the earliest reference that I know of is a Jan. 1984 D.A.R.C. antenna article by James Burks, KA5QYV. This antenna is relatively broad-banded and will be more than adequate if simply built as noted in steps above.

FYI, the 1/4 wave sections for other center frequencies are:
144 MHz =17 inches, 145 =16.88, 146 =16.75, 147 =16.65, 148 =16.54

I usually just go ahead and solder the coax in place and trim down to as close to 1:1 vswr as I can get. I use the MFJ vhf antenna analyzer and a frequency counter then afterwards test with a radio and in-line swr/power meter. When done, the antenna should also present 1:1.2-3 vswr in the center of 444MHz band as well (demonstrated on my dual-band meter and Alinco DJ-580).

I have seen reviews of commercial versions of this antenna (from MFJ and ??) which tested the SWR on both 144 and 440 and found similar values. At any rate, I'm using my homebrew version on both bands with fine results.

Following a suggestion from K8BXD when I mentioned to him that I was looking for a VHF/UHF antenna for wheelchair mobile, I slid the antenna into a 5 ft. length of 1/2'' PVC tubing. It is currently propped against the wall on my balcony where there was no easy way to hang it. I have no way to measure the effects of the PVC, but the performance hasn't changed at all and placing the antenna outside improved results overall.

P.S. - I haven't gotten around to mounting it on the wheelchair permanently yet but a temporary trial inside my apartment worked fine.

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 19:30 UT, 08 JULY

/\

-- This alert was delayed due to equipment problems --
The malfunction is being investigated

No Terrestrial Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 08 July)

Flare Size: Class X1.2/1B
Location: S10E46 (Region 7220)
Tenflare: 820 sfu
SESC Times: Begin=08/0942 UT, Peak=08/0950 UT, End=08/0952 UT
(SESC Times are based on a half-power-point system)
Sweeps: None

PRELIMINARY X-RAY TIME PROFILE DATA AND ESTIMATED STATISTICS:

BEGIN (XRAY) MAX (XRAY) END (XRAY) DURATION INTEG. FLUX SWF DUR.
------------ ----------- ----------- -------- ----------- --------
0942 (C1.1) 0950 (X1.2) 1026 (C9.9) 034 MIN. 0.055 J/m^2 031 min

NOTE: The xray time profile data above is not based on the half-power-point system, but is intended to give a general idea of the duration of the entire event, from the start to the end when xrays fall below M-class levels. Integrated x-ray flux covers the interval from start to end.

The integrated x-ray flux may be slightly in error. We're experiencing ongoing equipment problems that prevented full data coverage of this major event. Times and given x-ray levels are accurate.

SYNOPSIS:

This event originated from Region 7220, which developed a small delta magnetic configuration yesterday in the northern area of the trailing spot complex. Apparently, a potential major flare warning which was issued at 02:00 UT on 08 July failed to be broadcast due to an unscheduled electrical power outage likely caused by a nearby thunderstorm.

This flare event was not particularly impressive. It was very impulsive
in x-rays and was rather small in optical size. Additional major flare
activity may be possible from this region over the next 72 hours.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for
terrestrial impacts in various categories.

```
---------------------------------
POTENTIAL MAGNITUDE OF DISTURBANCE
---------------------------------
HIGH : 0 %
MODERATE : 0 %
LOW : 5 %
NONE : 95 %

>
>Does anybody out there know where I can get an ATV tranceiver and the
>corresponding software for the Apple Macintosh ?

I haven't seen this question asked before, so I thought it would be
useful to post the meager information I have.

The only reference to television I can find in my collection of Mac software
information is the following:

MacNet
Public-domain programs (currently on nine disks) contributed by
Macintosh packet users. Includes test preparation, contest logging,
propagation prediction, satellite tracking, and amateur television. Send
formatted 800K Macintosh disks with stamped, self-addressed return disk
mailer to John D. Seney, KB1HE, 144 Pepperidge Dr., Manchester, NH
03103. Contributions of public-domain programs are encouraged.

(BTW, I got that info some time ago, so it may be more than nine disks
by now.)

Or you might try some of the landline BBSs that carry Macintosh ham
software:

MacScience BBS (408) 866-4933.
Digikron Systems BBS (408) 253-1309.
WB3FFV BBS (301) 625-0817, 625-9482, and 625-9663.
N8EMR BBS (614) 895-2553

>Bob
>

Well, with respect to disk space, it really matters little how often the FAQ is posted, as it uses a Supersedes: header to delete the previous copy. If you want to save disk space, throttle back the retention time for all articles. (Although those that maintain FAQ's would prefer that you obey the Expires: header on articles that have them)

It does burden the reader with yet another article to kill, but then that's what automated kill files are for (and the FAQ's are threaded together so you can kill them easily).

The reasons the FAQ is posted bi-weekly include:

1. News managers engage in penny-wise/pound-foolish practices such as arbitrarily deleting all news after only a day or two. This includes FAQ's with Expires: headers on them, and even whole newsgroups like news.answers and news.announce.newusers.

2. We have a lot of traffic in this group, especially from new users, who like to recycle the same questions (cases-in-point, the recent threads about QRP and the callbook server) over and over.

3. If it goes back to once-a-month, it gets lost in the noise of the newsgroup, and bandwidth is wasted by people posting FAQ's and asking for the FAQ list.

I guess us humble volunteers are trying to do a net-service the best way we can. Usenet's volatile nature and short attention-span requires that we repeat things a lot. Usenet's volatile nature and short attention-span requires that we repeat things a lot :-).

Uh, I've been living in San Diego since last August. Does that qualify as "Sunny SoCal"?. Sure, there are lots of immigrants around here...Vietnamese, Mexicans, Filipinos, Chinese. The signs in the airport are in both English and Spanish. But I've had very little trouble getting around town without knowing Vietnamese, Spanish or Tagalog. Nor have I had any problem finding plenty of English-speaking hams on repeaters. I suspect a non-English-speaking immigrant has a lot more trouble than I do getting around here.

> Gotta love your style Phil! You only missed the point a little, the point is

> really gotten, and the FCC is totally impotent.

What does deliberate interference have to do with a person's native language? Perhaps if the tests were given in a person's native language he might actually understand what the rules mean instead of simply memorizing the answer key. Or at least he would have less of an excuse to plead ignorance. Or maybe these guys don't have licenses in the first place, in which case it makes absolutely no difference what language the tests are in.

Speaking of rude L.A hams, I don't hear too many non-English speakers (or even non-American accents) on the 147.435 "Mt. Wilson" repeater...

> Apples and oranges. The english-speakers in Montreal ARE disenfranchised
> natives, most of them. The majority of the spanish-speakers in L.A. are NOT!

I guess we should have bought the Berlin Wall (complete with land mines, attack dogs, guard towers and shoot-to-kill orders) on the cheap when we had the chance to protect the border against all those dirty Mexicans, eh?

Phil

365. Anyone heard of SR Telecom?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-08 23:35:11 UTC

Cross-posted to: sci.electronics,rec.radio.amateur.misc

I've got a friend who has a piece of microwave equipment which was originally part of a Harris Corp. system.

Harris told him that the device was made by "SR Telecom" & apparently that this is a Canadian firm.

My friend needs to contact SR Telecom to obtain some technical info on the part, but has been unable to track them down.

If anyone has a phone #/address for SR Telecom, I'd appreciate it being sent to me via mail!

Thanks,

Tim

SOLAR BULLETIN

08 July, 1992

Monthly Reports for June 1992

/\

MONTHLY REPORTS OF SOLAR GEOPHYSICAL ACTIVITY FOR JUNE ARE NOW AVAILABLE:

The monthly reports of solar and geophysical activity for the month of
June 1992 are now available for anonymous FTP from the following sites:

solar.stanford.edu <--> 36.10.0.4 <--> "pub/1992" and subdirectories
nic.funet.fi <--> 128.214.6.100 <--> "pub/dx/solarreports" and subdirs
xi.uleth.ca <--> 142.66.3.29 <--> "pub/solar/1992"

The files to get are:

"junflr.doc" - Summary of Solar Energetic Events for June 1992.

"junmag.doc" - Summary of Global Geomagnetic Activity for June.

"juntec.zip" - Summary of Global Total Electron Content (TEC),
compressed using ZIP.

"juntec.zoo" - Summary of Global TEC, compressed using ZOO.

"juntec.tar.Z" - Summary of Global TEC, TAR'd and COMPRESSed.

"sgdb-jun.zip" - Archive of all Daily Solar Geophysical Data
Broadcasts (SGDBs) for June using ZIP.

"sgdb-jun.zoo" - Archive of all SGDBs, compressed using ZOO.

"sgdb-jun.tar.Z" - Archive of all SGDBs, TAR'd and COMPRESSed.

Julian Macassey writes:
> Now why am I not surprised that the ARRL would come to the defense of Morris?
> Do the ARRL continue to fight to keep Morris part of amateur radio?
> Do the geezers really believe without Morris there is no radio.

I confused by these continuing articles about Morris, I just don't see how Morris is part of amateur radio. He's been around for a long time and gets the job done but it wouldn't be the end of the amateur radio if he got a new job. He doesn't even have a novice license but that's because he's busy with his full time job as Senior Rodent Control Engineer working for me at Alligator Pear Ranch. About the only thing he does for amateur radio is to keep the birds off the antenna farm, the rest of the time he works on the ranch.

General USENET netiquette suggests that FAQs appear only once a month.
No other group has biweekly FAQ postings; I sincerely doubt they're
necessary here.

They're close to reaching the Hare-Krishnas-in-the-Airport level of
annoyance.

I'd suggest you back off on the frequency of the postings until some
significant portion of the readership expresses a need for it.

I'm already working on filtering them out of the info-hams digest
because of the large number of complaints. Of course, info-hams
subscribers can use our listserver to request a copy of the FAQ
postings (concatenated into one single article).
- Brian

Since Julian has been flamed in public (and I can only guess
what his mailbox is reading like these days..) I have to say
three things :-

1. Geezerdom is a state of mind, not just an age group.
2. Mr Macassey has a sense of humour that might be a little
"different" (ie not out of "Married with Children"), and
I read the original posting with some mirth...
3. Just how interested do you think the rest of us are in
the contents of your kill file ?

Sigh, this all makes requests for mods & QSL info look appealing :-)

Any Amateurs looking for HAM related files may call the HAM Connection BBS at (409)833-1795 at 2400 Baud, N,8,1 / 24 hours per day. I spend some time looking for good ham related files and make them available on this BBS. If you see something you like and can't afford the long distance bill to download just leave me E-mail on my System or here and I will let you know where you can FTP the file from.

The BBS is free to all amateurs and there is no file ratios. Access on the first call.

Sysop - N5UYH @ the Ham Connection BBS in S.E. texas

ARLB065 FCC SEEKS COMMENT

THE FCC ON JULY 2 ISSUED ITS NOTICE OF PROPOSED RULE MAKING IN PR
DOCKET 92-136, TO AMEND ITS RULES REGARDING PERMISSIBLE AMATEUR
COMMUNICATIONS. THE PROPOSAL WAS INITIATED BY SEVERAL LETTERS AND
PETITIONS, AND IS BASED IN PART ON AN ARRL INFORMAL PROPOSAL.
COMMENT DEADLINE IS OCTOBER 1, 1992, AND REPLY COMMENT DEADLINE IS
DECEMBER 1.

IF ADOPTED, THE NEW RULES WOULD RELAX RESTRICTIONS ON PUBLIC
SERVICE-TYPE COMMUNICATIONS, SUCH AS FOR PARADES, RACES, AND FAIRS,
WHICH CURRENTLY ARE PROHIBITED.

MORE INFORMATION WILL APPEAR IN AUGUST AND SEPTEMBER QST.

SB QST ARL ARLB066
ARLB066 MORE ON CALL SIGNS

IN A LETTER TO FCC CHAIRMAN ALFRED E. SIKES, ARRL PRESIDENT GEORGE
WILSON III, W4OYI, HAS AGAIN EXPRESSED THE LEAGUE'S SUPPORT FOR A
SYSTEM TO GRANT SPECIFIC CALL SIGNS TO AMATEURS UPON REQUEST. THE
FCC RECENTLY RECEIVED A LETTER SUPPORTING SUCH A SYSTEM FROM U.S.
CONGRESSMEN EDWARD MARKEY OF MASSACHUSETTS AND RALPH HALL OF TEXAS.

''WE WISH TO ENDORSE,'' WILSON SAID, ''THE CREATION OF A SYSTEM
WHEREBY THE COMMISSION COULD MAKE SPECIFIC UNASSIGNED AMATEUR RADIO
CALL SIGNS AVAILABLE TO ITS LICENSEES, THROUGH A PROGRAM THAT WOULD
BE FULLY FUNDED BY APPLICANT'S FEES'' (SUCH AS HALL AND MARKEY
ADVOCATE).

THE LETTER PARTICULARLY NOTED PREVIOUS HOLDERS OF CALL SIGNS WHO HAD
RELINQUISHED THEM WHEN MOVING TO ANOTHER CALL AREA, UNDER FCC RULES
NO LONGER IN EFFECT.

THE LETTER OFFERED THE SERVICES OF THE LEAGUE IN WORKING ''WITH FCC
STAFF IN DEVELOPING A FAIR, WORKABLE SYSTEM FOR THE ASSIGNING OF
SPECIFIC, UNASSIGNED AMATEUR RADIO CALL SIGNS.''

Marc,
Sounds to me like you got a lemon radio. I have the HTX-202 and love it to death. Another local ham has one also and he loves his. Neither one of us have had any problems with the radio. You probably should have opted for an exchange
rather than a return.

Good luck in the future. :)

Mike

> related?

QuickTime. MicroTV. RadiusTV.

Any of these ring a bell?

In any case, it makes sense. The Mac is by far the best graphics computer
around. ATV is just one form of graphic communication. (Although it also
happens to be real-time)

SB QST ARL ARLB064
ARLB064 INTERNATIONAL NEWS

NATIONAL AMATEUR RADIO ORGANIZATIONS REPRESENTING SLOVENIA AND
CROATIA HAVE BEEN PROPOSED FOR MEMBERSHIP IN THE INTERNATIONAL
AMATEUR RADIO UNION. IARU MEMBER SOCIETIES HAVE UNTIL NOVEMBER 30
TO CAST THEIR VOTES ON PROPOSALS TO ADMIT THE ASSOCIATION OF RADIO
AMATEURS OF SLOVENIA, ABBREVIATED ZRS, AND THE CROATIAN
RADIO-AMATEUR ASSOCIATION, ABBREVIATED HRS.

AMATEURS IN CROATIA, A RECENT NEW MEMBER OF THE INTERNATIONAL
TELECOMMUNICATIONS UNION, HAVE RECENTLY BEGUN USING THE PREFIX 9A.

IN OTHER IARU NEWS, THE ALBANIAN AMATEUR RADIO ASSOCIATION HAS BEEN
ADMITED TO IARU MEMBERSHIP BY VOTE OF THE MEMBER SOCIETIES. ALSO,
THE IARU MEMBERSHIP OF THE ESTONIAN AMATEUR RADIO UNION, ERAU, HAS
BEEN REACTIVATED. ERAU WAS ADMITTED TO THE IARU IN 1938 BUT WAS
INACTIVE DURING THE PERIOD WHEN ESTONIAN AMATEURS WERE REPRESENTED
BY THE RADIO SPORT FEDERATION OF THE USSR.

381. Code Tapes vs Computer-Generated Code

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 12:07:23 UTC
From: hgpeach@ms.uky.edu
Message-ID: <1992Jul9.80724.17575@ms.uky.edu>

A local VE friend and I are having a disagreement over the effectiveness of computer-generated code for learning morse code. It is my contention that the standards setup by the ARRL and FCC are published in the handbook and if followed by a code program, the program will generate code that can not be distinguished from a code tape.

My friend says that in his and the majority of other VE's experience in this area, about 80% of those persons who learn morse using code programs fail. He says that the pass rate is significantly higher when tapes are used. For this reason, they advise students not to use code programs and to only use tapes.

My argument is that a lot of tapes are generated from computer anyway, and that, once again, given a properly designed program and an adequate speaker, computer-generated code can not be distinguished from a code tape.

Any other VEs out there care to comment on this?

>necessary here.

Well, Jon Kamens's Index of Periodic Information Postings lists many
newsgroups that have bi-weekly FAQ's, usually large-traffic newgroups
with a lot of newcomers asking technical questions (like rec.aviation).

>They're close to reaching the Hare-Krishnas-in-the-Airport level of
>annoyance.

Hare Krishna, Krishna Hare! Please put some money in my tambourene! :-)

>I'd suggest you back off on the frequency of the postings until some
>significant portion of the readership expresses a need for it.

Well, like highway drivers "voting with their right foot", readers of
this newsgroup "vote with their enter key" by posting lots of topics
covered by the FAQ.

And of course, you can always put them in your kill file.

>I'm already working on filtering them out of the info-hams digest
>because of the large number of complaints. Of course, info-hams
>subscribers can use our listserver to request a copy of the FAQ
>postings (concatenated into one single article).

Well, as we discussed via E-mail when this topic came up, filtering them
and making them available either via a special mailing or via a
mail-server option is a GOOD IDEA that I fully support. The multi-part
nature results from the reality of a 64K pass-through limit at some UUCP
sites (including those that have some of the FAQ co-coordinators). At
least we thread them together now.

As I said before, this is a complex topic with no easy solutions. We as
net-volunteers are trying to do what's best all around.

In my experience, learning CW on a computer was much easier than code tapes. Tapes are a pain to use, and simply don't supply a good variety of CW (such as different speeds, different text, Farnsworth vs. no Farnsworth, etc). My personal recommendation is to learn the bare minimum on a computer, and then start listening on the Novice HF CW bands. (When was the last time you heard on-the-air CW that could be distinguished as being tape vs. computer generated?)
Once one can copy easily actual signals, taking a taped exam is a piece of cake. I learned using this method (with a TRS80 model III), and went straight to the 13 wpm code test without ever taking the Novice code. I think too many people try to learn CW and/or improve their speed without ever listening to a radio- the best way to improve one's CW is to use it on the air.

Well, I'm not a VE (yet) but I did go from 0-20 wpm in around 4 months
(and they say miracles have ceased!!) and this is all still fresh in my
mind, so I'll toss in my $.02...

I think the key is in your argument: a _properly_ _designed_ program.
Unfortunately, the one I used was a little flakey about spacing. The
tapes were definitely better quality code. Still, I found the computer
an invaluable tool for a couple of reasons. First, the tapes only give
you so many groups to copy. It doesn't take long till you're memorizing.
This was no big deal with the first batch of letters - it really didn't
take me too long to learn E,T,I,M,A and N. But by the time I was working
on Q,X,Z and Y, I really needed to spend more time before mixing them in
with the rest of the alphabet. With the computer program, I could spend
as much time as I wanted on just those letters; also, since it would
send another character as soon as I'd correctly typed in the letter, I
could push myself to go as fast as possible. This really helped to make
copying the letters automatic, as I didn't have time to think about them.
Second, once I'd mastered most of the characters, I could ask the
computer for random code, which would go on indefinitely. I found this
much more useful than repeatedly copying "Jonathan Livingston Buzzard
keeps quiet except when flying over my shack" and "The five wizards
quickly jumped over the six green boxes." (See what I mean about
memorizing??) Also, I could increase or decrease the speed as needed.

This is not to detract from the value of tapes. I personally found both
tools to be essential. The tapes taught me the basic characters, as well

as what code should sound like. Once I had mastered the characters, I would play the code practice tapes while driving in my car. (Did I mention that, for me, the key to learning code was to be obsessed with it?) And the code on the tapes was much closer to the code on the tests.

My personal recommendation to someone trying to learn the code is to take advantage of all the tools available. A good (or even semi-decent) computer program can be a valuable supplement to a good set of tapes, such as those put out by the ARRL. Once one has mastered most of the characters, I would recommend copying all the code s/he can find: good, bad, and indifferent; tapes, computer-generated, and off-the-air. I have one taped code course that I found absolutely awful. They started out with very slow characters, then gradually speeded them up (instead of using quick characters and just shortening the space between them.) I still have trouble copying code from those tapes...but they helped. They were so bad that I knew that if I could copy 10wpm from them, I could easily copy 13wpm of "good" code. Another advantage I found to copying "bad" code was that I wasn't thrown off by slight variations in sending style between the tapes and the test. After spending several hours a week copying actual QSO's, I could copy most anybody's fist.

I think that, perhaps, one reason for the low pass rate of people who learned code from computer programs might be that they're used to typing what they hear. I know that I can copy a lot faster on a keyboard, simply because I can type faster than I can write. Also, perhaps because many of us are "touch" typists, and don't think of the letters we're striking, it takes a conscious effort to make the transition from "index finger, left hand" to writing the letter "F". That extra step, the longer time required to write down the letters, and the extra nervousness from doing something differently while under stress, could just be the combination that makes all the difference. For some people, and IMHO, of course...

(I hope nobody takes this as a "Morris is good for you" posting. Looking back, I can really see how I would have hated learning Morse if I hadn't wanted to. Heck, I wanted to, and it was still a pain. Let's not let this thread deteriorate into that old argument again, please?)

****
Just some comments:

I really struggled with the code. Started with the ARRL tapes.
Listened so much I had the tapes memorized. Failed the code test
twice. Months later got a computer program, but I didn't rely
on it completely. Got a copy of Gordon West's tapes. They
were GREAT! They were fun and I was copying 100%. Went and took
the 5 wpm test and BARELY passed. The speed on the test was much
faster than Gordon's tapes, therefore it was really tough.

My goal for this year is to upgrade to 13 wpm. I will use computer program...
not sure about Gordon's tapes. I liked them MUCH BETTER than the ARRL tapes,
but with the speed differences...I don't know. The one thing I will do that
I didn't do before is copy off the air. Everyone tells me that's the best
way to increase speed.

>having a disagreement over the effectiveness of computer-generated code
>for learning morse code.

Well I'm not a VE, but I can attest that it was the computer, and not the tapes (I tried both) that brought me from 0 morse code to about 7wpm (with an easy pass at 5wpm) in 2 weeks. From what I can see, the tapes (I had a set of 4) were OK for emersing your ears (if you will) in the code environment, but their lack of interactivity made learning that much slower. Any psychologist will tell you that instant (or near-time) feedback will enhance learning speed (particularly skill development) in most arenas. Software provides this feedback and therefore, when properly used, will easily out perform tape. My technique was daily drills of 1 to 1.5 hours per day, half of that in the morning, and half in the evening. Two weeks exactly, and I was copying 90% at 7wpm I easily passed the 5wpm test.

Note that I did my COPY by hand. That is I used exercises that were copied on paper, with a pencil, not on the computer keyboard (I did these too, but spent 75% of the time hand copying). I think this is very important... To reherse the way you're going to do it on the test...

Humm-embarassing to follow-up to my own post:

I apologise for the tone I took in introducing the repost of
my j-pole construction article. Others have certainly trod
the same path as I, and the basics are sufficiently simple
that wording simularities are inevitable.

What I _should_ have done is preface my article by saying:
"Here's a more complete j-pole article that includes construction
and tuning hints:" and then simply appended the article.

Well, I hope my longer version at least helps someone successfully
construct one of these very useful antennas.

Cheers & 73

Source record: 287718

Simply put, Morse code is population control, just like theory tests. What is the big deal? Morse code is strictly memorization, some hams memorize the theory, just for license upgrade. Without the code requirement, persons already versed in electronics would have an advantage over non-electronics types. Morse code isn't used much in the outside world, is called for in the international regulations, and does not offer any sizeable group of people an unfair advantage.

Morris has been dead for years but Morse code is here to stay. BTW, anyone who complains about the bandwidth of AM, how come you aren't operating CW ?? Used a spectrum analyzer lately ??

Source record: 287719

I agree with you...there's no difference between the computer programs and the tapes, except you can usually set the computer programs to generate pseudo random text rather than listening to the same tapes over and over again. The important thing is to make sure these computer programs are set up to match what the VE's are going to use for your test. Many people who studied under the equal weighting tapes/programs were very annoyed upon finding the tapes we use are Farnsworth weighted.

As for upgrades, while I went from 5->13 primarily with W1AW and QSO's, I did 13->20 nearly exclusively with supermorse. The major problem is that the W1AW broadcasts and other stuff doesn't have all the nice steps that are useful in getting 13 down (10, 13, 15) when you're trying to go to 20. 18 would be nice. Copying the bulletins is kind of trite because they are the same for days at a time and most of them is easily predicted (I can pick out Newington almost as easily as the word THE in Morse).

-Ron

390. Propagation Forecast Bulletin 27 ARLP027

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 14:31:31 UTC

============================================================

ZCZC AP35
QST DE W1AW
Propagation Forecast Bulletin 27 ARLP027
>From Tad Cook, KT7H, Seattle, WA
July 6, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To All Radio Amateurs

The possible shortwave fade on Field Day mentioned in ARLP026 did
not appear. The effects of a solar flare were delayed somewhat,
with the most disturbed conditions on June 30, when the Boulder A
index reached 46. The K index went only as high as 4 on Field Day
weekend, dropping frequently back to 2, an indication of stable
geomagnetic conditions and lower absorption.

But on June 29 at 0600 UTC the K index reached 7. It dropped back
between 3 and 4, and then up to 7 again at 0600 and 0900 UTC on
June 30. The flare mentioned in the last bulletin as possibly
affecting Field Day was the largest since February 27, 1992.

Over the week at the end of June there was more total solar activity
than there was in many recent months. Conditions could be active
again on July 5 and 6, and possibly again by mid-month. The solar
flux should reach a short term peak of about 135 around July 8, then
drop back to 115 around July 13, then up to 135 again July 18.

The rate of drop of the solar flux has slowed somewhat. The 90 day
solar flux average dropped 19 points during March, 21 points during
April, and 35 points during May, but only 17 points in June. This
is the leveling off in the drop in flux values mentioned in ARLP021.

10 and 15 meters remain chancy for long distance propagation. 17,
20 and 30 meters are the best bets. 20 meter daytime propagation is
not nearly as good as it was a few months back, with the best times
being local evening and early morning.

Sunspot Numbers from June 25 through July 1 were 87, 84, 56, 98,
119, 108 and 117, with a mean of 95.6. 10.7 cm solar flux for the
same period was 122.4, 111.6, 109.5, 108.3, 110.7, 122.9 and 129.8,
with a mean of 116.5.

I live in LA, I use the repeaters, 10 meters, etc., and I drive
the freeways and the surface streets, and I really don't know
what you're talking about. Maybe it's just in Santa Monica that
your problem exists.

394. Re: Morse code requirement

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 15:14:32 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.92Jul9111432@rinhp750.gmr.com>
Source record: 287723

I'm a Morse code enthusiast. With few exceptions, all my HF contacts have been via Morse code. I was able to increase my code speed (necessary to upgrade) via CW ragchews, some as long as two hours.

Now that I've passed the 20wpm requirement and have no more need to use it, I still prefer CW over SSB for a relaxing and enjoyable chat.

However, I do not think that Morse code proficiency should be a criteria for advancement. I think it is a very popular mode of communication and it is required for HF operation by international treaty, but it's only ONE mode.

I think a far better scheme would be to increase the need for technical knowledge, especially for the Extra Class license. I believe that rather than prove that one can receive at a 20 wpm rate, one should be required to prove a knowledge of digital communications and computer literacy. I think it's senseless to expect the greatest technical contribution from someone who is required to prove he can use 60 year old methods. If we want to promote technical competence then we better have a technically challenging examination.

How's this for an examination problem?

A radio station is set up in the back of the room for some kind of digital communication (mode unknown to examinee before the exam). However, it isn't working due to some error in the setup or configuration. The challenge is to use the station to request and receive a test message within some time limit.

Yeah, I know.... That test scenerio is full of holes..... But I hope I conveyed this thought: The exams for the higher licenses should be more technical and they should cover only the current and emerging technologies.

I'll be out of the office until August. 73 one and all.

I'd like to join the fray in calling for fewer of the FAQ postings. Once
a month should do it. Pointers can be posted more often telling people
where to FTP the stuff.

Additionally, it seems to me that the r.h.r. FAQ is exceptionally long,
and could probably be condensed to a smaller size.

POINTERS, POINTERS, POINTERS, PLEASE!. Those without FTP access can
have them mailed to them direct.

Don't forget as well that every time you post to the net your words end
up on a CD-ROM somewhere. Let's hope that the CD's don't get polluted as well.

SB DX ARL ARLD035
ARLD035 DX news

Thanks to Tedd, KB8NW, the Ohio/Penn PacketCluster Network, EI6FR,
and Randy, N0TG, for the following DX information.

COCOS KEELING ISLANDS. VK9CB activity has been sporadic. He was on
14094 kHz RTTY at 1300z. He has shown up with VK4UA on 14187 kHz
around 1140z. VK4UA reports this operation should run until July
3rd. QSLs via VK6LA. VK9CB is planning to return to Cocos-Keeling
in December or January.

MOZAMBIQUE. Steve, C9RDM, reports that club station C9TDM is open
Tuesdays and Thursdays and on the air from 1600 to 1800z. Classes
are being conducted on those days to inspire new hams. C9TDM has
been heard on 21279 kHz starting around 1330z and going by call
areas. Check 28480 kHz around 1400z, too. Oge, C9RAJ, is yet
another active new station from Mozambique.

WAKE ISLAND. Jim, VK9NS, is signing WR1Z/KH9 on all HF bands. His
length of stay is expected to be for about another week.

ITU HEADQUARTERS. Andy, DL4OK, will be leaving Liechtenstein to end
his European tour at Geneva. Look for him signing 4U1ITU through
July 4.

SNAKE ISLAND, 4K5ZI. RB5FF and others will activate 4Z5ZI from July
5 thru 25. Activity will be all bands/modes. DXCC country status
for this one has not yet been determined. QSL via DF8BK.

IOTA NEWS. The Island Hoppers Group will sign EJ0SI from the Sultee
Islands, EU-103, between July 9 and 14. QSL via EI6FR.
```

FIJI/WESTERN KIRIBATI. The JARL Kyoto ARC plans to be active on RTTY from 3D2 on August 7, move on to T30 from the 8th through 13th, and then return to 3D2 for August 14 and 15. QSL via JA3OIN.

DESECHEO. The same group that activated Navassa in January plans a big effort for KP5 in December. Operators will include N0TG, WA4DAN, KW2P, AA4VK and W0RJU.

WARC BAND AND VHF PACKETCLUSTER SPOTS.

30 meter activity includes OX/DK2OY, LZ1XL, S79EC, KG4DD, KP4DDB, ZA1J, IT9ORA, SV0DV/9, HB0/Y33VL, OD5/SP1MHV, 3B8CF, LU4KV, 4N2AJ, HP1CWB, ZA1TAC, PY2EX, HR/F2JD, K1EFI/VP9, HH2PK, FK8GJ, VK3XU and 9Y4NW.

On 17 meters, look for HB0/Y33VL, S79EC, KH6AQ, YL2PQ, FK8GJ, ZP6CW, XQ0YAF, HC5AI, LU7EAR, WR1Z/KH9, ZL2BO, VK8KE, HR5/F2JD, OD5/SP7LSE, CE3ZW, UA9TS, 5T5CJ, V44KAQ, ZF2AH, ZD8EB, WJ3U/6Y5, PJ9EE, D2/F6BLQ, VK7AK, VO2GUY, 6Y5/WJ3U, KH6HH, KG6TA, P4/PA3ECI, VP9HE, NH6XK, HK5LEX, TG9AGR, 7Z2AB and 9H3KE.

Even with low solar flux, ZLs have been worked this past week on 12 meters.

Six meters is hot. Look for KD4KVU in EM67, N8NQS/VE3 from EN87 and EN88, and finally XJ3S in FN03.

Tropo conditions have helped folks work N8NQS/VE3 and KW0A on two meters.

RELATIVELY RARE RTTY REPORTS.
5N3ZIP 21082/0710
6W1QB 21082/0713

EH92N 14085/1620
HL5BHH 21081/0937
UG6GG 14092/2118
UO5OIN 14088/2125
VP8CBK 21090/1520
VR6BX 14084/1523

ODDS AND ENDS. FR5ZU/T QSLs are arriving for the March 92 DXpedition. JA2NQG reports his March 92 Maldive operation netted 2321 contacts, mostly CW, including some on 160 and 6 meters. He will return to Lord Howe Island in mid-September. For contacts made after Jaunary 1, 1992 with HS0AIT, QSL via W3HCW.

QSLS in the mail include 6Y5/K2BS from 1/91, WN4KNN/ZP5 from 11/91, A61AC from 12/91 and the 8Q7CW and FO0CI operations from 3/92.

D2ACA CARDS. QSL manager Toly, UT3UY, states 90 percent of the cards for North America have been mailed, with the remainder to be

sent within a couple of weeks. Ditto cards for Asia. However, due to postal problems in the Ukraine, all cards bound for Europe are just getting mailed. QSL D2ACA only via LZ2DF or UT3UY.
NNNN

Good Luck on DX de KB8NW/OBS

I just can't help but comment on this. Morse code is used
EXXXXXXTENSIVELY in the outside world. Much of the LF and HF spectrum
is occupied by CW. Marine ship to shore communications use CW
continuously. WLO and KMI operate CW on hundreds of frequencies
simultaneously. Pilots and ships officers are required to know CW to
identify radiolocation beacons and for *normal* communications.

I will agree that CW is almost dead on the ham bands, however.

OK, specifically which parts of the FAQ? Please let us know as we are
always interested in feedback. E-mail to hamradio-faq@uts.amdahl.com.

>POINTERS, POINTERS, POINTERS, PLEASE!. Those without FTP access can
>have them mailed to them direct.

The FAQ, believe it or not, is already mostly pointers to other info.
There is about a megabyte of information at ftp.cs.buffalo.edu that we
(thankfully) don't post to the net every 2 weeks. Most of what's in the
FAQ is almost guaranteed to be asked sometime in the next month.

>Don't forget as well that every time you post to the net your words end
>up on a CD-ROM somewhere. Let's hope that the CD's don't get polluted as well.

Saying that a few FAQ's are going to pollute the CD's in light of the run-on
garbage in most of the soc.* and talk.* heirarchies is clearly nonsense.
The FAQ's are registered, indexed, and cross-posted to news.answers.
Whoever maintains NetNews/CD (Hi Kent! :-) has certainly anticipated
this occurrence and might choose instead to archive only some copies of
FAQ's.

I suspect that most of the "silent majority" of this newsgroup either
supports the way the FAQ's are posted, or really don't care. If you
really want you opinions to be known, please direct them to
hamradio-faq@uts.amdahl.com. Messages with specific criticism and
cut/paste changes are more likely to be followed than "do this/do that"
admonitions.

I also suspect that I am taking up a lot of newsgroup bandwidth and
patience trying to "get the last word." Barring anything really false
and egregious, I'm going to drop this thread.

>these too, but spent 75% of the time hand copying). I think this is very
>important... To reherse the way you're going to do it on the test...

When I just tried using SuperMorse to go from 5 to 13 wpm I failed the 13 wpm code test the first time. I then went back after I recovered from the devastation of failing and did QSO's on the air and used SuperMorse. In no time at all I went from 5 to 17 wpm without much trouble. I then squeaked by passing the 13wpm code test. Funny how that pressure can trip you up. 8-) I used exactly the same method to pass my 20 wpm code test with no problem this time. In fact I am still using Super Morse to increase my speed. 28 wpm at last check.

I am inclined to think that the problem of your VE friend's failure rate of code tests is not with the computer generated code but the way they are testing for the code. When I took the code test for my 13wpm the first time the code was at a really low tone which was hard for me to hear along with others who complained also so I wasn't the only one. I went to another site and their code was a tone that I could easily hear and funny enough sounded like the code I heard on the air which the other did not. Just kinda wondering why the failure rate is so high at your friends while I imagine the others might lower when it comes to code.

73!

406. ALERT: Major Solar Flare Alert

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 18:03:02 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.710704982@honte>
Source record: 287659
Cross-posted to: sci.astro,rec.radio.amateur.misc,rec.radio.shortwave

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 17:45 UT, 09 JULY

/\

No Terrestrial Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 09 July)

Flare Size: Class M6.7/2B
Location: S13E28 (Region 7220)
Tenflare: None.
Peak Radio: 480 sfu at 8,800 MHz
SESC Times: Begin=09/1635 UT, Peak=09/1644 UT, End=09/1655 UT
(SESC Times are based on a half-power-point system)
Sweeps: None reported at this time.

PRELIMINARY X-RAY TIME PROFILE DATA AND ESTIMATED STATISTICS:

BEGIN (XRAY) MAX (XRAY) END (XRAY) DURATION INTEG. FLUX SWF DUR.
------------ ----------- ----------- -------- ----------- --------
1603 (C1.2) 1644 (M6.7) 1720 (C9.7) 064 MIN. 0.082 J/m^2 042 min

NOTE: The xray time profile data above is not based on the half-power-point system, but is intended to give a general idea of the duration of the entire event, from the start to the end when xrays fall below M-class levels. Integrated x-ray flux covers the interval from start to end.

ADDITIONAL NOTES:

The start time incorporated into the x-ray time profile statistics above includes an apparent x-ray precursor burst that peaked at a class C3.1 x-ray level at 16:18 UT, shortly before the main phase of the flare.

SYNOPSIS:

This event was similar in character to the last major flare from Region 7220. It was rather impulsive in nature and does not appear to have been associated with any notable radio activity.

This flare was associated with a confirmed short wave fadeout (SWF) with ionospheric effects noted as far poleward as Thule, Greenland. The SWF was fairly brief and is being characterized as a minor event.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for
terrestrial impacts in various categories.

POTENTIAL MAGNITUDE OF DISTURBANCE

HIGH : 0 %
MODERATE : 0 %
LOW : 10 %
NONE : 90 %

OVERALL ARRIVAL PROBABILITY : 10 %

409. Heres a handy tip....

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 18:53:11 UTC
From: darel@maccs.dcss.mcmaster.ca
Message-ID: <1992Jul9.185311.11106@maccs.dcss.mcmaster.ca>
Source record: 287643

Hello All;

I am a mag mount antenna user, and have for a number of years tolerated the somewhat annoying whistling noise of a window slightly cracked to let the coax into the car. As I was heading out for a long trek in the car for a camping weekend, I was struck with a flash of brilliance ;-). At the door of my office there were a number of discarded IC antistatic tubes (the standard 14,16 pin size). I grabbed a handful and headed down to the car. Taking out the old swiss army knife, I cut the tube to length, sat it inverted on the window glass and the seal was perfect.
(ASCII End-View to follow)

```
top of door frame
| .---. |
| | | |
`-----' `-----'
.----------.
| |
| .---. | <- tube
| || || |
| || || |
`--'| |`--'
| |
| | <----- glass
| |
```

The body width of the static tube was about the same as RG-58.
When we got to the campground, another amateur was so impressed that I sold him one of my spare tubes :-)..

As I was driving back it dawned on me that with the number of amateurs on the network there must be an great number of ingenious tricks that you folks have stumbled across, I'd certainly be interested to here about some of them....
(come on, don't be shy).

410. How to support a Jpole antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 18:53:39 UTC
From: wa2ise@cbnewsb.cb.att.com
Message-ID: <1992Jul9.185339.12011@cbfsb.cb.att.com>
Source record: 287644

If I wanted to put up a J-pole antenna permanently, what is a good way
to support it? Is this design tolerant of nearby metal (like masts,
twin lead supports, etc)? Could I do the below and not mess the antenna up?

```
_____
!_______________/ \
! _____/ support grabbing onto plastic with wires
! removed about a foot above wire ends
!
!
! | | do not short this end.
! | | (when trimming for vswr, cut both sides)
! | |
metal mast | |
! | |
! 3/4 | | Technically-speaking, this is a 1/2
! wave | | wave end-fed antenna with a 1/4 wave
! | | matching section.
! | |
! | 1/4" gap
!<- 3 to 5"---->| | (trim for vswr _below_ gap)
! | | 1/4
! _| |_wave
!_____________/ | | \
coax ctr conductor=>* *<= coax shield
! 1 1/4"-| |
! -*- solder the twin leads together at bottom
!
another support grabbing ribbon at the point where the coax connects
!
```

I strongly suspect that the above will have problems, especially the metal
mast being only a few inches away from the antenna. The top support is
grabbing onto the ribbon with the wires trimmed away about a foot above
the top ends of the antenna wires. This should keep that support from
severely messing up the top. Maybe use a good stiff plastic mast
instead of metal? PVC? I would guess that I can use a twin lead support
to hold the antenna where the coax connects, and get away with it. Even
tape the coax to it.

What say, antenna experts?

412. Alinco DJ-580T undocumented features

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 19:25:47 UTC
From: t-dougf@microsoft.com
Message-ID: <1992Jul09.192547.22597@microsoft.com>
Source record: 287647

Being the crazy person I am, after noting that there were features on the DJ-580T that could be accessed by typing keypad numbers with the pad locked (FL symbol on), I went through and tried all 1000 #nnn combinations. I found the following things:

#120: Prints open/closed on the main band
#127: Same thing as above (or is it #128?)
#355: Just beeps

I have talked to the person who sold me the radio, who says he talked to Alinco, and he says he has no idea what these functions do. So my question to the net is, does anyone know what these functions do?

Finally, are there any other undocumented modifications or codes like the above, and what do they do?

Thanks,

Doug

413. FCC Budget Cuts (GEARVAKf)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-09 19:49:11 UTC
From: NELSON_M%athena@leia.polaroid.COM
Message-ID: <9207091948.AA27035@ucsd.edu>
Source record: 287646

Though this was first published ten years ago, it is just as pertinent today!

BUDGET CUTBACKS AFFECT HAM RADIO

Federal Communications Communicator Marvin Larpsnogg announced yesterday that budget cutbacks by Washington will impact Ham band availability. Larpsnogg stated that the unanounced shutdown of the ten meter band last Thursday was only a sample of "things to come." U.S. Amateurs quickly noted the event. Comments heard on fifteen meters ranged from statements like "Ten is dead this morning!" to "Can't even get across town on ten today!" Larpsnogg said that the band closures will be unannounced and more frequent and are related only to funding cutbacks. "There is absolutely no connection with government programs to limit foreign imports, although the JA prefixes will be among the first to feel the cutbacks," he explained. This is not the first time that Amateurs have been affected by government spending priorities. During the late 1960s, massive funding was diverted to the U.S. Lunar Landing Program and away from solar sunspot support efforts. The consequences were felt by Amateurs world wide, with lowered sunspot activity continuing for almost five years. Mr. Larpsnogg predicted that unless funding policies are reversed, we will see only fewer and fewer days when higher maintenance cost bands like ten and six meters will be opened up. In response to further questioning, Larpsnogg pointed out that in those instances where maintenance funding has been cut completely off, bands like 10 GHz and 3300 MHz have been dead for years! "Our funding for 220 MHz was only $14.98 last year, which was not enough for a single opening," he said.

For sale: Japan Radio Co. NRD-525 communications receiver

0.09-34 MHz continuous tuning, RTTY, CW, USB, LSB, AM, FM, FAX. 200 memory channels, two internal clocks, both flywheel and direct access tuning, and probably one of the best Passband filter systems on the market.

A truly excellent receiver that I no longer have use for since I have a Yaesu FT-1000D at the same location.

Regularly sells for ~$1,000. Asking $750 including the optional computer interface and serial cable. Includes original box, packing, and manuals.

--
Gabe Wiener - Columbia Univ. "This 'telephone' has too many shortcomings
gmw1@cunixa.cc.columbia.edu to be seriously considered as a means of
N2GPZ in ham radio circles communication. The device is inherently of
72355,1226 on CI$ no value to us." -Western Union memo, 1877

415. Re: CB Base Stations: Where to get them?

Yes,

You can try emailing a message to:

callbook@sat.datapoint.com

The contents of the message should contain a command like:

call KD4HRI

You will then receive a response with the callbook entry.

>My argument is that a lot of tapes are generated from computer anyway,
>and that, once again, given a properly designed program and an adequate
>speaker, computer-generated code can not be distinguished from a code
>tape.

>Any other VEs out there care to comment on this?

I'm not a VE, but I feel somewhat qualified to comment.
There are two basic methods used in code teaching. Let's say
we're sending practice at 5 WPM. If the characters are sent at
the 5-WPM rate, you have what I'll call "standard" code. If,
though, the characters are sent at 18 WPM, but the spaces
between characters are lengthened, you can be sending code at
a rate of 5 WPM. This second method has become known as the
Farnsworth method, and is used by ARRL in our tapes. ARRL VEs
are asked to use this method when giving exams. We stick with
the 18-WPM character speed up to 13 WPM. Of course, 20-WPM
practice characters can't be sent at 18 WPM!

Some VEs prefer to send at the standard rate, so we
offer a tape called "13-14 WPM Practice." It does not use
Farnsworth spacing. All our other tapes do. Our best-selling
computer program is GTE's Morse Tutor/Advanced Morse Tutor.
These programs allow you to specify standard character spacing
or Farnsworth. In the case of Farnsworth, you can select the
character speed. You might, for example, want to practice with
22-WPM characters when preparing for an exam in which 18-WPM
characters will be sent.

Now, the problem. If you have practiced with a
method NOT used on the exam, you're going to have a harder
time. The characters will sound either too fast or too slow.

I personally (and since we sell 'em that way, I guess I can say "Headquarters") feel(s) the Farnsworth method is a better way to learn. By learning the characters at the faster rate, it's easier to pick up your speed--faster speeds just mean less time between characters to think. I believe most ARRL VEs are using Farnsworth these days. There are other VECs, so I guess candidates need to find out beforehand what method is used by the group giving the exam, or just tough it out.

Our tapes were generated by computer. The major difference between tapes and programs is, the programs are more versatile. You can memorize a tape, but a computer program can generate random stuff over and over. The BEST practice is to get on the air (assuming you have a license) and try to work other stations. Having to copy what the other station is sending makes you concentrate harder than you might when just listening to a machine. Also, the distractions of noise and interference, while annoying at first, seem to help develop confidence. W1AW should be audible in most of the US and Canada, and sends computer-generated practice and bulletins.

Good luck and 73. --Jim, KR1S

>I will agree that CW is almost dead on the ham bands, however.

Now where did you get this idea? Night after night I've had problems finding a place to call CQ on 20 meters. I've had the same problem at times on 15 and 40 also. In fact I've given up and went into the phone portions of the bands so I could at least find an open spot! At times I've gotten kinda ticked off at the digital folks for taking up so much space. If anything the CW portions need more room not less! Of course the guys who can't spell Morse right or do CW would really scream!

The SB line in the body of the article on USENET is of value; I use it when I pick the article off USENET and repost it locally on the ham BBSs around town.

Doing that gets it here several days faster than if it had to travel only over ham circuits.

Not the issue. The issue is the creation of an island subculture
that *refuses* to learn or speak english; and refuses to cooperate
with existing QSO's or nets...or follow the rules, like Part 97.

>
>What does deliberate interference have to do with a person's native

>Speaking of rude L.A hams, I don't hear too many non-English speakers
>(or even non-American accents) on the 147.435 "Mt. Wilson" repeater...
>
Persons that are militant in the refusal to learn or speak english
are the same ones that are rude, disruptive and refuse to ID in english
even though they are FCC licensed. Most of these stations (like 99%!)
on 10 & 15 meters are hispanic operators, it's just that simple Phil!

The .435 machine is a completely seperate issue, and you are correct
in mentioning that there are very few non-english speakers on that
particular repeater..the reason is quite obvious and need not be
elaborated on. I cannot be expected to speak for Roy Tucker's
little experiment, I feel the FCC should pop Burton and the
rest of the jammers and bootleggers, but the ARRL OOs and the
FCC Field Engineer disagree with me...oh well, maybe YOU can convince
them to do their job on this?? I wrote letters..dozens of them, have
you Phil??

>I guess we should have bought the Berlin Wall (complete with land
>mines, attack dogs, guard towers and shoot-to-kill orders) on the
>cheap when we had the chance to protect the border against all those

>dirty Mexicans, eh?
>
>Phil

Your use of hyperbole is noted. Use me as a laugh Phil, but just
remember some of us did sound the alarm in time for preventitive
action to have been taken. That you ignore the warning merely
proves that even you have a blind spot. I favored no-code and
I still think that it has been good for the Amateur Ranks, but
America is supposed to be a multitude of peoples with a *common*
language and desire for freedom. We cannot permit any group
to secede-in-principle by refusing to speak the language.

One more point: I'm not calling anyone "dirty"... Ok? '73

427. Field Day and 2 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 00:37:32 UTC
From: paulz@hpspdla.spd.HP.COM
Message-ID: <32920098@hpspdla.spd.HP.COM>
Source record: 287672

During Field Day in W6 land, there are always some activity on 2 meter simplex. Some clubs have a 2 meter station for the entire contest period. Most of the others use that band as an alternate when the HF ops need a break, or the equipment needs attention. At times, the pile ups can sound like more like 20 meters!

This year, on short notice, I found that I would be on the East Coast in late June. I took along a 2 meter mobile station, and hoped to make a number of contacts. As it turn out, I drove through (or within range of) 6 different ARRL sections FD weekend, but never found any <contest> activity. All of the simplex frequencies I tried were dead. :-(

Where was everyone?

Well here I am a working on the code and saving up the $ for a new HF rig and
so I was calling around to a few places to see what they had set up that I
could try out a few rigs before plunking down my hard earned cash and a major
mailorder firm within driving distance that used to carry Ten-Tec equipment
tells me that you can only get it from the factory and that they were not
very impressed with the quality of there rigs. So the question to the net
is "How do owners of Ten-Tec Omni VI rigs feel about them?". Is the mail
order firm crying sour grapes cause they lost the distributership or is
there problems with the new rigs (other then the firmware proms which I
already know about and have been addressed by ten-tec). I wont be buying
right away { if (codespeed > 15) then buy_new_rig else wait} but
any comments greatly appreciated. 73.

Making them learn Latin would be _better_ population control.
Or making them pass a physical fitness test.
Why pick Morse?
Why have a _pointless_ initiation ritual at all?

>Without the code
>requirement, persons already versed in electronics would have an
>advantage over non-electronics types.

As they should. A ham license is a license to _design and build_ as well as operate radio equipment. We are the only radio service in which people get to build their own equipment (without FCC inspection) and choose their own frequencies (within bands of course).

By the way, this argument has been beaten to death over the past two years.

433. Re: Help-ICOM 2AT pwr increase/bigger batt?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 05:55:28 UTC
From: john@prusik.com
Message-ID: <1992Jul10.055528.7949@prusik.com>
Source record: 287667

The ICOM 2AT is designed for 8.4V max input with a rated power out of 1.5W. Many of ICOM's newer radios will take the higher voltage battery packs, and give higher output power, for example an IC-04AT puts out 2.5W at 8.4V and 5W at 13.2V.

I think I've put a battery pack with more than 8.4V out on my 2AT and I don't remember any problems. But my father, who is looking over my shoulder, remembers getting funny squeeking noises out of his 3AT with ~12V battery pack.

"I'd say u puta bigger dan 8.4V pack on a 2AT, and yu may get smoke!"

Yep... I agree with you 99%... The remaining 1 % is Amateur Radio
software... Unless I'm missing out on something (after all I am in
Australia) there seems to be no where near the amount of ham
software on the Mac.

What Mac satellite tracker do you use? What Mac antenna design program
do you use? Do you use the Net/Mac and IM/Mac combination for TCP/IP
work... Full credit goes to the authors, particularly for the user
interface in IM/Mac, but there is no way that these programs have the
functionality of NOS... Has anyone managed to make NOS work on Soft PC???
I've tried but have succeeded only in obtaining some rather spectacular
system crashes.

If anyone has some suggestions for Mac Ham radio software I'd be more
than pleased to hear from them...

Sure, Harold, I'll offer my $0.02 worth:

ARRL/VEC Morse code examination audio cassette tapes are indeed computer generated (since no one offered to sit at the hand key and send all the texts :-)). All kidding aside, computer generation is exactly what is used by most VECs. In fact, the software program distributed for VE Team use by both the ARRL and the W5YI VECs are written by the same author.

The differences, if any, between computer generated practice and audio cassette exam tapes will differ in only a few ways. They are:

1. Increased character speed (if the Farnsworth technique is used) versus standard speed. At ARRL/VEC-coordinated code examinations, the character speeds for both our 5 and 13 WPM Morse code examination audio cassette tapes is 18 WPM. Inter-word and inter-character spacings are increased to balance out the message to either 5 or 13 WPM. W1AW Morse code bulletins at or below 18 WPM also use a character speed of 18 WPM. Lastly, three out of four of the League's Morse code practice audio cassette tape sets have their character speeds at 18 WPM--up to 18 WPM practice--as does the "Now You're Talking" companion Morse code package entitled "Your Introduction To Morse code." Above 18 WPM, the overall speed and the character speed are equal (20 is at 20, 22 is at 22, etc.). Other VECs

use slight variations of the character speeds used by ARRL. Feel free to contact your local VE Team for details.

2. Quality of the audio cassette tape itself, or its player (not forgetting effects of weak batteries in the player) can have a great effect.

3. So can examination room acoustics. The REAL examination may sound completely foreign to an examinee if there are room echoes, examiners whispering at the head table or other man-made noises in the room. Many VE Teams have chosen to isolate audio to Morse code examinees by setting up strings of headphones which are worn by code examinees during the test session.

4. Audio shaping of the Morse code note may also effect the examinee's ability to immediately recognize a character. At ARRL, we key a sine-wave generator (with wave shaping) between the computer and the recording device to ensure that the Morse code audio note is pleasant to the ear. In comparison, the audio sidetone output from many PCs can include multiple harmonics; and even some add-on audio boards such as the "Soundblaster" can include low level clicks, hums or whines.

5. Exam jitters (nervousness) can make my items one through four above insignificant in comparison to what our body and brain tell us at the very moment the exam is to commence. My advice, and experience, is to go into the exam with an upbeat and positive attitude--expecting to do your best.

6. Lastly, if you are already licensed and have a transceiver; or if you have a receiver; don't be afraid to turn it on and copy Morse code messages--or if licensed, make some calls and contact some folks. On-the-air activity (receiving specifically) can be some of the best experience you can get. The air waves are subject to as many variables as one might find at a real examination; including natural and man-made noises; frequency variations, hums, etc.; and all speeds, forms and shapes of Morse code characters one might ever expect.

It's commonly mentioned that practice makes perfect. I agree--but to reinforce that point, practice in taking actual exams helps too. Don't be afraid to go and take an exam--following the guidance in item five above. If you pass, you'll certainly have reason to be glad you tried. If you fail, and some people do, you will have gained the experience of having taken the test; knowing what to expect at the test session; recognizing the three or more volunteers who will most likely be the people you'll come to see at your next exam opportunity; and, generally, feel more comfortable about the whole experience having already done it once before.

And now I'll initiate my <KEYBOARD OFF> command.

73,

438. Re: Code Tapes vs Computer-Generated Code

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 13:01:16 UTC
From: hayward@gargoyle.uchicago.edu
Message-ID: <1992Jul10.130116.17894@midway.uchicago.edu>
Source record: 287673

In article <2w8l6n-.mjr@netcom.com> mjr@netcom.com (Matthew Rapaport) writes:

:Software provides this feedback and therefore, when
:properly used, will easily out perform tape. My technique was daily
:drills of 1 to 1.5 hours per day, half of that in the morning, and half
:in the evening. Two weeks exactly, and I was copying 90% at 7wpm I
:easily passed the 5wpm test.
:
:Note that I did my COPY by hand. That is I used exercises that were
:copied on paper, with a pencil, not on the computer keyboard (I did
:these too, but spent 75% of the time hand copying). I think this is very
:important... To reherse the way you're going to do it on the test...
:

I completely agree on the need to copy by hand from the beginning; I
tried to get to 5 WPM just by listening to tapes while driving my car;
I could copy at about 8 WPM by the time of the test, but I learned at
the test that I hadn't trained my hand to "hear" what my ears did.

But in going to 20 WPM, I took a different tack that did Matthew, above.

I found that my attention started to wander after about 15 minutes of
practice and my productivity dropped quickly. Since the tests at the
session are slightly longer than 5 minutes, I set my computer to send
me 6 minutes of code. That way I could maintain my attention level for
the entire time, and it worked very well for me. I got to 20 by
studying twice a day, 6 minutes at a time.

(And I have subsequently found that, in most actual QSOs, the typical
transmission is less than or about 5 minutes long; then it is turned
back to you).

>
> Linda Stocks, AA6MR

I am with Linda. I lived in Rolling Hills Estates for a while and worked in
LA. I feel Erik should leave his prejudices silent. I did not notice any
of this stuff on any repeaters. I did not have a 10 meter rig with me at
the time but I can assure you that being Hispanic does not have a damn thing
to do with it. Come listen to the bozo's on the bottom end of 10 meters here
and very few if any I hear a speaking anything but `American.'

Bob

440. Examination Opportunities Scheduled 7/07/92 through 9/21/92

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 13:57:14 UTC
From: bjahnke@arrl.org
Message-ID: <262@arrl.org>

AMATEUR RADIO EXAMINATION OPPORTUNITIES

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

AFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

If you've recently passed your initial examination for an Amateur Radio license, or if you've just upgraded, please accept our warmest congratulations! Now that you've passed the test, receiving your license in the mail is the next step.
Since the FCCs current license processing time is at about seven weeks, and since there can be additional time required within the volunteer examiner system of two weeks or so allowing your VE Team and VEC (if for Technician class or higher) time to process your application, your license might not arrive for up to eight to ten weeks.
To keep your wait for that new license or upgrade as short as possible, we are taking the following steps to give you the fastest possible service.
We have begun providing our VE Teams with express OVERNIGHT

mailers for the return of applications from ARRL/VEC exam sessions to us at the VEC--and we at the VEC have begun sending our daily packages to the FCCs Licensing Facility via an express OVERNIGHT service.
We are also encouraging our VEs, and imposing the same emphasis upon ourselves, to process examination packages as quickly as possible to expedite your license.
Having implemented the above procedures, the ARRL/VEC wants your wait for your new license to be as short as possible.
If you have any other suggestions about the program, or services we provide, please feel free to contact us.

THINGS TO BRING TO THE EXAMINATION

Be prepared to bring the following items with you to VEC examinations: Your original current FCC-issued Amateur Radio license (and a copy of it)--if you are licensed; Any original Written or Code Element credit documents (CSCEs) which are currently valid; Two forms of identification (e.g., a photo-ID or drivers license and another item indicating your current name and address); A calculator (if necessary); A pen and two pencils; and, the applicable examination test fee ($5.40 for 1992 ARRL/VEC Test Sessions).

TECHNICIAN CLASS GRANDFATHER CREDIT

If you hold a Technician class license which was issued prior to 3/21/87, you are not required to take the Element 3B (General class written) examination if you can provide a copy of your FCC-license dated before that date. If your licensed has since been renewed, and if you don't have a copy of the pre-3/21/87 license, you must seek a verification letter from the FCC. To do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 and request a Form 1010-B Verification Letter verifying that you were licensed as a Technician class prior to 3/21/87. After you receive that form from the FCC, bring it to the test session with you in order to claim your deserved credit.

LOST LICENSES

If you have lost your license, be aware that VECs are not permitted to submit any upgrades to the FCC without a copy of your current license attached to the 610 form. In order to expedite your upgrade, you must write the FCC and request a replacement license. Since that can take several weeks to arrive, we recommend that you also request a Form 1010-B verification letter from the FCC which will arrive in a couple of weeks--and is legally binding license document.
You may use that form as a license until your Form-660

license arrives. The original and a copy of Form 1010-B must be brought to the test session verifying that you are currently licensed--the copy of which will be attached to your upgrade application (in lieu of an actual Form-660 license copy). To request the Form 1010-B Verification Letter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you--also be sure to request that they send you a Form 1010-B Verification Letter verifying that you are licensed.

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. For information and applicable forms, send a SASE to the ARRL/VEC, 225 Main St, Newington CT 06111, and request our Handicapped Information Package.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, you may contact the coordinating VEC.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
Test fee for 1992 is $5.40.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = DeVry ARS, Temporarily contact the Sunnyvale VEC ARC for
information at PO Box 60142, Sunnyvale, CA 94088-0142;
408-255-9000

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.
Test fee for 1992 is $4.00.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473. Test fee for 1992 is $3.00.

J = Jefferson ARC, PO Box 73665, Metairie, LA 70033; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-434-6087, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999

H = Mountain ARC, PO Box 234, Cumberland, MD 21502; 304-289-3576

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 92044; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60142, Sunnyvale, CA 94088-0142;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27260;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2545; 615-688-7771. Test fee for 1992 is $5.40.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
Test fee for 1992 is $5.40.

>

I can't help you there.

> What other (if any) DSP-based modems are there on the market now?
>

There is AEA's DSP1232 (soon to be available in stores) and the fully dual ported version the DSP2232 which is available in stores (at least in the US) now.

After you buy all the options which make the DSP-12 support downloadable new code, the package of source for the host code (no documentation except minimal supplied by others, not LL Grace), the DSP-12 and the DSP-1232 will be the same price. You will not get source for the host code with the DSP-1232, but you wouldn't want it. It is for the HD64180 and only Steve Stuart, N6IA, AEA's wizard has been able to get that thing to hum. I wrote the DSP code for the DSP engine in the AEA product.

> I got my tech. license recently. About a month after that I changed my
>address. So my question is do I have to notify the FCC or ARRL about my change
>of address ?

You must notify the FCC, use a 610 form there's a box for address
change. Send it to the address at the top of the form. Don't forget
the xerox of your current license. They'll send you a replacement
with the new address, and a new 10 year expiration date,
otherwise don't worry.

You needn't notify the ARRL unless you are an ARRL member (and still
want to get QST and league junk mail). Then you do it just like you
do with any magazine.

I'm part of the silent majority that doesn't really care, but I would like to point out that at least the disk-space problem can be mostly ameliorated by using the Supersedes: header line to cancel the old copies of the FAQs when new ones show up; this way, sites that expire longer than 14 days aren't penalized (except in modem cost, of course).

445. Just have fun

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 14:33:38 UTC
From: pjd@siemens.com
Message-ID: <97105@siemens.siemens.com>
Source record: 287528

I used a mixture of tapes, computer generated code and W1AW transmissions to pass at 5WPM and increase speed to 13WPM for the General. I found that copying a variety of speeds, spacings, pitches and whatever was quite helpful. I also wrote a C program to generate sample QSO's and would load its output into one of the Morse generators for more realistic practice.

Now some folks will recommend getting over the 5WPM hurdle and getting on the air. This approach would expose you to the same kind of "human variability" that I simulated with tapes, computer and W1AW. Even though I got into the hobby for the educational experience and (soon) packet, I think I missed out by NOT learning to send. I even received a straight key as a Christmas present from my father-in-law!

[Speaking of variability. Check Aviation Week (page 56, 18 May 1992) for brief blurb about Siemens, code and HF. Looks like completely reliable copy of the human fist is still a ways off.]

I always practice at 2-3 words above my target code speed and worked to get a 5% maximum error rate before testing.

EVEN SO!

My 13WPM General test was nearly a disaster. I woke up with a headache, felt lousy and took the test in the middle of a Hamfest zoo. Error rate at crunch time was >>5%. Thank goodness natural language has so much redundancy! I passed. I offer this last comment as encourgement to anybody who is inclined to go for it!

Just do what`s fun! Believe it or not, I eventually stopped hating the code and began to enjoy my practice sessions!

OrbiTrack is a very nice satellite tracker.
What does IM/Mac do, and if its valuable, where can I get it?

CLARIFICATION--

I was misquoted somehow, Morse code is hardly used anymore outside of Amateur Radio, even the US military has phased it out. It offers us all an equal challenge in upgrading as 99.9% of us have no previous knowledge of it. It still is an extremely bandwidth efficient mode. If it was not required, most would choose phone only, and then you would have a real problem! How many of those CW qso's can you fit in place of a single SSB bandwidth?? POPULATION, MUST be taken into consideration in licensing.

Russ, KA2KFH

paulz@hpspdla.spd.HP.COM (Paul Zander) writes:
: This year, on short notice, I found that I would be on the East Coast in
: late June. I took along a 2 meter mobile station, and hoped to make a
: number of contacts. As it turn out, I drove through (or within range
: of) 6 different ARRL sections FD weekend, but never found any <contest>
: activity. All of the simplex frequencies I tried were dead. :-(
:
: Where was everyone?

This is strange....I heard quite a bit of activity in the Philadelphia
area, as I was visiting there for the weekend. But here in New
England I understand there was some FM activity. Here on the East Coast
there tends to be more voice activity on 2m SSB than on FM during FD.

I suspect that *quite a bit* of the activity was on 2m PACKET. I
understand that quite a few beacons were running and that there was a
lot of activity through the various NetROM and TheNet nodes.

>your problem exists.

Well, I don't even live in California - but on ten meters in
the novice/tech segment of the band there IS a problem with some
spanish-speaking persons who don't seem to have any respect for the rest
of us. They may be domestic, as Erik suggests, or they may be DX
as some others have suggested OR maybe some of BOTH.

I know that the segment from 28.3 to around 28.35 is just trash
from my QTH. Whoever is there doesn't ID, *EVER* from what I can hear.
They NEVER ask if the frequency is in use, but just pop up on whatever
frequency they want and start shouting Hola! Hola!, drawing the words
out and making damn sure everyone knows they are there.

(and the hostility they are drawing/causing is also notable - I heard
one fellow crank up the power and say, "take that hola crap and stick
it back up your ass where it belongs!")

To me, it really doesn't matter if they are DX or domestic
with ONE important exception - if they ARE domestic we ought to be
putting a stop to it. If they are DX then there is probably not
a lot we CAN do about it, save for a terrorist raid on their antennas....
:-) :-)

Ten meters *is* turning into somewhat of a cesspool, I'm sorry
to say. Some of the crap that's been going on at 28.325 has irritated
me to the point of calling the FCC and *repeatedly* complaining
about it. The last thing I heard is some idiot doing what is basically
broadcasting about computers and doing it with an AM signal that
is splattering all over hell's half acre! It is a pretty sure bet
that these clowns are in Texas, although I think I really shouldn't
say just HOW I know that. All I can say is that I hope the FCC gets
'em before some of their fellow Texans do.....and some of them are
pretty HOT over it....

These guys use the most disgusting and occasional obscene
language on the air that I have EVER heard. Much of even *11 meters*
is less obnoxious than these.....these....so-called "hams".

453. Alinco DJ-580T mods..

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 15:51:41 UTC
From: jga@dreaml.wariat.org
Message-ID: <u5aPNB1w164w@dreaml.wariat.org>
Source record: 287542

Is there a mod to allow 800Mhz transmit for the Alinco DJ-580T? I have
heard there is. Thanks for any info in advance.

|> the following things:
|>
|> #120: Prints open/closed on the main band
|> #127: Same thing as above (or is it #128?)
|> #355: Just beeps

I also noticed this one:

#123

This one lets you set the touch tone send rate 1=very fast ... 9=very slow and 0=even slower (like you'd expect 10 to be). Every time you access this code, it adds one to the current value and displays it. So if all you want to do is read the value without changing it, you have to enter #123 10 times to get it to count all the way around (pain). It keeps separate values for VHF and UHF. The RESET procedure will put it back to factory values. I came across this by trying some of the codes, but I wasn't as persistent as you.

I also assume you intentionally left out #508 which is in the manual (cross band duplex).

455. Learning S'mores Code

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 16:15:44 UTC
From: tonyp@cnvxla.COM
Message-ID: <1992Jul10.161544.6432@convex.com>
Source record: 287533

My friend and I learned Morse code in Jr. high school.

We studied it in alphabetical order, added a new letter
every day or two.

Neither of us had a problem with not being able to
recognize a specific character, as some of the other
hams have said they experienced from learning in
"all the dot characters first" style.

Is this a coincidence?

What is the reason for learning "all the dots first" mode?

How do "new code-ies" like the Farnsworth method?
(sounds like a great idea to me).

|>
|>Let's not forget where the requirement for CW came from in the first place.
|>First, international treaty requires that anyone licensed to operate in the
|>HF bands know CW, so the FCC is just complying with treaty requirements.
|>

You're playing old tapes. We all know where it came from. We all know you have to "demonstrate a knowlege of International Morse Code" (whatever that means) to operate HF. We also all know that there is no correlation between that point of the treaty and 20wpm, 13wpm or even 5wpm as gates for the US licensing system.

|>Second, and perhaps more important, one of the main reasons that hams
|>were given HF bands in the first place (HF band space was hotly contested
|>in the days when this policy was formed) was to provide a pool of
|>self-trained
|>radio operaters to serve in the military in times of emergency. In those
|>days, at least, CW was a principal mode, and any op who couldn't hack the
|>code was worthless to them. Nothing comes for free, and there's lots and
|>lots of folks who would love to have our HF bands. Knowing the morse code
|>is part of our end of
|>the deal that gets us the bands in the first place
|>

Again, this is all old material. Yes, we are supposed to provide a pool of self-trained operators, and yes, CW was once a commercially useful skill. Times have changed. The licensing has not.

From: admitq@violet.berkeley.edu
Message-ID: <13kg2nINN1ot@agate.berkeley.edu>
Source record: 287536

(Please don't post to the newsgroup, unless you really think everyone needs to see it. Personally, I'm tired of skipping over 100's of articles over a two week period, on the availability of a certain battery, how to ID, ad nauseum. I will summarize and post the best of the responses here if needed.)

Does anyone out there know of reviews in QST/CQ/73, etc. of these two rigs? If you own--or have owned--either one, I'd like to hear from you. If you don't like them, why? How much did you pay (new/used)? Are the U/VHF modules for the Yaesu multimode (their price seems too low for that) and can they be linked easily (ie: crossband linking)? What's their output? Any "gotcha's?"
Thanks for the bandwith,
73,
Michael/KC6UFR

460. Code Tapes vs Computer Programs

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 17:15:45 UTC
From: phillips@pennsy.med.jhu.EDU
Message-ID: <9207101720.AA05265@pennsy.med.jhu.edu>
Source record: 287538

My guess is that your VE friend is making a fairly broad generalization from limited experience. When I am working sessions, I am _much_ too busy concentrating on the testing and the forms to really find out how people studied the code and correlating it with the test results. Either he doesn't test that many people, or he only asks a few people every once in a while. Either way, it probably is too limited a sample to draw conclusions.

I learned my code using tapes, computer programs, and by listening to W1AW slow and fast code practice. A tape or a program alone can lead to trouble if you work them so much you memorize the vocabulary, but any one program allows you much more variety for your practice than any one set of tapes. I guess the programs do have one drawback in that they are so flexible that you can practice under conditions that are easy for you and fool you into thinking you are better than you really are. One thing to be wary of is whether the tape or program you are using really is giving you code at the speed you think it is. I was using one program for a while that turned out to be sending about 10% slower than the speed it was set for! An old tape player can be going a bit slow, too.

My advice is not to limit yourself to just tapes or programs, but to practice using every available method, and practice to a faster speed and under worse conditions than you will be faced with when you go for the test. That way, you have a much better chance of passing.

Good luck!

I have received numerous notifications from those who have not even had the courtesy of a "thanks for volunteering, but we don't need your assistance". For those who have coordinated this effort, enjoy the tall ships and have a good time. And thanks for the underwhelming feedback that you supplied to the many hams who were going to donate their time to you.

Jay

)ing softwares for the Apple Macintosh ?

Huh? Since when does an ATV transceiver need computer software?

[Original article did not have the have the word "Antenna"
in the Subject: line. This is a re-post]

I'm looking for a source for a good CB base station antennas that can be converted for use on the 10m Ham band. I want to do this for cost and space reasons. Any source for reasonable cost 1/4 wave or 5/8 wave ground planes or other CB base stations than can be converted to 10m use?

It seems like the former Yugoslav nation has just had all of its radios unlocked. At least, on 20m cw, there sure are a lot of stations working contest-style runs like crazy. I've never been that much of a serious DXer, but I always have liked 20m CW and I've always QSLed 100% (internationally via the bureau). I've gotten caught up in working every one of these guys I hear (after all, a QSO only lasts 5 seconds: 5NN TU by each station and you're done!). Does anyone have any advice on QSLing to this region? Are green stamps mandatory? Will the bureau work? I had a YU station tell me to go ahead via the bureau last night, and another Croatia station give me an address, but these long-winded examples seem to be the exception. Are these guys doing the 5-sec QSOs to help americans get new calls, or are they fishing for green stamps? Hope that doesn't sound insulting, but most of these guys ABSOLUTELY do not want to exchange anything but the report -- anything else thrown in and they just come back on top of you. I will say they sure have good fists at 25-30 wpm! Wish I was that good.

BTW, someone asked about ZA1A a few days ago -- about whether that call had been retired and/or who was it? I'd also like to know -- worked him a couple of days ago. What's the best way to ensure getting his QSL card?

[escape hatch: for GUY, HIS, HIM, etc., read your
favorite sex/lifestyle/politically correct expression/etc.]

SB DX ARL ARLD036
ARLD036 DX news

Thanks to Bob, WB2CJL, and the Western New York DX Association for
the following DX information.

YUGOSLAVIA. Amateurs in Croatia are now using call signs from the
9A block. The DXAC is considering the addition of Croatia, Slovenia
and Bosnia-Hercegovina to the DXCC Countries List.

PITCAIRN ISLAND. Brian, VR6BX, has been very active on RTTY. Check
between 0100 and 0330z around 14085 and 21086 kHz. QSL Brian Young,
PO Box 21, Pitcairn Island.

SNAKE ISLAND. 4K5ZI has been active and will be on until July 25.
This island is located in the Black Sea. Cards for this are not
being accepted by the DXCC Desk at this time.

CENTRAL KIRIBATI. Jim Smith, VK9NS, has finished his operation from
Wake Island and has received permission and permit to operate from
T31. This should be his next stop. QSL to his home call.

NORTH COOK. Warwick, ZK1WL, has been active around 14226 kHz. He
is the only resident on Penrhyn Island at this time.

BERMUDA. WB2YQH returns to Bermuda to operate VP9CB between July 11
and 18 from Sandys Parish. Operation will be on 40 thpough 10
meters including WARC bands, CW and SSB. CW will be emphasized due
to the sparse local activity on that mode. QSL VP9CB via WB2YQH for
this operation only.

UNIVERSAL EXHIBITION SEVILLA EXPO 92. Special awards are available
to amateurs and SWLS worldwide. Various prefixes are appearing on
the air. Each AM7, AN7 and AO7 contact is worth one point. Each
```

AM92, AN92 and AO92 is worth two points. A contact with special station EF92EXPO is mandatory and counts as five points. All bands, including WARC, are valid. To qualify for an award, Spanish stations must have 100 points, European stations 73 points, United States stations 50 points, African and Asian 40 points. All other areas 25 points. The award period runs to October 12, 1992. For further info, write to URE Sevilla, PO Box 479, CP-41080, Sevilla, Spain.

SOUTH GEORGIA. Keith, VP8CBK, is making schedules and attempting contacts, although propagation conditions seem less than cooperative. He is on the bands listening for calls on Sundays and Tuesdays between 1500 and 1700z, and has been on the GW3CDP net. Also check for his RTTY on 21085 and 28085 kHz. QSLs go via K1EID.

WHERE'S THE WHITE OUT? Here is correction to ARLD035 of July 3, 1992. In the next to the last paragraph entitled QSLs, WN4KKN/ZP5 was incorrectly listed as WN4KNN/ZP5. Properly routed QSL requests for this operation have long since been handled. Any delays in QSLs are due in large part to misaddressed requests. QSLs should go to AA5BT.

IARU HF WORLD CHAMPIONSHIP. Your Headquarters station, W1AW, will be active in the contest this weekend from 1200z Saturday July 11 to 1200z Sunday the 12th. Regularly scheduled bulletins and code practices will be suspended for this operation. The contest exchange is RST, and your ITU zone. We hope to work you.
NNNN

Good Luck on DX de KB8NW/OBS

468. Re: Ten-Tec Opinions Sought

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 18:40:41 UTC
From: kawai@Csli.Stanford.EDU
Message-ID: <1992Jul10.184041.18381@Csli.Stanford.EDU>
Source record: 287546

Tim Matie (N2MES) asks about Ten-Tec reputation:

> So the question to the net is "How do owners of Ten-Tec Omni VI rigs feel
> about them?".

I have no comment on Ten-Tec transceivers, I'm afraid, but I do have thoughts on Ten-Tec HF linear amplifiers. Having used a Ten-Tec Titan for a while, and also judging from reviews in QST and other magazines, I believe Ten-Tec offers high quality, conservative assembly, detailed documentation, and eye-pleasing packaging on their linears.

It is too bad that Ten-Tec seems to be moving towards allowing factory-direct sales only. Their actual sale prices are going up, too. Perhaps it's the right time now to buy a Ten-Tec amp from a mail-order firm before they sell out their stock.

As far as HF transceivers go, well, being Japanese by birth does tend to push me towards Japanese rigs, but now that I work for an American company, "Made in the U.S.A." does carry a lot of weight (smile).

Seriously, all things considered, I am personally considering the Kenwood TS-850SAT (the one with internal antenna tuner). Seems to me it's the best value for the money. The top-of-the-line rigs, such as TS-950SDX or IC-781 or FT-1000, are almost 30 to 40 percent profit, I would imagine. Better cost-performance value can be found in the second-from-the-top rigs, in my opinion.

>I seem to remember seeing before I got my ticket somethng about a net of
>USENET users on 10 meters on Saturdays. Is that still active?
>Freq & Time?

I've been somewhat busy and thus not around for the event, but I'm going to make an effort to be on tomorrow (July 11) AND next week (July 18).

Time and place (as summarized in my .sig):

1700 UTC until about 1900 UTC Saturdays

I generally try to hang out at either 28.410 or 28.390 - back when the sunspots were hot (pun :-), we had to worry about qrm. I doubt that will be much of a problem these days, but just in case it is a good idea to scan 5 to 10 KHz on either side of the two "primary" frequencies above (i.e., look from 28.380 to 28.420, but I really try to stick around 410 or 390).

>of this stuff on any repeaters. I did not have a 10 meter rig with me at
>the time but I can assure you that being Hispanic does not have a damn thing
>to do with it. Come listen to the bozo's on the bottom end of 10 meters here
>and very few if any I hear a speaking anything but `American.'
>Bob

Oh alright, fine. I won't say another word...it's not my problem either..
you people seem all too willing to attack the messanger rather than analyze
the message; that says quite a bit. As to the facts, I would suggest that the
doubting Thomas' amongst you contact Phineas J. Icenbice and ask about the
flood of mail he has received from amateurs in the SFV and surrounding areas
regarding the issues of unlicensed Hispanics envading the 10 m band, as well
as the licensed Hispanic amateurs that are not following the rules, especially
the ID IN ENGLISH as per part 97. "My prejudices"...screw you Bob! I haven't
got any prejudices except against people that won't play by the rules, or stick
to the subject! You've been out of here for a while..your view isn't even close
to being representationally accurate in terms of what's happening NOW! Linda's
comments are less acidic, and perhaps she doesn't operate 10 meters in L.A. or
have to tolerate the situations I encounter living in the SFV and driving to
and from the Santa Monica area..at least she was polite. I'll return the favor
and be silent.

472. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 21:20:41 UTC
From: tkelso@afit.af.mil
Message-ID: <1992Jul10.212041.13955@afit.af.mil>
Source record: 287348

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

473. RadioShack 4000ma D-Cells on sale / Building a pack

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-10 21:47:03 UTC
From: gary@kimbark.uchicago.edu
Message-ID: <1992Jul10.214703.12254@midway.uchicago.edu>
Source record: 287550
Cross-posted to: rec.radio.amateur.misc,alt.radio.scanner

Radio Shack has their "high capcity" NiCad D-cells on sale for $4.95 each. Sounds like a alot of money. But, these are 4000 mah batteries. Thats 6 times the capacity of the NiCad AA cells.

Be aware that a lot of D-cell Ni-Cads are really C-cells in D-cell cans. Typical C/D cells are 1800ma (Millenium from Gates Energy Products). This is also the case with the "regular" Radio Shack D-cells -- they are really only C-cells.

Good time to build a "big pack" for handhelds, scanners, etc. Its expensive, but not nearly as much as ICOM or Kenwood want for their 1200ma 12v packs.

I put together a 7.2V 4000ma portable pack for extended scanning, freq counting and HT use for about $35. Beyond the batteries, RS has D cell holders that can accomadate 4 cells. These also have convenient holes such that you can bolt 2 holders together (8 cavities). The local Walgreens has a "film pouch" that is used to carry film. This pouch is padded and has a loop in the back to thread a belt through. Two of RSs 4 cell D holders bolted back to back fit perfectly in this padded pouch. Solder the connector of your choice to the tabs on the battery holder. Works great.

Be aware that these D-cells need to charge at 400ma for 14hrs. So, take that into consideration as well.

Gary

>
>Make sure you have some sort of documentation (ie. Dates and times that
>you triangulated on the person and what they were doing, their name and
>the store they work at.)

Don't be too hard on Tandy. I am shure they don't operate more 'illegal' than any other HAM store, if they do at all.
I have witnessed a Dutch HAM shop selling 70 cm handhelds to non-hams ('use them only on 433.925, the ISM frequency, and use only low power' 'you really should get a license for this'). I am shure this happens at US ham stores as well, unfortunately. Even a registration system devised by the Dutch Authorities did not prevent this.

If you like having a Tandy shop around, give them a break. For various reasons, InterTan (The International Tandy Organisation) announced to close every tandy shop in the Netherlands. In one month time, you will not find a single Tandy shop here anymore. All employees are fired.
If anybody wants a Radio Shack scanner here, they will now have to import it themselves!

As for people operating illegally on the bands, I remember what one of the PTT transmitting hunter officers said in a lecture he gave: 'usually, it are one's own fleas that bite'. This has been proven again (unfortunately) two weeks ago when the authorities hunted and found somebody with a license that has been harassing our repeater for months now. By now, he should have lost his license and equipment impounded.
Unfortunately, he wasn't the only case around here; I hope he was the last for now and things will be quiet for some time to come.

Moral: If you want the shop to stay around, be nice to them.
Companies are seldom a problem, individuals might be.
Whether or not they hold a ticket does not seem to make any difference in the likehood of malicious interference.

Can we go to some technical subjects now?

I disagree. While it is true that memorization does play a big role,
being able to receive 20wpm code is an acquired skill; one which takes
practice and diligence for most people.

Does anybody have experiences on the accuracy of the schematics delivered?
For all the gear I checked (IC240 schematic delivered with rig, IC211
schematic delivered with rig, ICW2e schematic delivered AND service manual)
I found numerous obvious errors in the schematics. A rig built according
to those plans will not work at all. The errors are too numerous to be
accidents and I think they are made by purpose.

I don't know about other brands (kenwood, yaesu, standard, alinco), have
you checked the schematics and how well were they made?

>I don't buy radios (or most other electronic consumer goods) I can't get
>a service manual for. Often that influences my choice of brand. I
>suspect that there are enough people like me that the manufacturers have
>learned to make the manual available.

As usual, old professional dump gear has the best documentation.
If only it were more available.. usually, outdated gear is destroyed
and not available to the Ham Community, snif..

480. Frequency stability problem

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-11 02:02:57 UTC
From: karayan@rigel.uucp
Message-ID: <1992Jul11.020257.19031@porthos.cc.bellcore.com>
Source record: 287556

For some time now, I have been using a Kenwood TS-120S in my car.
This is an all-semiconductor rig. Tuning is analog, but a freq
counter gives me a digital readout.

During operating sessions, I noticed that if the engine was on, the
freq would slowly drift upwards. I assumed that due to vibrations,
the tuning knob was moving. With the engine off there was no drift.
Anybody knows how to solve this problem? Some way to tighten the
knob?

But that's not all. For the last couple of days, the rig has been
showing a weird instability problem. For no apparent reason
(engine off or on), the freq jumps a few hunderd Hertz up or down,
rather rapidly. That lasts a few seconds and then it settles down.
After about half an hour of operation, the problem seems to go away.

What's going on here? How can a smoothly-tuned rig jump like that?
Any ideas/pointers would be appreciated.

481. Marine SSB needed

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-11 02:11:30 UTC
From: steve@carlyle.CArlyle.COM
Message-ID: <26189.steve@192.9.1.30>
Source record: 287554

Does anyone know where (or how) I can find an ICOM M-700 marine SSB, used but in good condition? I'd consider a 600 or 800, too. I don't think I need the companion AT-120 antenna tuner, because I already have an AH-2 for my 735 that I also use on the boat (but am I right about this? can I run the 700 through the AH-2 as well, with a simple two-position antenna switch?).

Does rec.radio.swap deal with such things? And how does someone with only email capability communicate with rec.radio.swap? The FAQ doesn't make this clear; I've tried, but can't get a message through to them. The FAQ also says "there's a posting on buying and selling items through rec.radio.swap" and to please refer to it, but again, the FAQ doesn't say HOW, and my messages and queries don't seem to get through. Is there (for example), a listserv?

Any help anyone can give me will be appreciated!

You may have a problem running the marine SSB radio through the AH-2
tuner because the tuner gets the "band data" from the IC-735...If you try
the tuner on a different band than a ham band, the tuner may get confused.
Example: If the IC-735 is off or you had used it on 75m last, and you
are trying to use the marine radio at a much higher frequency, it
probably won't work, because the tuner is set for a different band.

My "Vintage Radio, 1887-1927" book by M. E. McMahon lists the
Brunswick Radio Corporation starting life as the
Brunswick-Blake-Collender Company and using just "Brunswick" starting in
1924 or 1925. They made lots of different models of receivers from 1924
to 1930, but the only ones to match your "17, 24, & 25" would be the
PR17-8, and the Radiola 17, both in 1928.

I hope that helps!

SB DX @ ALLBBS $RTDX0710
RTTY DX Notes 10 July
RTTY DX Notes for week ending 10 July, 1992 (BID RTDX0710)

Well here we are again, back in the chair looking for DX, and it seems
that since I have been away, we have had a very competent Lieutenent
looking after the shop. Thank you Luciano I5FLN, for your effort at
such a short notice. You did us proud.

Going mobile with the RTTY/Amtor gear is sure an experience. Low
power and short aerials make life a little more exciting when you do
have a contact, especially when the aerial is only three feet helical.
But it was fun. Must try it again some time.

Our thanks this week go to I5FLN, IK5AAX, TG9VT, VK2EG, WB2CJL
(checked that three times), W2JGR and the Twin Cities Packet DX
Cluster network and ZL2AAV. Thank you all for your help and
information, it's good to see the information again.

Notes of interest.

>From July 5th Croatia Republic will use the new prefix of 9A followed by a number 1, 2, 3 or 4. So far there has been a lot of acitivity on SSB and CW, but not on RTTY. It is also anticipated that new prefixes will soon appear for other Eastern bloc countries, such as, Slovenia, Bosnia, Czeck, Slovak and others. One will soon have to rearrange our DXCC listings sheet to keep up to date.

JT4/G3NOM, Ray, was QRV from South Mongolia (Gobi Desert) recently, from 9th July. He will go to Thailand where he expects to receive permission for digital modes operation for his trip to Kampuchea as XU1NOM. He hopes to start operation around 26th July. QSL all these operations to G0CMM.

>There's a Morse Code program there.

The Morse Code tutors available for the Mac are quite old (> 3 yrs). I used the one available from this site (Morse Code Tutor 1.2 c.1989) to study and pass my Extra 20 wpm three weeks ago. The program generates random code well, but tends to bomb out when sending text files.

I do not know of any recent Morse programs for the Mac that can compete with SuperMorse and Morse Tutor for the PC. If anyone knows of one, please post its location/availability.

TO: ALL EMERGENCY MANAGEMENT AGENCIES/OFFICES VIA THE ARS
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.229 DATE: July 6, 1992
SUBJECT: MGT: Radio Officer Liaison

A major factor in the decline of a radio response unit (whatever its name or however it is attached) is the Radio Officer who does not REGULARLY stop by the government office to which he or she is attached.

Such on-going visits are for a four-fold purpose:
1. To leave an activity summary. This could be a quick verbal or a concise write-up, depending on the person who is to receive it.
2. To provide RACES bulletins on topics of interest or as applicable.
3. To just ask, "How can I help out?"
4. To gather information that will be of interest to the radio response unit members; in other words, for broadcast on the net, in a newsletter, etc.

The busier the administrator, the greater the potential need for a Radio Officer capable of providing (by his/her own ability or those of others) clerical, administrative, management, computer graphics, data base or word processing talent, editorial ability; all skills other than just those of the emergency radio operator. Observing these needs comes from frequent visits with a "how can I help" attitude in mind at all times. Few busy people will turn away skilled and competent help, quietly offered and efficiently implemented with management skills.

Certainly, doing this can take time and effort, but the rewards to the Radio Officer, as well as the agency, are immeasurable. It is a real win-win situation when carefully studied and implemented.

FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.230 DATE: July 13, 1992
SUBJECT: OPS: So you want to help?

You want to help as an Amateur Radio operator in an emergency.
That's great. Sometimes that help is needed, sometimes not.
Here's a typical comparison:

It IS needed if you: *It is NOT needed if you:*
1. know/are trained in the ICS 1. don't know Incident Command System.
2. know and understand Prowords 2. didn't learn the Prowords
3. understand/use tactical calls 3. don't like or use tactical calls
4. are service-to-others oriented 4. are ego driven w/your own agenda
5. know tactical/FCC identification 5. overly & unnecessarily identify
6. are talented net control operator 6. have no net operating experience
7. are experienced traffic handler 7. don't like to handle traffic
8. can take directions amiably 8. resist direction / insist your way
9. can work with others under stress 9. have difficulty working w/others
10. willing to go where assigned 10. don't want to leave home
11. willing to respond as called 11. only serve at your convenience
12. willing to learn/change 12. not willing to learn/change

Obviously, there can be exceptions. An example is #9 above. A
hermit, skilled in other areas, might be an excellent remote
relay station operator if there are no others with whom he might
have difficulty with at his location. There are many other areas
of comparison, but the above is worth considering in relation to
your ideas of emergency communications. ---Cary Mangum, W6WWW

These three transceivers have been suggested as reasonably low-cost HF gear. Does anyone have comments about the relative merits of these radios? How useful is a built-in antenna tuner as opposed to an add-on unit.
Thanks.

493. Review - new Radio Shack PRO-43 portable scanner

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-11 22:10:45 UTC
From: parnass@cbnewse.cb.att.com
Message-ID: <1992Jul11.221045.26196@cbnewse.cb.att.com>
Source record: 287378

THE RADIO SHACK PRO-43 PORTABLE SCANNER

by Bob Parnass, AJ9S

The new Radio Shack PRO-43 is a small portable scanner made by General Research Electronics (GRE) which lists for about $350. Although it is a good step above other Radio Shack portable scanners, hobbyists awaiting a portable version of the famous PRO-2006 scanner will be disappointed.1 For instance, the PRO-43 is an "extended coverage" and not a continuous coverage scanner, covering these bands:

30 - 50 MHz
118 - 174
220 - 512
806 - 823.9375
896 - 899.9875

Note the omission of the 10 meter ham band, the 75 MHz band, and the lack of coverage above 1000 MHz.

While the PRO-2006 has 400 channels, the PRO-43 has only 200 channels divided into 10 banks. Individual lockout and 2 second rescan delay may be selected for each of the memory channels. Users may select between AM and narrow band FM on any frequency. The PRO-2006 has 10 pairs of search limits but the PRO-43 has only one pair and the step sizes are fac-tory set. The PRO-2006 had selectable step sizes.

Both models have 10 "monitor" memories which can be written manually during a search.

The HyperscanTM feature means the PRO-43 is supposed to scan at 25 channels per second and search at 50 steps per second. The radio does scan fast, although not measured by the reviewer. When enabled, the priority channel is checked every 2 seconds. As in the PRO-2006, any channel may be designated as the priority channel.

Physical

The PRO-43 is just the right size for a portable scanner. It is smaller than the PRO-37 and Uniden 200XLT but larger than the tiny Icom R1.2 The gray plastic case feels about the same as a 200XLT, neither as rugged as the Icom IC-2GAT walkie talkie, nor as thin and chintzy as the PRO-37.

Inside, there are 3 printed circuit boards and most of the components are of surface mount technology.

The top panel contains volume and squelch knobs, a 1/8" earphone jack, and a BNC antenna connector. A plastic belt clip of dubious strength is fastened to the rear with 2 screws.

A semirigid rubberized antenna is furnished with the PRO-43.

Performance Issues

The PRO-43 and Uniden 200XLT were tuned to the same frequencies both using their stock rubberized antennas.

On 857.4375 MHz, the PRO-43 heard Joliet Police signals full quieting which barely broke squelch on the 200XLT, due partly to the poor 800 MHz performance of the antenna supplied with the 200XLT. When the PRO-43 antenna was placed on the 200XLT, the 200XLT reception improved noticeably, but it was still not as good as the PRO-43.

On 146.94, 162.475, and 460.1 MHz, the PRO-43 and the 200XLT were close in sensitivity.

When connected to an outdoor AV-801 antenna, paging interference rendered several VHF high band channels unusable. The problem disappeared when using the rubberized antenna supplied instead.

Owing to the use of up conversion, a high first intermediate frequency, images don't appear to be a problem as they were on other Radio Shack portable scanners like the PRO-34 and PRO-37. The PRO-43 IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

Somewhat "Mushy" Audio

The PRO-43 uses an LM-386 audio output IC and the radio is loud enough, but distorts severely when the volume control is advanced too far. This is partly due to the internal speaker as there is less distortion when using an external Motorola lapel speaker plugged into the earphone jack.

The PRO-43 audio lacks high frequency response. By comparison, the Uniden 200XLT has cleaner audio and more of it, especially when using the internal speaker.

Batteries

The PRO-43 requires 6 AA batteries, but none are included. A battery clip slides up into the bottom of the radio case and a separate trap door slides over it. Alkaline cells or NiCd cells will bring the scanner to life. Like most other

Radio Shack portables, there are 2 jacks on the side, but they are smaller than usual. An optional, AC operated "wall wart" power supply/charger can power the radio or recharge NiCd batteries.

Keyboard and Display

The user manual explains that the KEYLOCK slide switch "disables the keypad to prevent accidental program changes." In truth, most of the keys are disabled. The MANUAL and SCAN keys remain enabled.

The liquid crystal display (LCD) is a smaller version of the display on the PRO-37. Being smaller, it is somewhat more difficult to read than the 200XLT display. Pushing the LIGHT button lights a single lamp behind the display. It stays lit for only as long as you keep the button pressed and is not latched or timed as in the 200XLT.

Summary

People who want a portable which covers both civilian and military aircraft frequencies should check out the PRO-43. The PRO-43 will be attractive to hobbyists who want more frequency coverage and fewer images in a smaller package than the PRO-37 or Uniden 200XLT and who don't want to fight the problems of using the more feature rich AOR 1000XLT.

Artificial earth satellite USA-34 (NORAD #19671, COSPAR 1988-106B) was carried on board Space Shuttle Atlantis mission STS-27 from Kennedy Space Center launched on 1988 Dec 2 and deployed that same day. This satellite is in an orbit inclined to the earth's equator by 57.0 degrees. It makes one revolution every 98.0 minutes and is in a nearly circular orbit approximately 661 km above the surface of the earth. It is roughly cylindrical with a 4.5 m diameter and length of 18.0 m. It is thought to be an imaging synthetic aperture radar surveillance satellite and is designated Lacrosse 1 in Ted Molczan's list of 700+ two-line elements.

Lacrosse 1's orbital inclination is the largest permitted by the trajectory constraints of the Space Shuttle at KSC. It may have been designed for an orbit with a higher inclination but due to its weight (too heavy for the Vandenberg boosters of the time and the abandonment of Shuttle launches from Vandenberg) a KSC launch on the shuttle was necessary. (The inclination restraint was waived to 62 degrees for the launch of USA 53 on Shuttle Atlantis on 1990 Feb 28.) Now that the Titan 4 launch vehicle is operational future large classified payloads will probably be launched exclusively from Vandenberg.

I observed Lacrosse 1 and Atlantis a few arc-minutes from one another as they passed over Denver on the evening of the launch. It looked like a wide double star as it moved from the NNW to the SSE. Since then I have observed it 14 times in the last two and one-half years mainly at magnitude +1 or +2--last on the evening of 1992 Jul 7-8. While its total brightness is usually steady, there is a pulsing reddish coloration which is reminicent of a navigation light on a high flying aircraft.

The MAC is *a* graphics oriented computer, but the Amiga, alone or with Video Toaster, is a much better NTSC device than the MAC. Many broadcast and production plants have adopted it while I've seen little evidence of MAC penetration in the video market. Actually, old DEC minis seem to dominate the video effects industry with Silicon Graphics workstations the coming thing.

I had a good chuckle at my local Radio Shack (Capitola CA.) ...
when I tried out the new HT they handed it over no questions asked,
WITH NO ANTENNA...I guess this doesn't hurt anything on the radio...
let me push a few buttons w/o breaking the local repeater...
my question is: were they being zealous about FCC regs or were they
enforcing shopping mall regs? ;@} ;@}
LOOKED like a nice rig, but I can't see buying a monobander...wish
they'd put out a dual bander; same kind of reaction I had to their
10 meter rig, it was a nice gadget but had no FM for when I upgraded
to general...wish they would stop cutting corners and sell more
complete equipment...if they did they would sell more units
and could expand their line of ham gear...as things stand now
I just buy batteries and a few componants (on Sundays when my
fav electronics store is closed)....ah well...

The ITU has mandated an automatic satellite based digital system for maritime distress use. Pilots aren't required to know Morse. The dot dash patterns of nav beacons are printed on the charts so they can decode them without having to memorize Morse. The US military no longer requires it's radio operators to know Morse. Morse is still used by some third world nations and some old line operators, but it's hand/ear use is disappearing from HF except on the ham bands. Hell, RTTY is disappearing from HF except on the ham bands, and shortwave broadcasting may be gone in another ten years, replaced by satellites. Faced with modern military comm gear, most hams couldn't qualify as "trained operators". There's no place to plug in the key.

>What is the reason for learning "all the dots first" mode?

That's not really the case. The traditional method is to learn the most frequently used letters first. Unsurprisingly, Morse is designed so the most frequently used letters are the shortest. The reason for learning ETAIONS first is that real words can be exchanged early in the learning curve. This helps hold interest in the learning process.

Source record: 287393

ZEN and the Art of CW
CW and the Bicameral Mind

Much of the recent discussion about J-38 keys (and any of the other thinly disguised forms of the ever-recurrent CW debate) seems to ignore the central reality of just what CW is and its true though unstated role in Amateur Radio. It is my contention that the key (pun intended) to understanding the importance of the J-38 to some hams is to see it as a traditional religious implement and morse code as the central sacrament of a religion.

All the traditional elements are there: sending and receiving Morse Code requires a concentrated yet relaxed mind set unimpeded by left-brained intellectual distractions. In more advanced practitioners it becomes an automatic activity that can transpire simultaneously with other activities (for example reading the newspaper).

CW shares much in common with many other bicameral activities (religious rites, hypnosis, poetry, schizophrenia) as defined by Julian Jaynes in his pivotal work THE ORIGIN OF CONSCIOUSNESS IN THE BREAKDOWN OF THE BICAMERAL MIND, including the collective cognitive imperative (the strengthening of the religious experience by crowd phenomena such as crowded bands, "pile-ups", CW fraternal orders such as ham clubs and informal fraternization such as loose association on the Internet and the "old fart" elmering phenomenon, for example.)

A second element of the bicameral paradigm present in CW is induction, the narrowing of consciousness and focus on a concentrative technique. This is similar to the induction procedures used in ancient times by oracles, traditional meditation techniques, and hypnosis.

Also present are trance and paralogic compliance, diminished time sensation, external authorization syndrome, ritualization (standard QSO content etc.), altruism, and many other componants of the bicameral syndrome. For more information see the Julian Jaynes book previously mentioned and Eric Hoffer's THE TRUE BELIEVER.

Please note that in making my observations I am not making "good vs. bad" value judgements but rather studying the phenomena of CW within a psychological/phenomenological/religious/anthropological context that may explain the devotion that some hams feel towards it as well as some of the antagonism felt by others. It is my observation that CW's appeal is best understood in the context of religious phenomena and questions as to its technical appropriateness are beside the point.

Personal note: Besides being a recent graduate of C.I.E.'s
communication's electronics course (Alpha Beta Kappa), I have spent
the last twenty years studying with shamans and religious teachers
from West Africa, the Arab world and Tibet, am currently finishing my
undergrad work in psych and philosophy, enrolled in a program training
as a hypnotherapist, continuing my studies at C.I.E. with a course in
microprocessor tech and computer programming and working on my code to
upgrade my ham license. I am a proud owner of a J-38 ;@}. You may be
interested in knowing that there are several Tibetan Lamas that are
hams and/or proficient CW operators including the Dalai Lama and one
monk that runs the communications service in Bhutan. thx and 73.

I'd just like to give a global thank you to everyone who replied to my
inquiry about FTP sites containing Morse Code programs for the Macintosh.
And, in keeping with my promise, a soon-to-follow message will contain
a listing of the sites I have been directed to containing ham software
for the Macintosh.

Again, a global thank you to everyone.

73,
Scott

506. Icom Battery Packs

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-12 05:13:58 UTC
From: john@prusik.com
Message-ID: <1992Jul12.051358.12571@prusik.com>
Source record: 287385

I recently bought an Icom IC-W2A handheld that uses the smaller of the two main Icom battery pack sizes. I own a bunch of other Icom handhelds that use the larger format batteries. Today at the ham flea-market I found a gadget that lets me charge the small format batteries in the large format drop in charger (BC-35). This magic adaptor is made by Delcom (415-592-8790, San Carlos, CA) and sells for $10.

Does any one make an adaptor that lets you put a large format battery on a small format handheld?

The BC-35 uses microswitches and small holes in the bottom of the battery pack to determine the charge current and voltage. Delcom's adaptor looks like a BP-4 (7.2V Battery 45mA charging current) I'm putting a BP-84 in the adaptor and would rather the BC-35 thought it was a BP-2 so it would use the "rapid" charging current.

What is the hole pattern on a BP-2? And more generally, what hole patterns do all of the battery packs use?

Help me fill in the following table...

```
Battery
| Pack Voltage
| | Charging Current
| | | Hole pattern O=hole, X=no hole
| | | |
BP-2 7.2V 600mA - ? ? ? +
BP-3 8.4V 25mA - O O X +
BP-4 7.2V 45mA - O X O +
BP-5 10.8V 600mA - ? ? ? +
BP-7 13.2V 600mA - ? ? ? +
BP-8 8.4V 600mA - X O O +
BP-70 13.2V ??mA - ? ? ? +
|
(Are there others?)
```

507. WARNING: Potential Major Solar Flare Warning

POTENTIAL MAJOR SOLAR FLARE WARNING

UPDATED: 05:30 UT, 12 JULY

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGIONS 7220-7222 (S12W01@12/00Z)

```
-------------------------------------------------------------------------
| ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS |
|-----------------------------------------------------------------------|
| DAYS | C5.0 | M1.0 | M5.0 | X1.0 | X5.0 | >X12.0 |
|------|----------|----------|----------|----------|----------|------------|
|1( )PG| 95 % | 70 % | 50 % | 30 % | 10 % | 1 % |
|3( )PG| 100 % | 80 % | 60 % | 35 % | 15 % | 1 % |
|5(-)PG| 100 % | 80 % | 60 % | 35 % | 15 % | 1 % |
|7(-)P | 100 % | 80 % | 60 % | 35 % | 15 % | 1 % |
-------------------------------------------------------------------------
```

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Regions 7220 (S12W01) and 7222 (S11E12) continue to show a notable level of complexity. Region 7220 is beginning to decay while Region 7222 is in the process of growing. Together, these spot groups constitute a sizeable area of potential instability.

Regions 7220 and 7222 both appear to have small magnetic delta configurations. Both also have fairly strong gradients and levels of shear. Not much in the way of energetic activity has been observed from Region 7220

since the last major M6.7/2B flare of 09 July. Region 7220 contains a contorted neutral line on the east side of the large leader spot where gradients are also fairly high. Also, emissions at 10.7 cm wavelengths from both of these regions have increased over the last 24 hours. These elements, together with the close proximity of growing Region 7222, suggests a large major flare is possible within one or both of these regions over the next several days. Considering the close proximity of these two regions, activity in either region could trigger a larger major event.

A major flare in Region 7220 would likely spread into Region 7222, which could substantially enhance the overall size of the event. Flare related injections of protons is a possibility should a major event materialize.

This warning will remain active until further notice.

/\

=========
SpaceNews
=========

MONDAY JULY 13, 1992

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* SAREX NEWS *
==============
Despite technical difficulties experienced with the window mounted antenna
used by the STS-50 crew ham-radio communications with groundstations,
the latest SAREX package carried on US Space Shuttle "Columbia" on the
longest shuttle mission to date was an overall success.

A two-way FM voice QSO was planned between Dick, KB5SIW, on the US Space
Shuttle "Columbia", and Alexander, U8MIR, on the Russian space station
Mir on 06-Jul-92 between 17:02 and 17:05 UTC.

Charlie, WD5BJH/KH6 in Hawaii had a QSO with the STS-50 crew using
nothing more than a Yaesu FT-411 portable transceiver, rubber duck
antenna, and 1 watt of transmitter power! (It must be nice to live
in Hawaii!).

Numerous stations reported receiving high quality slow-scan television
images from the shuttle. Packet radio operations involved using the
SAREX "Robot" autotransponder.

The following is the July 4th Independence Day holiday greeting from STS-50
copied by WA1GUD in Tampa, Florida at 15:50 UTC on 04-Jul-92:

W5RRR-1>QST <UI>:
Happy Birthday America. If we can't be home, this is the next best place to be,
in Space. Have a grilled hot dog for us! KB5SIW & KB5SIX

The "Robot" issued QSO numbers to stations successfully connecting to SAREX:

*** CONNECTED to W5RRR-1
#36-is your STS-50 SAREX QSO number.

QSL cards for STS-50 two-way contacts or one-way reception reports are
available through the ARRL's Educational Activities Department. Send
```

your report along with an SASE to:

The American Radio Relay League
225 Main Street
Newington, CT 06111
U.S.A.

You should send it ATTN EAD and identify the envelope indicating the QSL card request is for STS-50. Rosalie White will forward the reports to the group who will handle QSLs for this mission.

This long duration shuttle mission will help pave the way to long duration space station and interplanetary missions involving humans.

* MIR NEWS *
============
Mir cosmonaut Alexander Kaleri, U8MIR, reports that the Soyuz TM-15 module docked and recently left the Mir complex. Medical and geophysical experiments were performed, often running all night. The orbit of Mir was such that it was in continuous sunlight raising the internal temperature of Mir.

On 25-Jun-92, Alex reported the following to Dave, N6JLH:

Attitude control is working now.
Two days running we have prepared
our space suits for the future EVA.
We was busy from morning to the
evening. EVA will be on July 8 or
10. Next few days we'll make some
medical tests to get permission
for EVA. On Friday's night the
freighter will leave us. On July 2
will be rendezvous and docking with
the next frighter. And then we'll
have much work.

Mezospheric clouds are visible
during the whole working day. From
America through Siberia to Europa.
Fantastic!

Good bye! 73 Alex U8MIR

Alex has been downloading space related files N6JLH obtained from the N3ITQ PBBS. Information regarding these files was carried in SpaceNews last month. Alex captured all 18 kilobytes of data from N6JLH's packet radio TNC in just one pass. Alex enjoyed reading about the space programs of other countries.

[Info via Dave, N6JLH]

* COLLOQUIUM PAPERS DUE *
=========================

The seventh annual AMSAT-UK Colloquium is scheduled for 29-Jul-92 through
02-Aug-92 at the University of Surrey in Guildford, Surrey, England.
All delegates wishing to present papers at the Colloquium are asked to
submit a five line synopsis of their paper to Ron Broadbent, G3AAJ,
via FAX, Compuserve, or telephone:

FAX : 081 989 3430 (+4481)
Telephone : 081 989 6741 (+4481)
Compuserve : 100024,614

This is an URGENT request. Don't delay. Submit your synopsis NOW!

[Info via Ron, G3AAJ]

510. Morse code requirement

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-12 14:12:00 UTC
From: faunt@cisco.com
Message-ID: <9207121411.AA18329@dirt.cisco.com>
Source record: 287390

Date: 12 Jul 92 00:24:13 GMT
From: usc!sol.ctr.columbia.edu!emory!wa4mei!ke4zv!gary@network.UCSD.EDU
<text deleted>
Pilots aren't required to know Morse. The dot dash patterns
of nav beacons are printed on the charts so they can decode them without
having to memorize Morse.
<text deleted>
Gary KE4ZV

This is all true, but another ham and I were asked by a private pilot
how to learn morse so he just read the beacons and not have to match
the dat dash patterns. It just goes to show, some people will learn
what they have to to do the task right, and others will scrape by.
My partner, after much urging (and a major firestorm) consented to get
her license. The codeless Tech would have been quite sufficient, but
she insisted on learning the code, because she wouldn't feel competent
unless she had done so. She now feels that doing this has been
empowering, since she now understands much more about how some things
work.
73, doug

511. NASDA Press Release 08-Jul-92

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-12 17:32:57 UTC

Message-ID: <9207121214.AA13689@ka2qhd.de.com>
Source record: 287391

SB NEWS @ AMSAT < KD2BD $NASDA0708
NASDA Press Release 08Jul92

>From NASDA PRESS RELEASE:
July 8, 1992
NASDA HQ, TOKYO

DEVELOPMENT SCHEDULE OF H-II LAUNCH VEHICLE

The National Space Agency of Japan (NASDA) has been developed the H-II launch vehicle as the new Japan's main Space transportation system. NASDA has investigated the cause of trouble on the H-II 1st stage LE-7 engine which occurred on June 18, 1992 at the NASDA's Tanegashima Space Center.

As the result of discussion, NASDA decided to change the H-II flight schedule. The 1st flight was shifted from early 1993 to early 1994. The 2nd flight was changed from summer of 1993 to summer of 1994 and for the third flight in early 1995 from early 1994.

Development Plan of LE-7 Engine and H-II Launch Vehicle

1. Overview

NASDA has conducted the LE-7 engine firing tests over 200 times so far and excellent results for the performance were obtained and good data for durability was taken by achieving consecutively two full duration firing tests with the same engine.

But, design change is required to take countermeasures of the trouble happened on June 18, 1992. As the result, it is needed to reschedule the LE-7 engine development plan.

2. Current of trouble and its countermeasure

The engine performance including the specific impulse and engine start/ stop sequence were established. Full duration firing tests are required to confirm the engine durability.

3. Cause of trouble and its countermeasure

(1) Trouble

Fire was seen out side of the engine at 5 seconds after ignition on June 18. It is assumed that starting point of destruction is at the welding part connected the main injector's elbow and liquid hydrogen turbopump.

(2) Cause of trouble

It is assumed that heat vibration over design value repeatedly damaged the welding part and, cracks and breakages were occurred.

(3) Countermeasure

The following is under discussion as the main countermeasure.

i) Set of heat shield to protect the direct heat load into the welding part.

ii) Flatting of the welding part to protect the heat load into the limited part.

iii) Change of heat treatment to improve the strength of the welding part.

Similar welding part on the engine will also be checked.

3. H-II Launch Vehicle Development Plan

The new H-II launch schedule is currently under discussion. Tentative launch schedule is attached and further discussion will be done in detail.

H-II Launch Vehicle Launch Schedule

<Current Schedule>

1993 Jan.-Feb. VEP/OREX

1993 Aug.-Sept. ETS-VI

1994 Jan.-Feb. SFU/GMS-5

<New Schedule>

1994 Jan.-Feb. VEP/OREX

1994 Aug.-Sept. ETS-VI

1995 Jan.-Feb. SFU/GMS-5

VEP: Vehicle Evaluation Payload
OREX: Orbital Reentry Experiment
ETS-VI: Enginnering Test Satellite-VI
SFU: Space Flyer Unit
GMS-5: Geostationary Meteorological Satellite-5

513. Re: RadioShack 4000ma D-Cells on sale / Building a pack

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-12 21:34:36 UTC
From: goris@hpfcso.FC.HP.COM
Message-ID: <103360094@hpfcso.FC.HP.COM>
Source record: 287409

$4.95 for 4AH D-cells is a GREAT PRICE! About 6 months ago I bought
14 of these at $7.95 to build a portable pack. I'm going to hit all
the local radio shacks and stock up! Of course, in a year or two
we'll all be using Nickel-Metal Hydride.

Although I missed out on the battery sale, I did cash-in on the
charger sale. They had the chargers for the 4AH batteries on sale
about 6 months ago. It only charges 4 batteries at a time. I haven't
even seen any of the chargers for the 4AH batteries at the local
RS lately.

********** BEWARE! ************

One other note: I've you're driving much current, beware that MOST of
Radio-Shack's D-cell battery holders ARE NOT RATED FOR THE CURRENT THAT
the Hi-capacity D-cells can deliver! I melted a battery holder finding
this out. I'm not familiar with packs that have a belt-loop, so I'll go
check them out tomorrow.
Also, some equipment (like certain brands of photo gear) takes advantage of
the internal resistance of Normal/Alkaline batteries, and can be damaged
by the low internal resistance of NiCads. This is rare, but check the
manual if in doubt.

-Andy Goris AA0CM

PRELIMINARY KEPS FOR KITSAT-A

HR AMSAT NEWS SERVICE BULLETIN 193.01 FROM AMSAT HQ
SILVER SPRING, MD JULY 11, 1992 BID: $ANS-193.01
TO ALL RADIO AMATEURS BT

G0/K8KA Provides Preliminary Keplerian Elements For KITSAT-A

Jeff Ward (G0/K8KA) has provided an initial keplerian element set for the next University of Surrey (UoS) OSCAR satellite known as KITSAT-A. The launch is presently scheduled for August 11, 1992 aboard an ARIANE-4 from the Kourou, French Guiana spaceport. A complete description of KITSAT-A can be found in AMSAT News Service (ANS) bulletins $ANS-116.01 thru $ANS-116.03. However, KITSAT-A is based on the UO-22 design with a 9600 baud PACSAT Communications Experiment (PCE) and a CCD camera for earth image processing. A new experiment flying aboard KITSAT-A that was not present on UO-22 will be the Digital Signal Processing Experiment (DSPE). The DSPE will support a variety of speech synthesis experiments including store-and-forward speech relay, voice telemetry and message broadcasts, and high-speed modulation techniques. Before KITSAT-A is launched, a detailed description and summary of frequencies will be published in the ANS. Those who are currently using UO-22 will be set to use KITSAT-A as soon as it is released for general use after a complete engineering check-out.

The following is a preliminary element set for KITSAT-A. These elements are provided so OSCAR users can get a "feel" for this particular orbit. No other OSCAR has ever been placed into this type of orbit. All are encouraged to insert these elements into your satellite tracking programs and observe the uniqueness of this orbit.

Satellite: KITSAT-A

SUMMER AO-13 TRANSPONDER SCHED

HR AMSAT NEWS SERVICE BULLETIN 193.05 FROM AMSAT HQ
SILVER SPRING, MD JULY 11, 1992 BID: $ANS-193.05
TO ALL RADIO AMATEURS BT

AO-13 Late Summer Schedule Announced
The current schedule for AO-13 is as follows:

N QST 1992 May 08 AO-13 Transponder Schedule Jun 10 - Jul 20
Mode-B : MA 000 to MA 165 ! Mode-JL on Mon, Wed !
Mode-JL : MA 165 to MA 200 ! Fri and Sat UTC only. ! Alon/Alat
Mode-LS : MA 200 to MA 215 ! S Beacon on "L" days ! 210/1
Mode-B : MA 215 to MA 256 ! S Transp on "B" days +----------/
Omnis : MA 250 to MA 060 ! Mode L OFF after Jun 29 until
Aug 17. Next attitude change Jul 20, to 150/0 until Sep 21.
73 de Peter DB2OS, James G3RUH and Graham VK5AGR.

--->PLEASE NOTE THAT AO-13 IS IN MODE B UNTIL AUGUST 17TH!!<---

AO-13 Transponder Schedule 1992 Aug 17 - Sep 21

Mode-B : MA 0 to MA 40 ! from 1992 Aug 17 until Sep 21
Mode-S : MA 40 to MA 50 !<- S transponder; B trsp. is OFF!
Mode-LS : MA 50 to MA 55 !<- S beacon + L transponder
Mode-JL : MA 55 to MA 70 ! This schedule operates
Mode-B : MA 70 to MA 256 ! every orbit, every day.
Omnis : MA 160 to MA 10 ! Alon/Alat 150/0
Please DON'T uplink to mode-B MA 40-50; interferes with mode S.

Calendar Of Events For AO-13 To The End Of 1992
-=-
Suns Position

```
Date Event Modes Sun Angle SEL/SAZ
-----------------------------------------------------------------
1992 Jul 20 [Mon] Move to 150/0 B -- - 43 to 44 -34/176
1992 Aug 17 [Mon] JLS ON B JL S 28 -26/208
1992 Sep 21 [Mon] Move to 180/0 B JL S -1 to 29 -2/241
1992 Nov 23 [Mon] Move to 210/0 B JL S -29 to -4 33/305
1992 Dec 14 [Mon] JLS OFF B -- - -27 33/333
1992 Dec 28 [Mon] t.b.a. 43 29/351

518. Need help with WAS on satellite

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-12 23:52:43 UTC
From: price@cod.nosc.mil
Message-ID: <9207122352.AA29771@cod.nosc.mil>
Source record: 287400

I have been using the Radio Sputnik (RS) ham satellites off and on for several years. I presently have 40 states worked and confirmed. And I have a line on getting KH6, a real stumbling block on these birds, thanks to fellow netter KJ9U/KH6.

Sooooo, I'd like to see if some of you other folks can help.
I need:
AR, CT, DE, HI, MS, NC, RI, SD, VT and WV

What I propose to do is to catch all the RS-10 and RS-12 passes that are at reasonable hours (local time) next weekend, and if any of you all can stop by and give me a QSO, it would be appreciated, *especially* if you're in one of the states above.

RS-10, passes from south to north, about 20 mins. horizon to horizon, uplink: 145.86-145.90, downlink 29.36-29.40, beacon on 29.357. Shown below are best passes with my acquisition times:
Sat. 18 July, 1920Z, E. Coast favored
Sat. 18 July, 2105Z, W. Coast favored

Sun. 19 July, 1949Z, E. Coast
Sun. 19 July, 2136Z, W. Coast

RS-12, passes from south to north, same deal as RS-10
uplink: 21.21-21.25, downlink 29.41-29.45, beacon on 29.407
Best passes, acquisition times:
Sat. 18 July, 2130Z, E. Coast
Sat. 18 July, 2311Z, W. Coast
Sun. 19 July, 0058Z, far west/KH6

Sun. 19 July, 2156Z, E. Coast
Sun. 19 July, 2339Z, W. Coast
Mon. 20 July, 0129Z, far west/KH6

I will be calling 'CQ RS' in the lower part of the passband on as many of these passes as I can make, depending upon what's going on in my real life next weekend. Any help will be appreciated.

73--Jim, K6ZH

P.S. If you haven't tried these birds before, at least give a listen. It takes very minimal equipment, i.e. nothing special. For RS-10 I use a 25 watt all mode 2 meter radio into 4 elements at 25 feet! I use my TS-430S for both up and down on RS-12. You can hear fine with a vertical or dipole, a beam is desirable, but not necessary, for the uplink.

521. navigational beacons

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-13 03:41:24 UTC
From: oo7@ut-emx.uucp
Message-ID: <75708@ut-emx.uucp>
Source record: 287403

gary@ke4zv.uucp (Gary Coffman) says, inter alia:

>>Pilots aren't required to know Morse. The dot dash patterns of nav
>>beacons are printed on the charts so they can decode them without
>>having to memorize Morse.

Purely as a matter of interest, why do the beacons identify in Morse?
Why don't they use voice if they have to be translated via a chart?

I think slow Morse is used to make them easier to hear. One is often
dealing with a very weak signal and a lot of atmospheric noise (crashes
of lightning, etc.).

525. Demote Extra class Lids to no-HF status for rudeness

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-13 06:26:41 UTC
From: cberthel@cc.utah.edu
Message-ID: <1992Jul13.002641.1@cc.utah.edu>
Source record: 287410

I've had my no-code tech ticket for about 2 months now--just long enough to experience both the rudeness and the generosity of the ham community. I'm learning the code because I *HAVE TO* for HF privileges, but I doubt I'll ever use it after the exams. Probably the most intimidating thing about the idea of going on the air with Morse instead of VOICE is the rude "old farts" out there that won't give a new ham the time of day. Just last week one yelled at my blind YL friend (who is an Extra) that he didn't want to talk anyone running less than 500 watts. Well, her Kenwood 440 will only put out 100 watts so what's the deal here.

I've read months of arguing over the code versus no-code issue. Seems to me that this is territorial issue rather than a technical one. The "old farts" were on the playground first and don't want newcomers to come in and use the swings because then they'll have to share. I've even had some interesting 2m experiences. After listening carefully and confirming that a simplex frequency was not in use, transmitted to a fellow ham. I was immediately rebuffed that "a bunch of us monitor this frequency, could you move to another frequency?" Since when did a bunch of hams own a frequency? Why could I not use a frequency if they were clearly not transmitting on it?

The rude and intimidating may be a small percent of the ham community but it certainly spoils it for the rest of us. Too bad the FCC or ARRL didn't outlaw rudeness when they did profanity and idecency! Too bad a Extra class *LID* can't be demoted to no-HF tech status for being abusive on the ham bands.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 069 (OPDX.069)
July 13, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, DXNL, DF4RD, DL6RAI, IK5AAX, IS0JMA, WB3LHD, KG4DD, KF8VW, WA8MEM and KJ9U for the following DX information.

1B1NCC, CYPRUS PIRATE. Reported by SV2WT, the station active as 1B1NCC is a pirate in Northern Cyprus. The operator who is in the Turkish army is trying to establish this enclave as a new country and is using amateur radio as a propaganda tool.

1S, SPRATLY ISLANDS. The BBC-WS has reported that China may have landed troops on the disputed island of Spratly. China has announced that they intend to pursue their claim to the islands, but did not acknowlege that they have sent troops there. The Spratlys have been claimed by China, Malaysia, Philippines, Taiwan and Vietnam. China and Vietnam have even had a naval battle over islands in 1988. The Malaysian government has gone as far as building a resort on one of the islands. No comments by the other countries have been heard. Stay tuned for more details.

5H, TANZANIA. Be looking for members of the Royal Omani Amateur Radio Society (A41JV, A41KG and A41KY) to be active from Zanzibar Island (AF-032) as 5H0ROA from July 15 thru 31. Also, they will be active from Pemba Island (AF-040) as 5H0ROA/A from July 21 thru 27. Operations will be conducted on 10-80 meters, including the WARC bands, on SSB/CW and digital modes. QSL via A47RS.

9A, CROATIA. The International Telecommunications Union (ITU) has issued the prefix block 9AA-9AZ to this former part of Yugoslavia. On a added note, 9A1 had been used by San Marino before 1984. They currently now use T7.

D2, ANGOLA. Rudi, DK7PE, will be active from Luanda, Angola between July 22 and 30. He will operate CW on the usual DX frequencies using wire antennas.

FR, GLORIOSO ISLANDS. Henri, FR5ZQ, is now on the island and signing /G. He has been active on the 14256 DX Net Fridays at 0100z. Indications by net controllers are that Henri will be there the next couple of Fridays.

GJ, JERSEY. Marc, ON5FP, will be operating as GJ0RLU, from July 13 thru 31. He will also try to be active from Minquiers (EU-099) on July 18/19 or 25/26.

HD8, GALAPAGOS ISLANDS. Charles Campbell, HP1XPN, will be operating as HD8VO from August 5th to the 20th. Activity will be on all bands, SSB and RTTY. QSL info is: Charles Campbell, PSC 2 Box 675, APO AA 34002 U.S.A

IM0, ISLANDS FROM SARDINIA. Roberto, IS0JMA, informed OPDX that he and Francesco, IK0FUX, and Franco, IK0NGI, with the support of A.R.I. Section Olbia, will be active during the month of July from some of the islands of Sardinia. All operators will sign IM0/ and activity will be on all HF bands including the WARC and VHF/UHF, SSB/CW. They will start on July 12th from Cavalli Island (EU-024). On July 18th, they will be on Molara Island (EU-024) and July 19th on Tavolara Island (EU-024). QSL all contacts to IS0JMA: Roberto Alaimo, P.O. Box 41, 07026 Olbia (SS) Sardinia Island, Italy.

KG4DD. Doug, KG4DD, from Guantanamo Bay, has informed OPDX that he is now stateside and has been since March 31st. He is concerned that there have been spots of KG4DD in some bulletins recently. Consider them a work of a pirate. Doug will return to Guantanamo sometime in the middle of September. His stateside call is WD8QCU and he plans to do some mini stops around the Carribean this Winter/Fall as WD8QCU/? (He does not have all the details yet, because he is in the Navy and all the traveling will be by ship.). QSLs go to Doug's QSL Manager N5FTR for all of his operations.

KH4, MIDWAY ISLANDS. Ted NH6YK/KH4, is on the air now until August 20th using a Drake TR-7 and a big log periodic antenna. He hopes to repair the antenna so it is pointing at the horizon instead of the ground. Look for him on 10 meters.

OY, FAROE ISLANDS. Be looking for Michel/F6AMI and Didier/FD1NZO signing OY/ from July 14-17. Suggested frequencies are: 3790, 7060, 14260, 21260 and 28460 kHz. QSL via FD1NZO. They will be active from Iceland after their OY operation.

RTTY ACTIVITY REPORT.
15 meters: 5H3AS, CU3EM, DU1RP, EA8SI, EH92D, HL5G, PY6LAF, VQ9IO(*), YB1YMN, YL3HO
20 meters: ES7FQ, FR4FR(ARQ), RF6FC, RJ8JAB, TA2AD(ARQ), U5XG, UA9FA, UG6GG, VP5JN, VQ9IO(*), YL2HB
* QSL to Diego Garcia A.R.C., NSF Box 16, FPO AP 96464-0010, USA

S5, SLOVENIA (RUMORED)? This may be the possible new prefix for Slovenia.

UKRAINIAN QSL- BUREAU: P.O. Box 56, Kiev 252001, Ukraine. (From UB4WZA)

VP9, BERMUDA. Bob, WB2YQH, is now active from here until July 18th as VP9CB. Operation will be from Sandy's Parish on 10-40 meters including the WARC bands and favoring the CW mode. QSL only this VP9CB operation to WB2YQH.

ZA1A QSLS. The ZA1A operation that was conducted in the IARU Contest go to OH2BBF: Erkki Heikkinen, PO Box 53, 10901 Hanko, Finland. Six meter contacts go to OH2BC.

ZD8, ASCENSION ISLAND. Jim, N6TJ, will be returning here and will be active from July 22 to August 5 as ZD8Z. Meanwhile, ZD8LII continues to be active on 10, 15, 20 and 40 meters CW. QSL via S. Hodgson, c/o Ascension Radio Club, Box 2, Ascension Island.

ZK1, SOUTH COOK ISLANDS. ZK1AR has been active from here and is showing up on the 14236 DX Net around 0230z. QSL via WB6HGH.

If you said that in French, it would sound like:

Kay-Day-Unhhh-Ash-Zed

NOT the same as

Kay-Dee-Wun-AAAch-Zee

Other foreign languages are even stranger sounding (to an American).
Note, I am NOT espousing the belief that all should ID in English, I'm only providing some of the reasons WHY it is that way.

Yes, it's true. My fiancee, Chris (N3MXZ) took her no-code tech test on June 6, and her license was dated July 7. It was received on July 10, one day short of five weeks after being taken. I sent in the test package the same day of the test, but it's STILL pretty amazing.

Absolutely! It's been my contention all along that people will learn
the things they need to know to do the tasks they want to accomplish.
Thus formal testing of operating skills is mostly irrelevant.

> Purely as a matter of interest, why do the beacons identify in Morse?
> Why don't they use voice if they have to be translated via a chart?

Couple of reasons. First, morse ID'ers are simple. Remeber that most of these things have been sitting out in the field for ages. Second, morse ID'ers are easily to positively identify. It's very slow morse and I can make it out even when I can't make out what the audio track is saying. Most Nav radios have an "ID" position which is what hams would call a CW filter. Third, they use the audio transmission for other things (usually as a remote for a ground radio station, sometimes for weather recordings).

The real question is rather not why use voice, but why not use some digital encoding of the station. Backwards compatibility mostly, by the time you did that, the technology would progress into something like GPS...

>Why don't they use voice if they have to be translated via a chart?

There are several reasons. One is historical. Another is that we're dealing with AM and slow MCW is easier to pick out of the noise than recorded voice, especially when English is not the native language of the pilot or the person recording the ID. There are several nav systems in use, one MW system uses the Morse letters N and A to indicate that you are to the left or right of the beam. When you are on the beam, the two letters merge to a continous tone. That would be hard to do with synthetic voice.

That happened during my primary training. The instructor dialed up the Scholes VOR, and I identified it immediately, without looking at the chart. "How do you know that?" "It said VUH." "Really?" "Yep. Remember, I'm a ham radio operator." "Oh?" (twist twist twist) "What's that say?" "MHF." "Oh. I guess you don't need to look at the chart after all."

Mainly historical reasons - a lot of the time, the ID is generated by a code wheel - but also because it's easier to pick out a CW ID than it is a voice one, an issue when navigating by a navaid right at the edge of its standard service volume. About 10 years ago (I'm told), a number of VORs and other navaids were converted to voice ID, but they're not doing that any more.

|>73, Geert Jan PE1HZG

Interesting. I have two Kenwood and one Icom service manual, and have used them to work on each one (though not in great depth). Noticed one very minor discrepancy in the Kenwood one; that looked like a design change that didn't get caught everywhere. (Something was removed from the schematic, but the PC layout still showed it. Specifically, power (+5) to pin 1 of the computer control jack, which is officially "unused". I put the removed choke back in and used the +5 to power a MAX232 level converter chip externally, thus avoiding an external power supply for it.)

I certainly haven't noticed the sort of thing you mentioned (and if I ever do, I'll stop buying from that manufacturer!)

> self-trained operators, and yes, CW was once a commercially useful
skill.
> Times have changed. The licensing has not.

Yes, but the CW vs. no-CW debate is also an old one. It comes down to
this:
some folks are upset that they can't use some sub-bands without learning
higher speed morse. Their argument seems to be: "I don't use CW, so I
shouldn't have to learn it". Well, I don't use digital modes, so why
should
I have to know about them for the license exam. I can't remember the
last time I used Ohm's Law, so that's out, too. I've never been on ATV,
satellite, microwave, or moonbounce, either, so don't question me on
those. I think that leaves the SSB sub-band boundaries (20 and
10 meters only; those are all I use,), and maybe the regulation about
giving your callsign every 10 minutes. I certainly don't need to know
any of that electronics stuff; I never even open the top of my radio any
more; it's all ICs and CPUs and surface mount, wave soldered, multi-
layer argle-bargle, and who ever fools with any of that? I guess
we're down to about a three-question test.

My point is that breadth of knowledge is part of what makes a ham a
ham, and I will be sad to see CW go. I think it will, eventually, and
I think ham radio will be weaker for it's loss.

541. HTX-202 Error codes?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-13 15:55:30 UTC
From: djenkins@wang.com
Message-ID: <brc48j.mih@wang.com>
Source record: 287423

Recently I got "ER 2" displayed on my HTX-202 and it locked up. A quick power cycle and all was well again. It has ONLY happened with the rubber duck and on high power with external power supply (resulting in 6W into the duck). I suspect that this is an antenna mismatch shutdown (loose duck).

It has never happened with my twin-lead J-pole or the 5/8 mag mount. It has happened about half a dozen times with the standard issue rubber duck.

Does anybody know what this means and what other error codes are possible?

P.S. I still love my HTX-202

Hams are like all human beings; they behave according to their nature. You just happened to run into a couple of duds. There are lots and lots of us who have been on the air for a long time (30 years in my case) who are very nice people who will chat with newcommers and give them all the help they need. Many of us go out of our way to help newcommers; we're VEs, and spend lots of time and money as Elmers to new hams. Go for the advanced license classes, and ignore the lids. Who knows; you might even get to like CW.

>of ingenious tricks that you folks have stumbled across,
>I'd certainly be interested to here about some of them....

Okay, here's something I did recently.

I got fed up with trying to keep track of my HT and accessories every time I wanted to go somewhere. I regularly use extra battery pack, external mike, earphone, and a telescoping whip antenna (from ANLI - I heartily recommend it; it was written up in "73" - I think the Feb '92 issue).

I customized a plastic foamlined pistol case (got it for $4 at a gun show - they're also available for about $8 at the local sporting goods shop) to hold my Alinco and accessories. I used a razor-knife to cut appropriately-sized-and-shaped slots and spaces in the foam on the bottom half of the case. I cut a little space out of the foam in the top half of the case so the keypad wouldn't get pressed when the case was closed (this is the "egg carton" style of foam, BTW), and that's all there was to it. Everything is held very securely. I put my earphone in a 35mm film canister so the wire wouldn't be all over the case.

This thing is really feather-light, and perfectly sized. I don't have it with me, but I'd gustimate the size to be about that of an ordinary notebook (8.5x11"), and maybe 2" thick.

There. Was that worth $.02?

This is the same company that is the "Brunswick Corporation" today (Bowling alley equipment, pool tables, boats and outboard motors, medical stuff, temp buildings for the military, etc.). The company seems to have been in about everything at one time or another. Probably got into the radio business at the time they were in the recording business.

Date: 1992-07-13 16:53:28 UTC
From: brian@ucsd.edu
Message-ID: <13sce8INNg48@network.ucsd.edu>
Source record: 287478

Suggestions on some useful introductory texts on spread spectrum communications?

I have the ARRL Spread Spectrum Sourcebook, and I'm quite disappointed:
there are only a few technical articles; most of the book seems to be
taken up with obsolete FCC rulings, feasability studies, and suchlike.
(I cannot help but wonder whether this is simply "padding" or whether
it is a response to a perceived amateur attitude that requires such an
incredible amount of assurance that the FCC won't whack our peepees for
experimenting with a new mode?)

I'm looking for something with no more than a moderate amount of math
(i.e., for the integrally-impaired) and a lot practical information.

Thanks!
- Brian

548. CRT radiation into ham rcvrs

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-13 17:58:01 UTC
From: price@cod.nosc.mil
Message-ID: <9207131757.AA21447@cod.nosc.mil>
Source record: 287485

You guys have probably discussed this at length before, but I haven't been paying attention.

When one buys the garden variety IBM clone with an "FCC Type B" approved monitor and sits it next to the average rice box, will the rice box hear computer birdies all over the place? Or are these monitors pretty clean from an EMI/RFI standpoint? Are color monitors worse than monochrome? Are there any standard "fixes?"

I presume there are problems going the other way, too--i.e. wiping out the monitor's display with RFI from my Xcvr--but I think I can handle that.

Thanks in advance for any advice--Jim, K6ZH

> ~12V battery pack.
>
> "I'd say u puta bigger dan 8.4V pack on a 2AT, and yu may get smoke!"

A little history here. Personal, and luckily, non-fatal.

I've had some degree of experience with higher-than-recommended voltages on the 2AT radios, and can tell you that the following are likely to occur: 1) The final transistor will fail; 2) the final transistor will desolder from the small heatsink on the back of the radio; 3) you'll burn your hand on the beltclip; 4) the radio will squeal and squeek and make all sorts of noxious sounds; 5) you'll be prosecuted for torturing guinea pigs (see 4, above).

The radio WILL not work at that voltage for long, or correctly. It was just not designed for that voltage, and the manual was pretty specific about that. The manual was proven out by a fair number of folks who figured it was all a trick to get 'em to buy new radios for more power...

Not all of my experiences have been bad. Notice that I said both the rudeness and the generosity of the ham community. Actually, my experience has been more positive than negative. Perhaps that's why the negative experiences are so memorable.

I guess now I should relate some of the positive for you. An extra class ham locally helped me install my mobile rig in my new Subaru Legacy. I'm taking him out to dinner tomorrow to say "thanks." My blind YL ham was having trouble with TVI and RFI in her shack. A local ham came up and did a site inspection for her and told me what I could do to help the situation. (I wasn't a ham yet and was just learning about TVI and RFI). I ran out of gas one day on the way to work. A local ham showed up within 10 minutes of my distress call with a gallon of gas. This past weekend I attended the

"Mormon Miracle Pageant" down in Manti, Utah. It's an outdoor, under the stars, affair. My YL friend and I took our HTs and we had a great time meeting other hams present from other parts of Utah. It was like these guys had known us in high school. A ham from San Diego, California at the pageant tapped my blind friend on the shoulder and introduced himself when he saw her HT. On the 2 hour drive back to Salt Lake City in the middle of the night my friend in another car, me, and another ham kept each other awake by talking on 2m. It was great.

Oh, I also had a great time on field day. My blind YL friend and I made contacts from her shack. We weren't competing but just having fun. The hams we met were just great--polite and friendly (even when they sounded like they really needed some sleep).

Yes, ham radio is a great hobby. I guess that was why I was lamenting the small percentage of hams that spoil it by their rudeness and intimidation.

Likewise, requiring knowledge and ability to send Morse at 13wpm as a
requirement for non-CW activity in the HF bands is also mostly
(actually totally) irrelevant.

Actually, in the new version of the manual (electronically distributed)
it discusses the #123 secret code. And, BTW, my #355 doesn't just beep,
it displays a number. I have noticed this number to be idfferent on three
different 580's that I've tried it on. It does not seem to be related to
the serial number on the back.

Cheers,

Doug

>he didn't want to talk anyone running less than 500 watts.

Unfortunately, the problem described, here, is one of the
travails of life. Fortunately, the number of helpful,
knowledgeable, and generous hans far exceeds the number of
"old farts" who do their best to sabotage life on the bands.
The "old farts" probably started life as young farts. You
can hear and see tomorrows "old farts" in action at the local
grocery store blowing off steam because they didn't get a
candy bar.
Somewhere in life, like a maggot metamorphosing into a
fly, they change from young fart to "old fart." Some make
the change at 16 when they realize that they know everything
and don't need to go to school any more. Others gradually
decay into fartdom with years, and still others never go
through this metamorphosis.
Most radio clubs will have at least one "old fart." He
believes that everything new is worthless unless his sleeve
happened to bump the on/off switch on a computer and it did
something besides catch fire, at which point, he is an
instant expert.
What does one do about "old farts?" Just remember that
their little brains are filled to overflowing and you can't
tell them anything, at all. Ignore them totally. Fartdom
tends to be very contagious and these guys love nothing more
than to know that they are pushing everybody's buttons.
Do I follow my own advice? Probably not as often as I
should, but one should not forget that a few bad apples
needn't spoil the barrel.

Prob'ly an AMer on 75 meter phone? They don't like talking with anyone who doesn't 'glow in the dark'! You really need a Collins 32V or a Johnson 'Desk Top Kilowatt' to join this club. One guy around here uses an old Gates broadcast transmitter. My TR-4Cw is almost passable, but they can spot the controlled carrier a continent away. Solid state Japanese 'bell and whistle' rigs which happen to do AM usually don't cut it. :-)

100 watts is plenty of power - assuming a good antenna/feed/tuner system and good band conditions. It is amazing what 10 watts can do on 10 meters when the band is open! Most hams only use high power for Serious Contesting, marginal band conditions, and for Serious Dxing. (Oh yes, and Serious AMing on 75 meters. :-)

|> Since when did
|> a bunch of hams own a frequency? Why could I not use a frequency if
|> they were clearly not transmitting on it?

Simply listening is not enough on HF. Proper protocol is to ask "Is the frequency in use?" before calling CQ. The major reason is that you can often only hear one side of a conversation on HF. You may be innocently interfering with a QSO since you may not be able to hear the other side.

I can't copy callsigns of many DX stations who are trying to speak
English due to accents. However working CW eliminates the problem.
Therefore I work CW contests and avoid SSB contests.

Callsigns sound the same in all languages on CW.

Clearly, Cheryl, not *ALL* Extra Class hams fit within the description you've published any more than *ALL* teenagers are corrupt and immoral or *ALL* no-code Techs are poor operators.

Speaking as one who has been around the ham bands for more than six months, you'll find all varieties of individual .... just emulate the ones you respect and try to persuade (read "show by example") those who may lack a bit in their protocol.

But, whatever you do, do ENJOY ham radio .... there's something there for everyone.

My Yaesu 767 hears birdies all over the place when the preamp is turned on. This
is after grounding everything to a fare-thee-well, and putting toroids on all cables. This is with a monochrome monitor too. Has anyone tried things like lining
the monitor with foil (with air holes of course) or spraying with metal paint?

Two entirely separate issues. If they don't follow the FCC rules, then the rules should be enforced. But the rules don't require QSOs themselves (as opposed to IDs) to be in English, nor should they.

|> America is supposed to be a multitude of peoples with a *common*

The irony of immediately following the phrase "...desire for freedom" with "We cannot permit..." speaks volumes for itself. There's little more I can say on this subject; you've just said it all.

Urr, by knowing International Morse Code, what does one understand about how some things work? I would think that knowing CW means that one can now carry on a CW conversation. Is there anything else knowing CW buys one?

Correct. But, in this case, the person was not interfering with anyone.
The people just wanted them to move off the frequency since some of them
monitored it. They have no right to do that - it is poor manners to even
ask.

: I didn't think VEs could examine realtives? OK, so you're not married yet, but it doesn't look too good.

Why not? VEs can give examinations to their best friends - lifelong buddies, for example. I see nothing wrong with it - especially for a no-code license.

With the exam pool being public knowledge, the require for technical ability is absolutely zero - all it requires is memorization. Once you have your license, all you have to do is operate within the rules - which change from time to time. There is nothing that requires you to remember what was asked on the tests. In other words, most of it is "regurgitate and forget".

I took the plunge and took my radio all apart today and looked at it
under a microscope. The first thing I noticed is that there is a
hitachi part that when the battery is moved and the copper foil is moved
back has a number like XB0148b. When I press #355 I get 0184b on my display,
pretty neat trick I must say.

I also noticed that there were three(3) "zero"-ohm surface mount resistors
on the "underside" of the processor board. I didn't have the balls or the
time to remove them and power-up-reset the radio and see what would happen.
I must say they have packed a lot of chips onto those boards and it will
be a while before I jump in and start unsoldering. I am hoping to hear from
someone what I can do by unsoldering things and see if it is worth it.

For general information, I have been able to open up "aircraft band" and
800-900 MHz by doing the mod as prescribed in the manual (RED wire).
This wire is very close to the processor chip named above, and is simply
a removal of ground from one leg of a resistor, I am not sure exactly
where this leads but will find out soon. The other mod I have made is
cutting the BLUE wire on the front panel surface mount board. This
allows transmit in the FM part of VHF and the 4XX-5XX MHZ band of UHF.
I have not found out how to transmit in the 902-92? MHz amateur band
yet, but that is my goal.

P.S. I am looking in to what the procesor part is and maybe I can dis
assemble the codes in it. The part number is Hitachi HD 4074719H.

Anyone recognize it?

Copied from Packet......
I thought this worthy of posting here.

73, Monte Bateman
WB5RZX @ WB5RZX.OK

R:920624/0453Z @:N9GQR.#WCIL.IL.USA.NA [Galesburg] FBB5.14b #: 996

From: WB9FHI@N9GQR.#WCIL.IL.USA.NA

So...think the FCC won't ever stop by your place for a little chat, eh?
That's just what happened to a bunch of us over the last couple of weeks
here in Galesburg, Illinois. Don't bet it can't happen to you.
Since I manage the cable tv company here, we were on the list for an
inspection from one of the field engineers out of the Chicago area office.
There are 3 of us hams on the staff, so we asked him a lot of questions.
Here's what we learned:
The FCC inspects for one of three reasons: either as a result of
complaints (read that more than one); a routine audit; or, a survey of
a specific spectrum user at the request of one or more Commissioners. Most
of the inspections these days are of the survey type.
They check everybody! The targets most hit for inspections are, in no
particular order: cable tv systems, land mobile users (especially paging
companies) and directional AM broadcasters. But this guy visited several
two way radio repair shops, a grain company (they didn't have their license
on hand), and were even out at Radio Shack checking type acceptances on
the computers they sell! Weird!
They want to know if you have a copy of the rules for your particular
service. Don't have them? Expect a fine.
They didn't check ANY amateur operations. But they do like to know
that you have your ham license if you work in a communications related
business.
They check everyone's towers for lights and painting. That story you
heard about 20+ users all getting $8,000 fines EACH for being on a poorly
painted tower? Its true. Where is your club repeater located? Better
check that tower. Bad paint? No lights? Get the owner to fix it, get off
it or take up an $8k collection fast.
The guy checking us didn't check broadcast. Either he was too busy or
wasn't involved in that area, or didn't have the broadcast checklist. A
different guy came back to Galesburg the next week to do broadcast. Lesson
number 1 for broadcasters...its the public file that gets you fined. Lesson
number 2...blowing up the transmitter with the FCC guy standing there will
cause him to leave "not too impressed".
Treat these guys nicely and, if you have your act together, he may
even go to lunch with you (our's did).

The bottom line is...if you're in compliance you have nothing to worry about. But...don't think they won't come to your town. I'm still doing paper work for our company because of it.

I got alot of replies like this. Sorry guys, I already knew this, in fact I'm trying to get buffalo.edu to update their database with the 6/1/92 data.

Somewhere someone posted an ftp (quote "FTP") site that had the database in compressed split files named "xaa" to "xat". I even ftped them to my site combined them and uncompressed the result. But 45+meg was too much data for me to keep around. However, if I can find the address again I would like to pass it on to callsign.cs.buffalo.edu to get them to update their database.

> in place of a single SSB bandwidth??

Russ,

Two points of consideration.

First, why do you assume that all persons not involved in CW would therefore be using SSB. There are other modes than just CW and SSB. Many of the codeless newcomers to our hobby have shown a marked interest in the digital modes, and these take substantially less bandwidth than SSB.

Second, on the issue of spectrum efficiency, we have demonstrated with packet that several stations can share the same frequency. Even though a single packet QSO may take more space than the CW (due to FSK and bit rate considerations), sharing of frequencies should permit packet and other digital modes to be more efficient than CW.

Perhaps we ought to encourage people to learn about digital modes, not just CW. <grin>

580. RE: CRT radiation into ham receivers

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 11:07:27 UTC
From: dwilson@s850.mwc.EDU
Message-ID: <9207141107.AA04471@ucsd.edu>
Source record: 287516

Recently I had to add a VGA CRT to a M-8000 RTTY/FAX/etc decoder.
I experimented with a couple CRT's and discovered they are not all
equal. Kept the best and returned the others (all bought different
locations). The easily available Packard Bell was the worst.
Kept a Cumulus which I think is the same as a Samtron which was
comparable (but perhaps better--I could not simultaneously
compare them). I have heard that IBM CRTs put out little RF
radiation but have no way to confirm.

In the past, I once covered a CRT box with foil and cut holes in it
and kept the CRT in it. Grounded the foil. Worked prtty well.
Worked better than RF spray on the inside of the plastic case.

Computer CRT's are generally much worse QRM generators than mondern
TV's. Very unfortunate.

582. CRT radiation into ham rcvrs

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 11:49:59 UTC
From: pjml@swmis.nerc-swindon.ac.UK
Message-ID: <9207141242.AA11373@swgen-t>
Source record: 287517

This can be a *real* problem. Try the following:-

Filter the power-leads (wrap them round a torroid as close to the
equipment case as possible).

Use a screened cable from the system unit to the monitor. Again,
a toroid as close to the monitor as possible will help, but be careful
as the inductance could upset the display.

Beware of metallised spray-on coatings inside the display cabinet;
if you do not prepare the surface of the plastic properly (using an
etch-primer) you can find that the spray-on metallised coating flakes
off with heat & time. You then get a sort of conductive dandruff
sprinkled over the circuit-boards, with smoked chips as a result.
Check with the manufacturer of any conductive coatings you use, and get
the right primer for the particular plastic your case is made of.

Also, if you use the *wrong* type of spray-on coating, it can have permanent
effects on the plastic (like the solvents react with the plastic and
the whole lot ends up gooey and never hardens.....)

Finally, make sure you have a screened feeder between the RX and the
antenna; use good-quality coax, not grotty 'CB-type' which has poor
braid coverage and will allow noise to leak in.

>monitors worse than monochrome? Are there any standard "fixes?"

Yeah, these things are a problem. The computers radiate, but the monitors
are often worse. You fix it the normal way, with lots of shielding and
ferrite cores on all the cables. The conductive EMI sprays are useful on
the plastic monitor cases and copper screen wire bonded over all the openings
on the computer. Most of the radiation gets out along the seams where the case
joins. Good RF practice requires a screw every 2 inches while these things
may only have a total of six screws holding them together. Scrape the paint
so you get true metal to metal joins all along the seam. The disk drive
openings are difficult to fix because you have to be able to insert and
remove disks. Usually you just shield the *back* of the drive bay and live
with a little noise during disk accesses.

Source record: 287521

..... 75m AMer... Glow in the dark....

- Many AMers are utilizing old-buzzard receivers as complements to the transmitters. Their BFO's may be very unstable, if they have a BFO at all.

- Some of the modern day SSB gear takes a little twiddling to zero beat the AM signal. If you transmit any less than about 3 Khz+ from an AM qso, they will become upset. The old buzzard radio's can be very broad.

- Some of the OF AMers (licensed since spark, never touched Slot-Bucket [AM slang for SSB]), just ignore them :-)

- The Yaesu FT-1000 sounds superb in the AM mode. All the modern gear takes some knob turning to get them to run right on AM. Some of the manuals are confusing and a couple are wrong. Rule of thumb: 100 W PEP rig, adjust for 25W carrier-out w/o modulation and only want the ALC to wiggle a little.

- Because of the old receivers, AMers tend to run lots of power to compensate. AM community became very disgruntled with the new PEP output limit. I have heard a story that someone measured all the power into a rig (AC ...) and found that he was able to rip the power utility off because he got more power out than in :-)

- AMers operate on 75m between 3875 and 3890, 40m 7285 to 7300, 20m 14.286. These frequencies are published in the 2 AM magazines AM Press/Exchange and Electric Radio(?). |Most popular freq's|

- Like the other modes, AMers are constantly being jammed, interfered with, verbally attacked, and in one case burned out of their home. Malicious interference on 75m AM is incredible at times!

- SSB stations should be considerate when working near AM qso's (Older transmitters & Older receivers). AM stations will QSY out of their normal freq's because they are being interfered with or they wish to discuss something technical w/o a large roundtable.

- All AMers are not like W2VJZ.

- AMers choose to operate AM for several reasons to include:
1- Inexpensive equipment
2- Equipment can be repaired by operator
3- Equipment can be built from junk box
4- Fidelity
5- Collectors of an era gone by (Basement Museums :-)

- AMers have their bad elements, too.

Just a little blurb. Questions, comments- email me.

I'm looking for an article titled: "Extremely Low-Profile
Helix Radiating a Circularly Polarized Wave" by H. Nakano published
in the June 1991 IEEE Transactions on Antennas and Propagation.

My local library doesn't have it. Can anyone send me a copy or tell
me where to find it?

Thanks...Steve

I have not seen any Field Day excerpts as of yet. Once again I had to
miss field day. I really enjoyed the excerpts folks posted here last year.
They kind of take the place of field day for me and help me experience
some field day joy!

So to those who participated in field day this year, lets hear from you!

592. Looking for plans for 2m GaAs FET preamp and 2m Beam Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 16:36:12 UTC
From: dave@hp1
Message-ID: <1992Jul14.163612.283@hp1.uucp>
Source record: 287336

Hi,

I want to put together a 2m base station and I'm searching for plans to
build what I can. I understand there are plans floating around for inline
GaAs preamps. Would someone who has this please get in contact with me.

Also, how about a hot set of plans for a 2m beam. ARRL handbook is a good
source I expect. Any other sources?

thanks very much

593. STS-47 SAREX fact sheet

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 17:07:56 UTC
From: jmaynard@oac.hsc.uth.tmc.edu
Message-ID: <6936@lib.tmc.edu>
Source record: 287524
Cross-posted to: rec.radio.amateur.misc,sci.space,sci.space.shuttle

Shuttle Amateur Radio Experiment (SAREX) Fact Sheet

STS-47 Space Shuttle Endeavour

When: Mid-September, 1992 for 6 days of 2 meter operations.

Where: Earth Orbit. Altitude 300 kilometers, with radio coverage of latitudes from 70 degrees North to 70 degrees South.

Operators: Dr. Jay Apt N5QWL and Dr. Mamoru Mohri 7L2NJY.
N5QWL is the flight engineer for STS-47 and will operate the shuttle systems during the "night" shift, while 7L2NJY will be one of the scientists performing experiments in a laboratory in the shuttle's cargo bay during the "day" shift.

Modes: FM Voice
VOICE CALL SIGNS: N5QWL and 7L2NJY

Packet (Beacons giving daily mission activities by N5QWL daily if I get a chance, and robot QSOs - successful connects will be issued a contact number by the robot)
PACKET CALL SIGN: W5RRR-1

Frequencies: We will operate split. PLEASE DO NOT TRANSMIT ON THE DOWNLINK FREQUENCY!

VOICE: Downlink (shuttle transmits) on 145.55 MHz
Uplink (ground transmits) on 144.95, 144.91, 144.97 (except over Europe) - we'll listen on those 3 frequencies to spread out the pileup a bit.
Uplink for Europe only: 144.80, 144.75, 144.70

Successful QSOs on voice will be facilitated by using standard international phonetics for your call sign. We will not answer any stations using non-standard phonetics. Use your entire call sign - we log with an audio tape recorder. Do not use our call sign - passes are very short, and we want to work as many folks as possible.

PACKET: Downlink (shuttle transmits) on 145.55
Uplink (ground transmits) on 144.70 (worldwide)

If you can, decrease your radio's deviation to 3 KHz (most are initially set at 5 KHz) and compensate for the Doppler shift. If you cannot, wait until a minute or 90 seconds after we come over your horizon to transmit - that will put you within our IF. If

a station transmits without following these suggestions, we just hear what sounds like a noisy carrier. The above applies to both voice and packet.

QSL via: N5QWL, 806 Shorewood Drive, Seabrook, Texas 77586 USA

Include a self-addressed stamped envelope (SASE).

Non-US stations include a self addressed envelope with $0.50 of US postage affixed or appropriate IRCs.

Include the Callsign worked, Date, UTC, Mode, and Frequency.
For packet contacts, include the QSO number issued by the robot.

SWL QSL's: Include the Callsign heard, Date, UTC, Mode, and Frequency.

Information during the mission:
AMSAT bulletins, Compuserve, Genie, Prodigy, local packet bulletin boards, ARRL bulletins, and HF voice from NASA Johnson Space Center ARC, Houston, Texas, W5RRR, or NASA Goddard Spaceflight Center ARC, Greenbelt, Maryland, WA3NAN, frequencies listed below.

W5RRR may be found on or near: 7.215, 14.280, 21.360, and 28.400.
WA3NAN retransmits NASA Select Audio and SAREX bulletins simultaneously on or near 3.860, 7.185, 14.295, 21.395, and 28.650.

The NASA Info BBS at Johnson Space Center, Houston, will also carry Keplerian elements and SAREX bulletins. (713) 483-2500, 1200 baud, 8-N-1. At the ENTER NUMBER: prompt, type 62511 <return> and log onto the BBS. The Keps and bulletins will be in the welcome message. Disconnect rapidly to facilitate access by others.

Operations Notes:

N5QWL will be asleep over most USA passes, and 7L2NJY will be busy with laboratory duties for most US passes, so try us on packet over the USA. Remember, our packet call sign is W5RRR-1. We'll try to work voice (1) when we are not otherwise engaged, and (2) at night or when the ground is cloudy (we are generally busy taking pictures of the Earth during clear daylight passes). Our orbit will carry us over the Northern hemisphere in daylight.

We plan to work 6 schools on this mission: 2 in the US, 3 in Australia, and 1 in Europe or Africa.

We do not plan any orbiter maneuvers after the first 6 hours of the flight, so orbital elements obtained early in the flight ought to be pretty good for the entire flight. If I can get to it, I'll activate the SAREX about 3 hours into the mission; deactivation will occur at about 6 days, 8 hours after launch.

The orbiter attitude is planned to be tail down, payload bay south. The SAREX antenna will be in the right forward window, so most contacts

should have a good antenna pattern from AOS to TCA (time of closest approach).

I take it these guys are using receivers built by HH Scott and Atwater Kent.
As it is said in the ARRL Handbook, "When buying old equipment, avoid gear
that was low quality when it was new..." or something like that.

Any decent receiver built by Hammarlund, Collins, National, Hallicrafters,
Heathkit, Eddystone, built since 1945 is quite sensitive, resistant to front
end overload, and has sufficent selectivity options to work in todays band
conditions.

the key word here is decent. The five tube beautified am radios don't cut
it, beware especially of Heathkit, Hallicrafters, National, and Eddystone
who built some nice receivers and some real junk.

The words old and AM are not synonymous with junk and inadiquate.

Remember, the ham community is diverse as is our society in general.
I am a rude and vulgar person (esp. on the radio) and prefer to associate
with similarly dispositioned people on the air. If you operate in the
40M "war zone" or on a "war repeater" such as 147.435 in LA, you had better
be ready to sling some shit. However, I do try hard not to offend others
when operating on other "non-war" freqs. As long as designated "war zones"
exist, we "bad apples" can coexist with out offending.

600. Larsen antennas -- not bad at all

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 19:06:42 UTC
From: wayne@hpfcso.FC.HP.COM
Message-ID: <103360095@hpfcso.FC.HP.COM>
Source record: 287460

My curiosity got the best of me, so I used an HP 4191A rf impedance analyzer to check out the antenna installation on my Jeep. This is a regular Larsen NMO permanent mount. Measurements were taken at the radio end of the antenna cable, which is about 9 feet of RG-214 instead of the Larsen-supplied coax. This is low-loss stuff so it shouldn't noticeably affect the results.

First the quarter-wave whip (I can drive into the garage without destroying the antenna with this one). Not surprisingly, it is not a real good match to a 50-ohm system. The whip had previously been cut to length according to the Larsen cutting chart. The reflection coefficient and VSWR look like this:

freq refl coeff VSWR

144.0 0.188 1.46 : 1
145.0 0.185 1.45 : 1
146.0 0.179 1.44 : 1
147.0 0.171 1.41 : 1
148.0 0.158 1.38 : 1

(refl coeff = absolute value of the reflection coefficient)

The VSWR steadily improved with frequency. Is the cutting chart right? Maybe not. The real part of the impedance is close to 50 ohms near the band center but there is a significant imaginary component.

The second antenna was a newly-acquired 5/8 wave, which I cut to optimum length with the aid of the 4191A. (The optimum length turned out to be 48.9 inches. Your definition of optimum may vary depending on the frequency range of interest.) The resulting VSWR curve dips to a minimum very nicely at the band center and isn't too bad at the edges:

freq refl coeff VSWR

144.0 0.137 1.32 : 1
145.0 0.084 1.18 : 1
146.0 0.054 1.11 : 1 (best frequency at 0.2 MHz resolution)
147.0 0.079 1.17 : 1
148.0 0.133 1.31 : 1

Lastly, I looked at the dual-bander. This antenna is supposed to be pre-cut at the factory, and apparently is a little bit of a compromise. On the 2 m band it tends to favor the high end of the band:

freq refl coeff VSWR

144.0 0.174 1.42 : 1
145.0 0.133 1.31 : 1
146.0 0.092 1.20 : 1

147.0 0.056 1.12 : 1
147.6 0.047 1.10 : 1 (best frequency at 0.2 MHz resolution)
148.0 0.053 1.11 : 1

On the 70 cm band the overall VSWR curve is W-shaped, with best performance
on the 440 to 450 MHz portion:

freq refl coeff VSWR

440.0 0.175 1.42 : 1
442.0 0.086 1.19 : 1
443.2 0.054 1.11 : 1 (best frequency at 0.2 MHz resolution)
444.0 0.075 1.16 : 1
446.0 0.161 1.38 : 1
448.0 0.216 1.55 : 1
450.0 0.220 1.56 : 1

The second VSWR minimum was at 429 MHz (VSWR = 1.43 : 1).

How about a lot of fun? Actually what does it buy you is the ability to build
cheap CW rigs and to get on the air that way. When the transmit audio tube
died on my Swan I was still able to use the CW portion and was able to stay
on the air that way. If I didn't know CW I would have been out of luck until
my new tube showed up. I have found that CW really does add to the flavor of
Amateur Radio for me. I've had more fun working CW and can't imagine Ham Radio
with out it. I'm glad I had to learn it because I would have missed so much
with out it. It's days are numbered as a requirement but somehow typing at
keyboard won't be the same. There is no real rational reason to have it as
a requirement though.

Jeff

603. New HEATH(kit) catalogue

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-14 20:55:30 UTC
From: tonyp@convex.com
Message-ID: <1992Jul14.205530.13668@convex.com>
Source record: 287334

I just received the latest HEATH catalog.

They're denying their demise, but say instead that
they're just getting out of the kit market.

The give several reasons. Some are valid, some are
two-sided. Things like:

surface-mount technology - one component replaces so many

There are still alot of things that don't need to go
surface-mount. I don't see why they couldn't make a
current version of the HW-16. That rig was a BLAST!
As I recall, it was a handful of parts on a circuit
board. Full QSK (in the 60's?). Surely they could
have replaced the tubes, and tightened up the
circuitry a bit - and still sold it way under
anything else on the market.

that kits aren't any fun anymore.

I don't recall Heath making a "fun" kit since the
SB/HW line died. This is a marketing problem.

Machines can build it cheaper.

It seems to me that the same machine that "picks"
a component, and then sticks it on a board could
just as easily drop it into a box on an assembly
line.

Now, the manufacturer is saving the expense of
people checking over the wave-solder job, and
then troubleshooting problems. Transformers don't
wire themselves into place either, so now you're
also saving on assembly line people.

no one has the time to spend anymore in kitbuilding.

The ol' "quality time" thing again. I don't know
what modern dads & sons (daughters) do now, but
me an' my dad had lots of quality time together
putting together kits (I learnt some of my best
swear words during the famous Griefkit line...

"STEP 99-01: and now, tune for minimum smoke")

Hummm - I wonder if the Japanese could make a kit
line "work".

My I suggest you make a trip to a local ham shop and, for $10, obtain the complete manual. Be sure to check the expiration date ... it'll be on the front cover ... to asure you're having "good" information.

Alternately, check around for a local ham club .... Toledo has at least one ... and check into classes. Many are no-charge except for materials.

Good luck ... hope to work you one day.

Regards,

Carl <> K8NHE

When I got into ham radio a little over a year ago I came in fully expecting
that 99% would be great people and the other 1% to be absolute rude idiots.
So far I haven't been disapointed. I have been rude to only once so far and
really have no bad experiences to relate. Yes, I have heard bad language and
the jammers but they are so few in relation to the others that are fine people
that it makes ham radio all that much better. Where else can you go to and
ask out loud that I need help or that I want to chat and have people come
running? If you are carrying a HT like Cheryl and a fellow ham sees you
he will usually come up and say hello. Maybe it's just me but I find this
to be one great hobby that seems to bring out the best in people.

It's much easier than you think for errors to creep in. Nowdays, HP uses computer-generated schematics and PC artwork with automatic cross checks for errors. (If the board works, the schematic must be correct.) But if you check manuals for older products, you would be amazed at the number of errors that crept in, despite several people checking and double-checking each schematic.

For some of you people who may have gotten RGRAM27.ZIP, please dis-regard the request for a 15.00 registration fee at this time. I wish for the program to be used and tested at this time. The version 2.7 ST that was released is the shareware version that is not fully functional. I am nearly finished with the full package which will allow transfer of the gathered messages and individuals, too via packet and or land-line modems. Lets' get it like you think it ought to be before I try to re-coup any costs.

So, please disregard the ORDER.DOC and reigstration docs in the zip file. Also, this version will only run 10 times after which it will not run anymore and will delete itself and the files related only to RGRAM. SO, if you find it of use, please make sure the zip file is not deleted so you may dump it in your directory again. The message.dat file it creates when you save a gram should not be effected, however I would back this file up to make sure. That is about all, I will post another message as development takes place with this program. I may opt for you to donate to your club or favorite charity instead of sending my a registration fee and just keep posting the newest version so you can download it through FTP. 73's to you all and let me know what you think of the program in the aspect that can it be developed into a good useful HAM Program.

Geert, I originally posted the message about the Radio Shack sales clerk transmitting on ham frequencies here in the U.S. Let me clear up any

misconceptions: It isn't RADIO Shack or Tandy doing it, just one or two people. Tandy's policy isn't to allow this kind of thing. Maybe enough will be said from UPPER echelons of management at Tandy to give the guy the word that he has been found out. We just don't want non Hams transmitting on our repeaters. Yes, you are indeed right. It is usually ones own fleas that bite, however in this case, the fleas have jumped to the other dog. I wish for it to be clear I AM NOT flaming TANDY, I purchase quite a few items there. We all around here got tired of the "QUIET Ker-chunker". Hope this clear up any misconception.

Sounds like the above incident happened on phone, not CW. My experience
is that the vast majority of the jerks, jammers and pirates are found
on the phone end of the bands. Why not give CW a try -- you might come
away with a more positive impression of hams.

Obviously, you are learning the things that can happen on HAM Bandwidths.
Yes, I have to agree that many "SEASONED" HAMS are griping about the No Code
Techs. But you DO NOT have to let them run you off a frequency, Cheryl! Never
let them do that. The way I see it, If they treated me that way, I wouldn't
want to talk to them! They are just being old goats when they act like they
own a frequency. Just ignore them, the same as they do you are they are gonna
have a bigger laugh than you. I am advanced class and it is not any more
important than being a novice class, it just offers me more bandwidth.

CASE in point: And old friend, 68 years old is a No-Code Technician, not
because he wants to be but because he has a medical problem and can't hear
tones. Several people even Technicians with 5 words per minute Code passed
have made commetns about No-Code technicians. Well, it hurt that old guys

feelings real bad and mine too, listening to them. What if they were in the same situation? He took it good, though, he knew they were old goats just as much as they knew they were. Now he ignores when they call him - serves them right. His quote - "There is something for everyone in America!".

Just remember that!

73's from and Advanced Class to a No-Code Technician- be proud of it! Write when you like!

618. 470 local oscillator frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 02:45:03 UTC
From: rambler@pnet51.orb.mn.org
Message-ID: <8082@orbit.cts.com>
Source record: 286781

Here is some Yaesu FT 470 technical tidbits

VHF First IF 21.7 mhz
From 106 to 156.975 mhz the first mixer uses high side injection
the local oscillator frequency will range from 127.7 to 178.575 mhz.

From 157 to 201 mhz, the first mixer uses low side injection
the local oscillator frequency will range from 135.3 to 179.3 mhz.

UHF First IF 47.75 mhz
From 400 to 500 mhz the fist mixer uses low side injection.
the local oscillator frequency will range from 352.25 to 452.25 mhz.

the UHF local oscillator also has a strong first harmonic. if you
near a strong 704.5 to 904.5 mhz signal, you should be able to
tune it in. I have done so, without any problem, except poor sensitivity.

-- Dan Meyer
N0KFB

P.S. has anyone figured out how to tx on VHF beyond 174 mhz?
If anyone does, it should be easy to set this thing up
for operation on 220 mhz!

620. W2A UHF receiver mod

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 03:26:55 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1992Jul14.222655.41552@kuhub.cc.ukans.edu>
Source record: 287352

There are many mods to the Icom W2A, but one I recently discovered, courtesy of another ham and Icom is a mod to the UHF receiver section of the HT. For those of you with the W2A, you've probably noticed that the sensitivity of the W2A isn't too bad in the 440 ham band, but once your tune above 450, things go to hell fast. My 24AT is much more sensitive than the W2A in the 450-460 range, and ICOM is aware of the way the W2A works in this regard. As I understand, it is because, above 450mhz, the unit goes into wideband mode, and the front end gets hit with lots of signals--- while in the 440-450 range, the unit keeps several filters in the front end.

ICOM has a mod to defeat this "wideband" mode, keeping the amatuer filtering in ALL the time. Supposedly this takes care of the drop in sensitivity in the 450-460 range -- but my question is -- to what effect will this mod cause in other frequency ranges. I understand the mod involves soldering a glass diode from one surface mount component to another component and cutting a circuit trace on the board.

Has anyone tried this mod? How does it work? Any improved 450-460 sensitivity? DO you lose the 800-900 range?

>
>I think slow Morse is used to make them easier to hear. One is often
>dealing with a very weak signal and a lot of atmospheric noise (crashes
>of lightning, etc.).

Well, I know it can be done. It is possible to put voice on a
VOR beacon and have the beacon work as intended. I remember there used
to be a VOR beacon just North of Copenhagen Denmark (OZ) that carried
voice weather.

The voice can't be 100% modulated - neither is the Morris ID -,
so with the low modulation and the VOR whizzing around it sounds pretty
cruddy.

But think of the opportunities. Advertising. "This is VOR Beacon
PDZ brought to you by Flamo AvGas. Next time you're on the ground, fill
up with Flamo".

The revenue gathered from VOR commercials could help pay for
the whole ATC system. Capitalism at its finest.

Of course, language won't be a problem either. Whereas you can
fly Morris free, you need to speak English to chat to the ATC people in
the tower. Yes, eenglesh is the intenational language of pilots.

I ran into the same problem on my ICOM IC-3220H. It had really bad
out of band receive sensitivity on UHF (about 300 uV vs 0.5 uV in band)
After carefully reviewing the schematic, service manual, and the radio;
another ham and myself discovered a circuit board that was in the radio,
but not on any of the schematics. It was;however,on the parts list. This
turned out to be the wideband receive section of the radio. After
drawing our own schematic, we were able to modify it to give us about
10 uV receive sensitivity across the entire 400-470 band (a little less
sensitivity toward the band edges). This was clearly a deliberate
omission from the schematic, because there was a big vacant area with a
single line going through the diagram where this board would have been
located. Never trust a schematic to be 100% correct.

623. GLB 414 VHF Transceivers

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 03:57:29 UTC
From: David_Mensing.Roch817@xerox.COM
Message-ID: <"15-Jul-92.13:51:13.EDT".*.David_Mensing.Roch817@Xerox.com>
Source record: 287429

I just purchased 4 VHF transceivers (6 meters, 2 meters and 440 mhz) and was hoping someone out there has documentation for these units. The radios were manufactured by GLB Electronics in Buffalo, NY and carry a model number of GLB 414. I know that these date back to 1985 or before.

If anyone has any schematics, user documentation or maybe just remembers something about these units or GLB Electronics I would really like to hear about it.

Thanks,
Dave Mensing

I understand Alan.... I find that there is software for SSTV packages... maybe that is what the person is looking for? I only commented on his general request for ATV.

It seems that the software that is available is for the graphics capablities for the PC's, Atari's and Amiga's. Not having ever used this mode... is it really neccessary as you say... or just a camera and video display all that is neccessary. Is there some video imaging going on now with computer graphics?

Yes, send email to: callbook@sat.datapoint.com
In body of letter: lookup <callsign>

It accepts multiple callsigns on the same line, and multiple lookup commands.
The results will be emailed back to you (I guess that's obvious).

When I was 13 (1956) I received my General Class license. Had lots of good times on the air. I continued until I left high school for college and didn't take the time to continue with amateur radio. I have more time now, more interest than ever, and want to get back into amateur radio. Could someone give me some pointers as to study materials, where test are given, how often, etc. Electronics has changed so much that I am somewhat concerned with that part of the test - code is no problem!

Thanks for any tips.......Jim

632. DXCC Awards & Endorsements

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 12:01:41 UTC
From: harp@bnr.ca
Message-ID: <harp.52@bnr.ca>
Source record: 287361

Attention ARRL members, especially DXers.

Are you waiting for a new DXCC award? Are you waiting for an endorsement to an old DXCC award? If you think you have been waiting along time your right. The DXCC desk at the ARRL is way behind. No one is saying how long it will take them to catch up.

They are converting over to a computer system. That is the excuse for no DXCC listings in March QST. You would think after this conversion that things would go faster. They were introducing a system where you could submit a diskette with your cards listed. They would pull this list up on a screen, check it against your cards, alter it if necessary and enter it into the computer. Sounds great to me. But that's not what's happening. April QST came out with a smaller than normal number of awards and endorsements and an announcement that the diskette entry system was terminated.

They are entering everything by hand. The number of applications processed is lower than before the computer. More people are applying than ever. How will they ever catch up? There is more DX on the air today than ever. DXpeditions work huge numbers of hams daily. This is going to cause the backlog to increase. Is anyone at headquarters computer literate? You are supposed to make the computer do your work for you. Do more with less effort and man power. It looks like they have more work with less man power with the new process.

The June QST had no DXCC awards. This time no explanation. What is going on?

If the DXCC award system is on computer we should be able to apply by answering questions via computer program, placing the data on a diskette. When the information on the diskette is verified, the DXCC computer should be able to read that diskette and update your records in seconds. Why does everything have to be entered by hand?

If you are an ARRL member and are waiting for your endorsement write to the league and your director and let them know that you find this unacceptable.

The current backlog is more than four months. No signs of catching up. If we had to wait this long for licences from Gettysburg we would be screaming. Why are we tolerating this situation?

>.....
>Carl <> K8NHE

Drop by Radio Shack and pick up "Now You're Talking" by the ARRL. cost is about $17. (ah, for the days when it was only $10). Book includes question pools used for novice and technician class examinations.

Drop e-mail to lhurder@arrl.org with your "real" address and ask for the prospective ham package. (should include info on exams in your area also).

Call (800) Got-2-Ham and ask for the National Amateur Radio Association's prospective ham package.

There is a practice test section on the Radio and Electronics RoundTable on GEnie, but it's not in a basic services area so you get to pay the going per minute rate when you use it. I haven't personally checked this out yet.

Last year was my first Field Day, but I was only able to be involved for about an hour or so, and nothing much happened. A family vacation was scheduled over Field Day this year, but I decided that I would try to be involved with a home-built QRP station. A couple of months before FD I began collecting parts for the "Ugly Weekender"/"Ugly Weekender II" transceiver, a 40-meter transmitter/receiver project that appeared in QST in 1981 and 1992. The construction of the rig was fairly straightforward, being "ugly construction" on unetched circuit board material. I built the rig a section at a time, testing each section after it was completed, and everything worked great the first time (which is amazing for someone with my electronics construction track record). At home, with my bench power supply, I was able to get the rig to put out about 1.5 watts (exactly what the article predicted).

The vacation site was a cabin near La Veta, Colorado, in a box canyon between the Spanish Peaks. I hadn't been there before, and hadn't expected to be down so low among the hills, but I decided to give it a shot anyway. My original plan was to erect a small tent near the cabin and operate from there for as long as my battery supply would last, but there was literally no place near the cabin flat enough to set up the tent, so I set up the rig in the cabin itself. I set up a 120-foot long wire running up the hill behind the cabin up in the trees as high as I could throw it, and used my MFJ tuner to tune it. My battery supply left a lot to be desired, though--two 6V lantern batteries in series--and I wasn't getting the current I needed. The rig could only muster up something between 0.25 and 0.5 watts.

I decided a quick nap before I started working Field Day was in order, since I had driven all night, and that nap turned into an unexpectedly

lengthy snooze, so I missed out on most of Saturday afternoon. I listened for a while Saturday night, but it was stormy and I had a hard time copying much; I called CQ for a while, to no avail. I had almost given up.

I slept again until Sunday morning, and when the rest of the family left for a morning hike, I stayed back to babysit my two youngest children, and decided to give it one more shot. I picked a frequency and sat on it, listening for an opening, calling stations when I could (but not being heard) and calling CQ FD when there was an opening. I didn't expect success, but I wasn't too disappointed, given my poor location. Then, amazingly, I heard my call (or part of it, "N0?ZQ") come back to me. I had to send my call several times, slowly, before the answering station could get it right, but eventually we made the exchange (it was a 2A KS station). By that time I was so buzzed I decided to keep at it for a while, and pretty soon I had netted a 2A WY station as well!

Time constraints and other obligations eventually shut down my station after a couple of hours, but those two QSOs were among the most exciting QSOs of my relatively brief ham career (licensed 1 year, recently upgraded to General). I am now officially hooked on QRP, and I can't wait to get started on my next rig!

Maybe next year I'll be able to be back here with the club folks for Field Day and experience that part of it, but I wouldn't trade this year's experience for anything. And I am especially grateful to those two stations who worked hard to pull my < 0.5W signal out and complete the QSOs (I don't have their call signs with me right now).

Well, having used to run ATV, I've found that a computer for generating special effects and graphics to MUCH more entertaining than watching a (seemingly) endless still shot of some guys spectrum analyzer. I also used a VCR and a character generator to decrease the boredom factor.

Just as a counterpoint for this, I would like to point out the actions of a HAM I've known for the past 24 years.

He purposely sends sloppy to keep the "no-coders with keyboards" from being able to QSO with him. This is despite the fact they they came down to CW portion wishing to see what this "CW stuff" is all about.

He also consistently tunes up his equipment on top of HF packet stations as quote "that never works anyways, and at least I'm not causing interference to any real people."

This is not a pro/anti CW posting, just a reminder that AH's are everywhere and the type of modes they choose to operate doesn't affect their ability to act accordingly.

The good news is that he's old and he'll be dead soon. The bad news is that he probably has infected others with his attitude.

639. Re: Field Day excerpts

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 14:52:19 UTC
From: ham@wam.umd.edu
Message-ID: <1992Jul15.145219.7201@wam.umd.edu>
Source record: 287364

My fiancee Chris and I and the two dogs took a Field Day voyage to a small island in the middle of a lake in SE Ontario this year. Two rowboat trips carried across my Kenwood TS-520S, a portable Honda generator, a dipole, a Hustler 6BTV trap vertical, clothing, food, and tons of other junk, which we proceeded to load into the 10x12 cabin with an 8x12 screened-in porch.

Setting up the antenna was extremely tough, seeing as how the mast had to be buried in the ground, and the entire island is a big slab of very hard rock. The tree canopy starts at about 12 feet, so finding a hole to put the antenna through merely added to the difficulties. After about an hour of struggling, both with the antenna and each other, it did go up, and will remain that way until September (last trip of the season)! Absolutely no desire to take it down or put it back up for another expedition.

Chris had just passed her no-code tech test, and coercing her to get on the air with me was diffucult, although my persistence eventually paid off, as her voice frequently punched through QRM that my voice could not get through. I worked 20 of the 24 hours, stopping only when 20 meters died around 2 am, and we netted 122 QSOs, over 100 of which were on 20m phone.

Was it worth the 9-1/2 hour ride each way from Maryland? Absolutely! Great fun, beautiful scenery, incredible weather (except for the T-storm that hit 10 minutes after I started operating), and the feeling that it was actually a vacation. I had to take off from work on Friday and Monday, and I felt very tired the rest of the week after Field Day, but we will probably repeat next year.

Hope y'all enjoyed FD as much as we did. Scott NF3I/VE3 and Chris now N3MXZ.

I am planning on attending the Atlanta hamfest which is this weekend,
but I have not seen where it is in Atlanta or the hours of opening.
Can anyone please post where it will be held, the hours of the hamfest,
and the talk-in frequency on 2 meteres?

Thanks a lot, Allen

>Steve, WB8IMY

I would like to add just a bit more. We MAY have the article and issue.
We have been going through both a Library and a Tech offices remodeling
and right now things are a bit less than fully organized.

As a second point, most of our changes in the technical content in QST
are deliberate. Much of the feedback about our content is that we are
too technical, with little information for those who do not have a BSEE.
Over the past year or so we have been responding to that kind of member
and potential-member feedback. Mark Wilson (mwilson@arrl.org) would welcome
any comments or suggestions for QST (or any League publication) content.

I personally find it difficult to understand how Steve's post about
the IEEE publication could be instantly built up to the conclusion that

this is what has changed QST content. It does indicate that Steve did
not know where the issue is, and may not have realized that our Technical
Department Secretary does have the IEEE address, but decisions about
the content of our publications do get quite a bit of thought.

In article <harp.52@bnr.ca> Alan writes:

> They are converting over to a computer system. That is the excuse for no
> DXCC listings in March QST. You would think after this conversion that
> things would go faster.

This is true. There are two reasons why things are slow:

1. Too many DXCC awards available - remember, the 17 and 12 meter
awards are recent editions.

2. Backfilling of DXCC data. The ARRL is putting all your old record
information into the computer when you apply for an endorsement.

> They were introducing a system where you could
> submit a diskette with your cards listed. They would pull this list up on
> a screen, check it against your cards, alter it if necessary and enter it
> into the computer. Sounds great to me. But that's not what's
> happening.

This was a disaster. People were submitting their endorsements on
floppy disk. This is *NOT* what the ARRL was requesting - all they
wanted was for you to submit your old DXCC data on diskette, so they
wouldn't have to take the time "backfilling" your awards (see above).
This turned out to be more trouble than it was worth, so they
discontinued it.

> They are entering everything by hand. The number of applications processed
> is lower than before the computer. More people are applying than
> ever.

Sure they are. Backfilling hundreds of confirmed countries takes a
long time. And since there are new awards, more people are
applying.

The ARRL is doing the best they can with the limited resources they
had. I believe Don Search, W3AZD, left because of the computer
situation. In comments to me, he said the computer was going to slow
everything down, and they shouldn't move in that direction. Initially
this is true, but in the long run the computer helps everyone. For
example, if I have 10, 40 and 80 meter DXCC awards on file in the
computer, I only have to submit cards for 15 and 20 to apply for
5BDXCC.

If you have comments for the ARRL DXCC desk, you can reach them at:

dxcc@arrl.org

I just called the DXCC desk and asked. The average is 4 months
currently. Not great, but better than a couple years ago.

I guess you've never been involved with such a conversion. Consider that
you have to take all those paper records and create the initial database!
That really can only be done by hand with todays technology. There
is not such thing as a universal handwritting analyzer! So...by hand
it must be. DXCC has been around ALONG time thus there are LOTS of
records. The front end conversion to a computer is ALWAYS painful.

> stuff deleted..

Fair enough. If you have a gripe take it to your director. Be advised that there just isn't going to be much that can be done to speed things up. It takes the time it takes!

644. Police & HTs as Scanners

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 15:45:15 UTC
From: turini@gdls.UUCP
Message-ID: <4818@gdls.UUCP>
Source record: 287369

I know that there has been a lot of discussion concerning "scanner laws" and ham radios on the net, and I don't want to re-start a long discourse, but I have been hearing about a number of hams in Michigan being hassled for having an amateur radio in their car that is capable of receiving the police bands. What is disturbing is that a few months ago Michigan was promoted as having one of the most modern laws that exempted hams!

In discussing this with other hams, several questions have arisen:

1. First, does anyone know what the number of the Law was and how to get a copy of it?

2. Should one keep a copy of the law in one's vehicle to show to the officer when he stops you?

3. If you are passing thru another state (on business, or to get to a vacation spot) is there such a thing as "free passage" so that the police can't confiscate your rig?

4. In states that have laws prohibiting radar detectors there are signs at the borders stating such. Are such signs required for scanners.

5. What is the best way to handle being stopped?

6. What is the ARRL's position on this?

Are there any lawyers out there who could comment on this? or anyone from the ARRL?

Sorry if there is a FAQ for this, I obviously missed it.

> Jesus is the Lord of my life!

Well let me see, it rained all contest. 70 MHz and 432 MHz did not work very
well. 144 MHz was flat as was 1296 MHz. As our site is so bad it is not
surprising. We made very few contacts into continental Europe on 144 MHz.
None at all on the higher bands. At least we had full legal power on 144 MHz
this year (400W) we would have made virtually no contacts at all with the
restricted section 25 W limit.

Oh, or did you mean USA field day ?

I assume not as you did not say so, nor did you say if it was VHF or HF
field day.

No wonder the technical content of QST has gone down. No one at
ARRL headquarters subscribes to applicable IEEE transactions, OR EVEN
KNOWS WHERE TO FIND THEM!

Anyway, IEEE journals can normally be found at any engineering college library.
You could also order a copy of that issue directly from
the IEEE in New York City.

> a copy of it?

There is a publication that summarizes most of the scanner laws in most states
(which might be out of date) that is mentioned in Bob Parnass's Introduction to
Scanning, posted to rec.radio.shortwave.

You might also try the local library and look up the relevant state law/code
(most such law books have good keyword and case-precedent indices).

>
> 2. Should one keep a copy of the law in one's vehicle to show to the
> officer when he stops you?

Well maybe, although I doubt a police officer would take kindly to having the
law lectured to him (if you're accused by an officer, you are guilty in his
eyes, better to argue with a judge, who doesn't have a gun, handcuffs, and
baton).

>
> 3. If you are passing thru another state (on business, or to get to a
> vacation spot) is there such a thing as "free passage" so that the
> police can't confiscate your rig?

Not for any poor sucker who happened to wander into New Jersey before the law
was liberalized. This, and the fact that only New Jeresey residents could get
the required police permit, were two very specific objections mentioned in
FCC Docket 91-36 (more on this below).
>
> 4. In states that have laws prohibiting radar detectors there are signs
> at the borders stating such. Are such signs required for scanners.

Haven't seen any yet.

>
> 5. What is the best way to handle being stopped?

Same as with getting a speeding ticket. Be polite, state your case if you feel you have been wronged, but ultimately DO NOT ARGUE. Take it up with the judge. An argument with a police officer is an argument you can't win.

>
> 6. What is the ARRL's position on this?

They are obviously on our side and feel federal pre-emption is a GOOD THING, based on their comments to FCC Docket 91-36 (see below).

>
> Are there any lawyers out there who could comment on this? or anyone from the

>
> Bill KA4GAV

It's perfectly understandable that some of us on the net are in the dark on this issue, as the FCC has taken a VERY LONG time to act on 91-36. FCC Docket 91-36 (which is available via anonymous FTP from ftp.cs.buffalo.edu under subdirectory /pub/ham-radio) addressed the very questions that you have raised with regard to inconsistent laws and inconsistent enforcement. The Docket solicits comments for a federal pre-emption of scanner laws for licensed amateurs. This was over a year ago with not a peep from the FCC yet. The ARRL, as well as other organizations and individuals, did a very good job of arguing our case and should be commended. In the meantime, all we can do is wait, while lobbying locally for modification of laws (which, of course, doesn't prevent other laws from springing up elsewhere).

It's now 25 times the yearly rate, or $750. You can pay all at once, or in eight quarterly payments.

When I got mine in 1978-9 (I did the payment plan), it was 20 times the $12 annual rate. That's been one of the best $240 purchases I've ever made... I did mine when I did because it was going from 20 to 25 times, or $300 total.

We had a similar incident here in New Orleans. Our club received a
notice because the tower we have one of our repeaters on was not
properly painted. It is owned by the sheriff's office and has no
commercial users on it, just public service agencies and our ham stuff.
It just goes to show that your never completely safe.

651. KY Scanner Law exemption for hams begins today!

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 17:46:51 UTC
From: hgpeach@ms.uky.edu
Message-ID: <1992Jul15.134651.16907@ms.uky.edu>
Source record: 287374

Kentucky becomes the last state in the US (As I understand it) to exempt amateur radio operators from its scanner law. The legislature passed a bill 3 months ago exepting hams from the law's provisions; the bill became law July 14/15. Up until now, a circa 1945 law has prohibited most folks from carrying ANY radio CAPABLE of being modified to receive a frequency WHICH COULD EVEN BE LICENSED to a police agency (I think that provision even includes HF doesn't it?). While the law unfortunately still remains in effect for most of the general population, hams are now exempted from its provisions, along with such folks as tow truck drivers and the press.

I'll second that. I didn't catch what your license class was (and am too
lazy to back up and check), but if you're license allows it (or when it
does), check out cw, especially on 30m --- it's been a while since I lived
on 30m, but when I did, 99.9999% of the cw ops who hung around there were
the type I always loved to run into...good folks who wanted to chat, meet
people, and enjoy the hobby. none of the rudeness, none of the bad
language (which I do use...but NOT on the air!), and (one of my personal
favorite dislikes) none of the
n5ial de ..... tnx fer call ur 59 73 es tnx n5ial de ..... sk dit dit
(QSY).
(not even worth an entry in the logbook....)

most of the time, the folks on 30m cruise at 25 wpm and up, but I never
heard a slow CQ (relatively slow, that is --- right around 13 wpm) go
unanswered. quite often, it would be answered by someone I'd worked or
heard at speeds of around 28 wpm.

I've also heard that 160m (all modes) is the same way, but I've never
actually worked 160.

you might also try out (my latest new mode) AMTOR --- similar reasons,
just a different mode. lots of good people seem to hang out on AMTOR.
just look for a CQ, or call CQ.

and, as some have already said, don't let the lids get you down. just
ignore them --- that's what irritates them the most.....if you argue with
them, or try to flame them over the air, they eat it up like a kid eating
candy.

and if someone says they won't talk to you because you're not running
enough power to make them happy (they clearly don't care about FCC regs),

explain to them the difference (about 7 dB) between 100W and 500W, and
then point out to them exactly how insignificant that difference really
is --- there are roughly 5 dB per S-unit, so we're talking no more than
a 2 S-unit difference in signal strength. ok, if you're marginal, it
helps...otherwise, it's a total waste of time (and power). then again,
there are people who seem to require a full kW to talk to someone
literally half a block away on 75m, too.....

In article <4818@gdls.UUCP> turini@gdls.UUCP (CSC @ GDLS) writes:
>I know that there has been a lot of discussion concerning "scanner laws" and
>ham radios on the net, and I don't want to re-start a long discourse, but
>I have been hearing about a number of hams in Michigan being hassled for
>having an amateur radio in their car that is capable of receiving the police
>bands. What is disturbing is that a few months ago Michigan was promoted as
>having one of the most modern laws that exempted hams!
>
>In discussing this with other hams, several questions have arisen:
>
>1. First, does anyone know what the number of the Law was and how to get
> a copy of it?

According to the 1991 edition of the "Listener's Lawbook" published by the
ANARC (Association of N. American Radio Clubs) the Michigan stutute is
Penal Code 750.508 (while it isn't that long, I'll defer typing the whole
thing in). The Michigan law includes an exemption as follows:

"unless such vehicle is used or owned....by a bonafide amateur radio
operator holding a technician class, general, advanced, or extra class
amateur license issued by the FCC,..."

Note that the exemption does NOT cover Novice licensed hams.

>2. Should one keep a copy of the law in one's vehicle to show to the
> officer when he stops you?

If there's been a problem, it can't hurt to have it available.

>3. If you are passing thru another state (on business, or to get to a
> vacation spot) is there such a thing as "free passage" so that the
> police can't confiscate your rig?

Not that I'm aware of. One of the cases in New Jersey a few years
ago involved a licensed ham from New York.

>4. In states that have laws prohibiting radar detectors there are signs
> at the borders stating such. Are such signs required for scanners.

I suspect not, the radar detector signs are probably just a curtesy and
not required by general law.

>5. What is the best way to handle being stopped?

Be polite, if you are being "pressed" about your radio and you are
exempt (eg. licensed ham other than a Novice) then mention you
have previously checked with other police in your home town and THEY
provided you with the information that Your installation is exempt.

If you are still being hastled, be patient and let it run its course. If you have the opportunity, you might ask "What the problem is?"

Assuming you have told the police you are a licensed ham (at which point you can be expected to show a copy of your license), then there shouldn't be any problem. If the cop persists and (worst case) arrest or confiscates your radio gear, then I'd see a lawyer quick and start some type of counter procedure. From my visits (friendly visits) to my local court, most judges, while generally supportive of police, can be pretty hard on any cop that is either blatantly ignoring the law or is uninformed of the correct law.

>6. What is the ARRL's position on this?

ARRL has a pending FCC petition requesting the FCC to federally preempt ALL restrictive "scanner" laws as they might apply to any amateur radio licensee. Many others (including myself) have filed supporting statements to the ARRL petition AND have also asked the FCC to premept all "scanner laws" for everyone, not just hams.

>Are there any lawyers out there who could comment on this? or anyone from the
>ARRL?

I won't claim to provide THE official ARRL view, but I'm an ARRL member and an ARRL "Local Government Liason" in my region. I also was fairly active in the repeal of the NJ scanner law (brief and fleeting fame was so acorded when I and several others had our photo and story published in the April QST).

>Sorry if there is a FAQ for this, I obviously missed it.

If the Michigan police are in fact ignoring the Michigan law, then that is clearly beyond what any FAQ might routinely address. Actually, if anyone in Michigan has more knowledge of what might actually be happening, it would be good to hear about it and alert everyone as well as the ARRL Headquarters.

Note - All my comments are my Opinion and not to be construed as legal advice.

I took a look at the callbook mentioned above.

Can someone supply field names and max length for fields for this data.
(Assuming this is some "standard" data base dump.) Lots of fields have
"*"s (missing data).

Anyone know that date of this file?

Maybe someone can upload a recent callbook from the latest HAMCALL
CD-ROM?

>Yes, there is a lifetime membership option. It used to cost 15
>times the yearly rate (or was it 18).

Isn't there a problem with lifetime memberships/subscriptions to most
organizations in that it removes all incentive to get your address
correct? For instance, if National Geographic/NRA/ARRL happened to
screw up my address, I could simply cancel my subscription/membership.
They have a strong incentive to keep this information up to date.
With the lifetime subcription option, there is absolutely no benefit
to them to keep my address correct. I have already paid out all that
I am ever going to. In fact, it would be in their best interest to
lose track of me so that they no longer have to bear the expense of
sending out a monthly magazine. It could be argued that screwing up
one lifetime membership would discourage others from taking a lifetime
membership but how often do lifetime members ever communicate? Hardly
ever. It is next to impossible to find out if any lifetime members
have been screwed. Comments anyone?

660. Another Morse Code program for the Macintosh

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 21:33:35 UTC
From: phillips@pennsy.med.jhu.EDU
Message-ID: <9207151732.AA16290@pennsy.med.jhu.edu>

RE: WANTED: Morse code program for a MAC LC

> I do not know of any recent Morse programs for the Mac that can
> compete with SuperMorse and Morse Tutor for the PC. If anyone
> knows of one, please post its location/availability.

While I can't really compare to SuperMorse or Morse Tutor (I have never seen those programs) I know of another Morse Code Tutor program for the Mac. It is called MacSamuel, written by a Matthew A. Parker, NY3F, and marketed by Avant Systems, at P.O. Box 5437, Pittsburgh, PA 15206 (412/441-5391)

The version my wife (WO3N) received when she bought it about a year ago was 2.0. MacSamuel offers adjustable character speed and adjustable spacing speed, adjustable tone pitch (and the option for randomly chosen pitch), and adjustable session length. The program can send random words, groups of 5 random characters, or any TEXT file. It can also send simulated QSOs with randomly generated text and callsigns.

I don't remember ever having it crash or having any serious problems with the program, but I didn't use it all that much (I preferred to use W1AW fast code practice). The only quibbles I have about it are that you can't set which characters you want to be sent in the random character groups (you can only have it send random groups from one of 11 pre-established 4 or 5 character sets), and that the vocabulary for the random words and the random QSOs is too limited for extensive practice.

I hope this info is helpful. Good luck on the code!

--Mark, WO3M

Disclaimer: I am not in any way associated with Avant Systems or Matthew A. Parker other than the fact that my wife bought some software from them some months ago. This message shouldn't in any way be construed as a recommendation MacSamuel, rather it should only be construed as a posting to inform people about available Morse Code tutorial software for the Macintosh. Your mileage may vary. Flames should be sent to /dev/null. No, it's not a CB. Disclaimers are the result of there being too damn many lawyers in our society.

I've been very impressed by the League's willingness to continue to provide the services to me that it does to other members. I had no trouble at all when I moved several years ago, and if I had trouble moving again, my director would hear about it from me. (For those of you who know N5TC, you know that he'd do something about it, too.)

Methinks your concern is a bit paranoid. Remember that the ARRL is more than a magazine.

Not so Paul, if your check the law it required you to get an exemption from
your Police chief or Sheriff. Well, I marched on down to the local gendarmes
(who happens not to be in NJ, I might add) who was more than happy to write
me a personal note permitting me to do what is legal in Massachusetts...
when I was on the NJ turnpike and the officer asked, I handed him the note..
.. he took it... called it in or somthing...and brought it back saying it
was AOK..

He kinda looked P.O.ed though...73 de Luigi AA1AA

664. JULY 1992 CALLSIGN DATABASE AVAILIBILITY

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 23:00:57 UTC
From: flloyd@L1-A.West.Sun.COM
Message-ID: <l69bh9INNddg@west.west.sun.com>
Source record: 287447

NEWS FROM (THE ORIGINAL) CALLSIGN PROJECT

THE JULY 1992 CALLSIGN DATABASE IS ABOUT TO SHIP...

Yes, it's almost here. We're expecting the tape from the National Technical Information Service (NTIS) this Friday. As soon as Rusty (N7IKQ) receives it, he will convert it to the standard format and pass it onto me for duplication.

BUT....

Unless enough people express their interest, we'll have to cancel the project. Since the original posting went out over 3 months ago (yes, the government _is_ that slow...), we've received e-mail from the following individuals expressing interest in getting a copy:

benjy@benjy.cc.vt.edu
furr@pilot.njin.net
bowen@electra.cs.Buffalo.EDU
IANR003@UNLVM.UNL.EDU
phoenix.erc.clarkson.edu!rob
dan.pritchett@eng
John.Ackermann@daytonoh.ncr.com
mike@hernix.wariat.org
SKYLER.MAVD.HONEYWELL.COM!ESTEY
pzs@ficus.webo.dg.com
abeals@catnip.berkeley.ca.us
daveh@compnect.uucp
jpd@pc.usl.edu
cdp@hertz.njit.edu
julian@bongo.info.com
quintro!jrw@lll-winken.llnl.gov
brucec@tekgen.bv.tek.com
lopez!jcook@sharkey.cc.umich.edu
bt0l+@andrew.cmu.edu
Terry.Murphy@lambada.oit.unc.edu
pzs@ficus.webo.dg.com
70324.64@compuserve.com
dana@locus.com

Of these, exactly four (4) people have actually sent in their blank tapes and $20 checks.

Now here's the facts: our cost for the data is $350 (another party has offered to put up HALF the cost). At $20 a pop we need at least 18 orders just to BREAK EVEN on our half.

So here's what we've decided to do: Unless I receive at least 12 more
firm orders by Wednesday, July 22, the project will be cancelled and
those who have already contributed will have their tapes and money
returned, and the project will be officially _dead_.

Now I know that it's taken a long time to get the data, but I made this
fact perfectly clear when the first announcement went out. Now, the
data is about to arrive (actually it did arrive but had to be sent back...),
it's time to make your final decision as to whether you'd like to have
a copy.

So, once again, here's the offer:

****
Details/Info about The Summer of '92 CALLSIGN PROJECT

Rusty, N7IKQ and myself AA7BQ, are putting together a summer
distribution of the FCC callsign database. The database, which
is roughly a 50 Mb ASCII text file, will be distributed along
with some sample (shareware) UINX C source code to handle fast
indexing and retrieval.

Distribution Media, Formats, etc.:

The preferred distribution format is 1/4 inch cartridge tape, with
QIC-150 (DC6150) being the best. We also have 8mm Exabyte and can also
support QIC-24 (DC600A/60Mb) tapes, as well as 9-track reel-to-reel
tapes. Default data format is UNIX tar unless otherwise specified.
Other formats include 'dd', 'cpio' and (gasp) EBCIDIC 'dd'. No sample
source code will be available in the 'dd' formats.

* Absolutely no floppy disk copies will be made. *

Below is a sample entry for a single callsign from the data file
(there are in excess of 500,000 such records in the file):

KB0A|FORRETTE||CLAY|H|28321|87048|97048|RT 2 BOX 343|SIOUX FALLS|SD|
57103|3 MI SW OF|BRANDON|*|E|||*

Fields are separated by the | character, and are:

call|lastname|jr/sr|firstname|mi|dob|effective|expires|mail_street|
mail_city|mail_state|mail_zip|loc_street|loc_city|loc_state|class|
previous_call|prev_class|process_date

Missing fields are not applicable. Fields with * are the same as
corresponding field elsewhere: in the example above, the first *
means that the location state is the same as the mailing state.
Dates are in the mod(100) year plus julian days format.

Cost and Shipping:

The cost is $20 per copy. You must supply the recording media
along with a self addressed and prepaid mailing label.
Preferred shipping is via FED-X, UPS, and USPO in that order.

Proceeds will help cover the cost of obtaining the data from the
National Technical Information Service (NTIS) which currently
stands at over $700.

Ordering:

To receive a copy of the database, please send a 1/4 inch
cartridge tape (QIC-150 preferred), or Exabyte 8mm cart
in a prepaid and self-addressed return mailer along with
a check for $20 to:

Fred Lloyd, AA7BQ
8215 E. Wood Drive
Scottsdale, AZ 85260

Thanks,

-fred

665. Inexpensive, simple 12V SSB rig suggestions?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-15 23:41:14 UTC
From: zielke@FOZZIE.NRL.NAVY.MIL
Message-ID: <9207152341.AA04490@fozzie.nrl.navy.mil>
Source record: 287443

I am going offshore on a small sailboat within the next couple of weeks for a trip which will last about 5 weeks. I am looking for a 12V SSB rig which would run off of 12V. Primary use is emergency aid requests, but it would be nice to be able to access the maritime mobile net as well as ship to shore doctors and the like.

Any suggestions would be most appreciated! Either a suggestion of a rig which would be adaquate or someone with a spare rig around I could borrow for the trip would be helpful.

Thanks

668. PC Board Prototypes / PCB Layout Program

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 01:35:18 UTC
From: alanb@hpnmdla.sr.hp.com
Message-ID: <14570440@hpnmdla.sr.hp.com>
Source record: 287456

I FINALLY (after 2 months) received the PC board layout program from the guy in Utah who is starting a PC board prototyping service. Attached at the bottom of this posting is an abbreviated copy of the note he sent along with it.

I have tried the program out, and am favorably impressed. It does not have all the "bells and whistles" of the full-featured layout programs, but it does work, is easy to use, and not "buggy" (at least as far as I could tell after a couple hours of playing around with it.) It can handle up to 10-layer boards, with each layer displayed in a different color. (CGA/EGA/VGA display required). The basic objects are pads, lines, and text. To make an IC pattern, for example, you would build up a series of pads, "select" them into a collection and store the collection as a file, which can later be inserted into other layouts. Pads may be round, oval, rectangular or half-round (like a connector "finger"). There is an ASCII file that defines the pad types which you can edit to add pads of any sizes. Pads are automatically placed on all layers at once (or not, at your option).

A mouse is optional but highly recommended. The user interface is slick. When you poke the mouse button, a menu appears at the location of the graphics cursor. Move the mouse to highlight your selection, and let go. Or you can type the command on the keyboard using the first letter of each selection. Like "MDM" means Main-menu / Display-menu / Move-object. The function keys (3 sets of 10) can be defined as macros. You can use the (ASCII) macro file as provided or customize it to your taste.

Zig-zag traces can be drawn all at once, clicking the mouse on each node. A number of objects can be "selected" by drawing a box around them and "unselecting" any you don't want included. Once selected, the objects can be deleted, moved or "dragged" (all connecting traces are stretched so they still connect.) There is also a primitive auto-route capability: You mark the beginning and end of the desired trace, and the program tries to draw a connecting line without crossing any other objects. I say "primitive" because the line only makes right angles. However, it is automatically "selected" so you can immediately edit it.

Grid point spacing is settable, and you can have objects snap to the nearest grid point (default). You can zoom in or out by factors of 2. When the cursor hits the edge of the screen, the layout automatically pans in that direction.

The one thing missing is hard-copy plot-out. I think he just forgot to include the plot program, since it is mentioned in the manual. (It

works with either HP plotters or laser printers.) I plan to write him and find out. This is pretty important, because you can't really see exactly what the layout will look like on the computer screen.

At first look, I can't find anything seriously wrong with the program, and, assuming I get the hard-copy plot program, I don't see any essential features missing. I think it could probably be used for schematics as well, by building a library of symbols.

AL N1AL

********** Note that came with program **********
********** (Edited for brevity) **********

I am sorry that this information has taken so long before being mailed to you. The reason is that I wasn't ready to start building PCB's, even though I thought I was. One problem was that my drill table was not ready. I am ready now and should be able to return to you your PCB within two weeks after receiving your design. I have raised my prices to be a minimum of $15 or a $1.25 per square inch, whichever is greater.

My goal is to produce a low cost single quantity PCB in about two weeks. I can build a double sided printed circuit board that will have all of it's feed-thrus (vias) plated. The board will also be tin plated. ... our quality may not be as high as other PCB fabricators and my boards should be considered as prototypes and not a commercial product. The largest board size possible is 7 x 10 inches. ...

Trace widths should be greater than or equal to 15 mills and spacing between any two parts should be greater than or equal to 20 mills to ensure a good PCB, you can try smaller sizes but at your own risk. There is a discount for each additional PCB of the same design, I can also build large quantity orders but my main goal is the single (less than 5) boards. If you want smaller traces and spacing then you must supply your own negative.

If you choose to use my program then simply send me your design on a floppy disk along with a list of drill bit sizes for each pad size used on your design. Select drill bit sizes from the list on the order form in this letter. ...

If you do not choose to use my program then the biggest problem I have is knowing where to drill and what size to drill. You must provide on a disk file a drill table, I can use a N/C file and if you need more information on this format please write me. I also need a file for drawing your PCB design which can be a file for a HP 7575 plotter (2X plot, specify pen size, a list is on the order form) or a file for a laser printer (PCL format). ...

[Also available: gold-plated connectors, solder mask, and silk screening.]

We will try and return your printed circuit board within two weeks of when your check clears, this is not a guarantee and the turn around time depends on the work load. ...

Hi folks, if I make mistakes it's because I'm new to this type of environment. Sorry in advance...

My name is Mitch AC4IY and I am the prez of the University of Central Florida Amateur Radio Club. We have a Kenwood TS-700SP all-mode 2 meter rig here that is sick. I would appreciate it if anyone having a copy of the tech (shop) manual would contact me either by email or if local to Orlando, FL @ (407) 823-0035.

Thanx in advance es 73..
de AC4IY

670. Kenwood TH28A

Bill, I live in the GR area, and have just passed my Novice exam, but
haven't heard much on the subject, but please leave more detail about
Michigan, Since I am a michiganer.

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9).

Questions to beers@cs.buffalo.edu

ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
docket_91-36 - information regarding the proposed scanner regs
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_ham_123 - frequently asked questions about ham radio (parts 123)
faq_ham_456 - frequently asked questions about ham radio (parts 456)
faq_packet - frequently asked questions about packet radio
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
field_day_92 - field day rules for 1992
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
```

phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
repeater_map_proj - description of Electronic Repeater Mapping Project
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
usenet_purchases - tips on buying and selling via USENET

For readers of this newsgroup both new and experienced, these files are a de-facto "Required Reading List" to provide definitive answers and pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small PostScript graphics that you feel would enhance this collection are most welcome. Submit to Devon via his E-mail address above.

Additional archives out there that have /pub/ham-radio directories are encouraged to "mirror" these files to provide redundant storage for these documents.

For those without FTP access (and only those without FTP access, please), there is an FTP mail server at ftpmail@decwrl.dec.com (IP 16.1.0.1). Send the word "HELP" to this address for more information.

Additional documents on Usenet and other newsgroups may be obtained from pit-manager.mit.edu (IP 18.172.1.127) via anonymous FTP or via mail server (send the word "HELP" to mail-server@pit-manager.mit.edu).

Thanks to Devon Bowen, KA2NRC, for providing diskspace and maintaining these valuable archives, as well as all the authors who wrote and submitted the information contained in them. Devon will be on sabbatical during most of the summer. Andrew Beers, N2LUH, will serve as archive coordinator in his absence. His E-mail address is in the default Reply-To: header of this message.

677. Guide to the Personal Radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 05:58:24 UTC
From: pschleck@odin.unomaha.edu
Message-ID: <personal-radio-intro-1-711265967@unomaha.edu>
Source record: 287452
Cross-posted to: rec.radio.amateur.misc,news.answers

Posted-By: auto-faq script
Archive-name: personal-radio-intro

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, and rec.radio.swap newsgroups. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 3 June 1992.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began to dominate other topics in the group and on the list. This resulted in the logical solution: a group was created to hold the packet discussion, and another corresponding mailing list was created as well: net.ham-radio.packet and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great Renaming essentially unchanged, moving from net.ham-radio[.packet] to rec.ham-radio[.packet]. Readership and volume grew with the rest of the network.

The INFO-HAMS mailing list was originally run from a US Army computer at White Sands Missile Range, SIMTEL20. There were few problems with this arrangement, but one was that the system was not supposed to be used for commercial purposes. Since one of hams' favorite pastimes is swapping gear, it was natural for hams to post messages about equipment for sale to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use restriction, and after some argument, a group was created specifically for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn

reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the structure we now use.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.packet is for discussions related to (surprise!) packet radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgable folks in radio digital communications can be found here, and anything in the general area is welcome.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. The neverending no-code debate goes here, as does the New Jersey scanner law, the legality of ordering a pizza on the autopatch, what a bunch of rotten no-goodniks the local frequency coordinating body is, and so on.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both

rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.amateur.misc, .packet, and .policy groups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for details. You can also post to rec.radio.swap by sending email to rec-radio-swap@ucbvax.berkeley.edu; if you do it this way, be sure to include an address for responses by electronic mail, as the gateway does not automatically do so.

A Note on Crossposting
======================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

678. Apologies for Extra Elmers List this Month

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 06:07:11 UTC
From: pschleck@odin.unomaha.edu
Message-ID: <pschleck.711266831@odin>
Source record: 287457

Seems the machine that I use to post the Elmers List, Newsgroup Guide, and Archive Index to the net crashed *HARD* yesterday, requiring restoration from backups. As a result, all my automated job scheduling for the auto-posting scripts had to be restarted manually. Murphy was looking over my shoulder as I ran the wrong script and posted the wrong set of files. I couldn't undo it as the new Elmers list superseded the old one.

So, this month there will be an extra Elmers List. Watch for next month's edition at its regularly scheduled time, August 1st.

73, Paul W. Schleck, KD3FU

> a copy of it?
>
Michigan Compiled Laws 750.508. Try a regular library or a law
library.
My ham club -- the Radio Active Communications Club of S.E. Michigan --
also has copies of the law as well as a letter from MSP Col. Robinson which
we make available to others at some ham swaps. If you want a copy, send an
SASE to my P.O. Box address.

>2. Should one keep a copy of the law in one's vehicle to show to the
> officer when he stops you?
>
The best bet is to just not have the officer see the radio, although
you certainly don't want to look like you're hiding something if/when you
get stopped. Some of the bad-ass officers probably wouldn't even let you
pull out your copy of the law...

>3. If you are passing thru another state (on business, or to get to a
> vacation spot) is there such a thing as "free passage" so that the
> police can't confiscate your rig?
>
Hell no! But most states have laws allowing hams to carry 'scanners.'

>4. In states that have laws prohibiting radar detectors there are signs
> at the borders stating such. Are such signs required for scanners.
>
Nope, but in some cases --such as Michigan's old RADAR detector
prohibitive law, hams were excluded under MCL 750.508!

>5. What is the best way to handle being stopped?
>
If you mean being stopped with a scanner right there under the dash,
say something like "Iam an amateur radio operator. That is a radio
receiver." He/she might realize it is a scanner & start hassling you.

SImply advise them that you happen to carry a copy of the law which allows you to carry such a device, & ask him if you can show it to him. If he says no, cooperate with him, but ask him to ask his dispatcher to look up MCL 750.508, then offer to show him/her your ham license.

I feel safe in saying that MOST police are unfamiliar with MCL 750.508, & unless they recognize you as a public safety officer, there first thought is to think that you're a criminal who has the scanner to avoid capture. If you convince them that isn't the case, they'll still think you're some sort of ambulance-chaser or cop-wannabe.
If they confiscate your radio, cooperate with them, but go into the station during business hours, demand to speak with a senior command officer, show them MCL 750.508, ask them if they know what it means, & then file a civil complaint against the officer/department.

"Ignorance of the law is no excuse" can & should work both ways.

Y'know I got a supplement to my National Geographic Atlas the other day.
It showed four yes four new countries that declared independance from
Yugoslavia.

Slovinia Jun 25, 1991
Croatia Jun 25, 1991
Macedonia Nov 17, 1991
Bosnia & Herzegovina Mar 3, 1992

The ITU is issuing these new countries new prefixes.

Would someone please wake up the DXAC.

For the record, we DO subcribe to IEEE transactions at League headquarters.
The particular issue I was looking for was missing from our files.

In addition, my interest in the article was PERSONAL, not League-related.
A computer check of *public* libraries in Connecticut did not turn up
a source for these transactions. Yes, I could have called the IEEE
directly, but I was lazy and opted to use Internet first.

Condem MY ignorance and laziness if you wish, but please take care when
you choose to paint the rest of the organization with the same brush.

Steve, WB8IMY

>to them to keep my address correct. I have already paid out all that
>I am ever going to. In fact, it would be in their best interest to
>lose track of me so that they no longer have to bear the expense of
>sending out a monthly magazine. ....

doing this deliberately would be fraud. actually, i bet the incentive is to have lots of lifetimers because there's overhead in knowing when a sub runs out (for example, they have to send renewal notices, a drop in subscribers affects print runs, etc.). Having a base of "permanent" subscribers lets you plan a bit easier (and the only problem there is knowing when someone kicks off).

since you paid the bucks, it's in YOUR interest to keep them apprised of YOUR address. They aren't mind readers.

and i think a lifetime sub to Worldradio is still like $65-$70 or so.

Obviously, a lifetime sub is in the best interest of someone say 20 to 40 years old so they will be protected against future price increases. worked for me. (both ARRL and Worldradio shortly after graduating and when some bucks started to come in). I wish I would have gotten on board the 73 lifetime sub back when (but i didn't have any money then anyway).

Just for the record, I was not the one who originally posted the "briar patch" comment. I may have done a follow-up, but my email gets so busy that I really don't remember. :-). I'm still a bit young to be a true Gasping Geezer, but I am in apprenticeship under Jim Kearman. :-) (He'll get me for that!)

> Does that make him "Hare Rabbit"? (bah-dump)

Groan. Keep in mind that I have been hearing "Hare" jokes since I was a wee lad (the prelude to Gasping Geezerhood). I only laugh at new ones.

>deleteions

> It's called the QCWG (Quarter Century Wireless Geezers) Association.

> You're not gonna like the initiation - we use the WolffHong....

Tony. Does this mean that you know that specific method of the application of punishment with the Wouff Hong? Over the years, this secret has become lost to us. As tours come through Headquarters I have heard many different suggestions -- ie the cracking of the knuckes between the two sections, and a few, uhhhh, let's say -- a bit more colorful -- and let it go at that. :-).

73 to all and keep the encouragment and flames coming our way. Both are important to our morale and the things we need to get done. Ed

>

I do operate this FTP server.
Yes, the files are there. Just to tell you hungry fellows -
this data is old !

The data is at least 1.5 years old, so don't
expect the addresses to be correct.

The data has been bought from the FCC by the guys operating the
well known internet callbook servers at the time (for real money!)
Please support them if you want to see _free_for_all_ updated data in
the future !

Contact Devon Bowen, KA2NRC - bowen@cs.buffalo.edu - if you want
to support the project or you'd like to get the updated data yourself.

I am going to remove the files from the server, because I have never
been authorized to distribute these files!

73, Frank

686. receiving Italy from Germany

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 13:18:15 UTC
From: braun@valeska.fmi.uni-passau.de
Message-ID: <1992Jul16.131815.22993@tom.rz.uni-passau.de>
Source record: 287469

Hi everybody ...

i've got i technic problem and perhaps there's somebody out there able to
answer my question :

I've recently bought a world-receiver which should be able to receive a lot
of radio stations worldwide. It seems to be a quality device because it's
produced by Siemens. Unfortunately i've so far failed to reach my aim for which
i've bought it :
I want to listen to the italian radio in order to increase my
knowledge of italian - but unfortunately i simply don't manage
to catch ANY italian radio station.
My geographical position is Bavaria which is situated at the southern
border of Germany and really isn't that far away from Italy ...
my personal suspicion is that indeed i'm TO NEAR and that the Alps
(for non-europeans : a huge mountian chain) are blocking the radio waves.
Well perhaps this makes you experts laugh - but i've no detailed knowledge of
radio transmission , i'd just like to listen to the italian radio while being
in Germany.
Has anybody out there an idea what's wrong and how i could solve my problem ?
Don't hesitate to suppose that i could have made some terribly naive error
which so far has prevented the whole thing from working (yes i've bought the
correct type of batteries).

Thank you in advance !!!!

>the states were within their rights. Is this not the case?

No, they looked at the issue and decided there wasn't a convincing
enough case to step in with a preemptory ruling. That's sort of a
"we reserve the right to do something later" action rather than an
endorsment of the state law.

-Ron

>Yes, there is a lifetime membership option. It used to cost 15
>times the yearly rate (or was it 18).

When I sprung for life membership, it was 20 times the yearly rate of $12, $240. I went for it because it seemed like a good deal (for me, not the League) because I had a keen interest in ham radio and I was 14 years old. Needless to say, it has already paid for itself and it is now a bad deal for the League. They also let me pay for it in $30 installmanets stretched out over a year or two.

I think the original life memberships were offered at $100. The last time I checked, they were asking 25 times the yearly rate of $24, which is quite a bit of money. I bet it's really expensive now.

689. Mods for Yeasu FT-411E???

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 13:56:46 UTC
From: acm139@ccs.northeastern.edu
Message-ID: <1992Jul16.135646.29011@random.ccs.northeastern.edu>
Source record: 287473

I have had my FT-411E for over a year now (think it's been two years now),
and have tried only one mod on it which proved unsuccessful.
(It was the one to receive aircraft, but proved not to work on mine).
ARE THERE ANY MODS FOR THIS RADIO (besides the softmod of turning off the
radio, holding down the up/down arrow keys, and turning back on)?

If it helps any, the serial number of mine is: 1D351085
If anyone had performed a successful mod, please e-mail me (especially if
your serial number is anywhere close to mine.

I think the ciruit layout of mine must have been changed between the times
when the mods for the original FT-411 came out, and when the 411 was updated
to the 411E (the 'E', for those who don't know and may be curious, means the
tone-encode option is built-in to the HT, rather than being an option (as it
is in the 411)).

Also, for those who don't know (and may not care anyway), this HT is a 2m
rig.

73 to all, and look forward to any help you can give.

Remember, older mods probably won't work on mine. The only one I tried
(only one I could find) was the hardware mod of changing the internal
solder jumper settings, which, as I stated above, failed on me.
(My consequence for performing that mod is an ever-present 'low-battery
indicator' which always flashes (even when I connect my HT to my DC adapter
and run the rig off my Regulated 12v DC power suppy)y
(oh, well :( ).

If it helps any, I'll give my few comments:

I'm a VE. I have not polled anyone as to how they learned the code,
though I've heard many stories from applicants who have used either or both
methods (computer and/or tape).

My personal feeling is to envoke the best method(s) which suite the
individual learning the code. I used both methods myself interchangeably,
and learned the code.

It all depends on the individual, and what equipment they have available
to them.

>because he wants to be but because he has a medical problem and can't hear
>tones.

Well, if your friend doesn't want to learn code that is fine with
him, but the claim that he cannot hear tones is pretty bogus sounding.

I knew a fellow who was nearly completely deaf. He could only hear
a few select frequencies. The tones of CW could fit through if he
tuned to the right tones.

Are you telling me your friend is totally deaf? Or are you claiming
he can hear speech that spreads out over 100 Hz to 3000 Hz but cannot
find a frequency in there where a tone could be heard?

Remember, he doesn't have to listen to CW at exactly 750 Hz all
the time, different pitches are availiable.

Of course, some find it interesting to key a white noise source and
copy CW from that. It is quite copyable, and an interesting diversion.
```

at all, he could hear that.

those who are totally deaf, the CW test has been passed by feeling
the tones on a speaker on the skin. (Yes, it is apparently quite legal
that way, and has been so for decades.)

Again, if he doesn't want to learn code, fine. That is the idea of
the no-code license. However, his excuses sound pretty lame.

Alan

Alan, sounds to me that you have an attitude problem trying say that this
person you mentioned above has "LAME" ideas for not learning Morse Code.

This guy is approaching 70, has suffered a stroke a few years ago and
CANNOT hold his memory due to the stroke. It is even more debilitating
to him that he is tone deaf. But I can say this, it is "FARTS" like you
who write these private flames and makes the amateur community suffer.
I do have a suggestion, read the intent of the Amateur Service again, you
might find that the Amateur service is a "Public Service". That guy helps
more people on 2 meters than you probably have for the span of your increpid
life. I truly feel you must be one of those old "Farts" who try to own
frequencies. What are you anyway, a 5 WPM Code Technician??? But not to
worry, if I hear you on frequency, I will ignore you, just like I told
Cheryl to do earlier. Now Alan, please stick it with your unthought ideas...

>have been screwed. Comments anyone?

Just because you're paranoid, doesn't mean we're not out to get you!
Good grief, Conway! You're responsible for telling us if you move.
We're not a detective agency, after all. If you are moving, go to
your post office and get a change of address card. Copy your
name and address as they appear on a mailing label, if possible.
This makes our sadistic (only kidding, Deb) Circulation Dept's
job easier, but do the best you can. Mail us the card, and we'll
change your address.

I recently changed my address. All my Life memberships (including
two of the three you mentioned) followed me, after I sent said
forms. Sheesh... 73.

701. Is it "business" if I use an autopatch to...

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 15:16:08 UTC
From: djenkins@wang.com
Message-ID: <brhmez.ahd@wang.com>
Source record: 287280

Would it be considered "business" if I were to use an autopatch to call a fellow HAM at work to discuss non-business matters? I can just see someone bringing down the patch on me when they heard the receptionist answer with a company name even though the nature and spirit of the impending conversation would further NOONE's business interests.

What about making a long distance call on the autopatch? In this case the nature and spirit of the conversation also further noone's business interests. BUT, the act of establishing the communications is DIRECTLY furthering the business interests of the phone company.

I have a few questions:

1) is is normal for this radio to get REAL hot when TX'ing?
2) why does the ON AIR light flash sometimes, and necessitate resetting of
the radio?
3) is there a chip you can buy to add more memories?

Thanks!

73, -jon

NEW ITEM ANNOUNCEMENT

Radio Shack announces the PRO-43, 200-Channel Portable Scanner
with HyperScan. This is the first-ever Realistic handheld scanner
that features a triple-conversion superheterodyne circuit that
eliminates cellular image problems on 800 MHz, and also improves
image rejection across the entire reception band.

The scanner also features:

|-| Access to over 48,000 frequencies including 200-400 MHz
military aircraft and 800-MHz public safety bands

|-| HyperScan system scans at 25 frequencies per second
and searches at 50 frequencies per second

|-| Ten storage banks allow grouping and selection of
channels by frequency or by type of service

|-| Automatic and manual AM/FM mode selection

|-| Monitor bank |-| Memory saver |-| Priority channel

|-| Lockout function |-| Multifunction liquid-crystal display

|-| Operates on 6 'AA' or rechargeable batteries,
AC adapter, or DC adapter

Coverage: 30 - 50 MHz (in 5 kHz steps)
118 - 136.975 MHz (in 25 kHz steps)
137 - 174 MHz (in 5 kHz steps)
220 - 225 MHz (in 5 kHz steps)
225.0125 - 400 MHz (in 12.5 kHz steps)
400.0125 - 512 MHz (in 12.5 kHz steps)
806 - 823.9375 Mhz (in 12.5 kHz steps)
851 - 868.9375 MHz (in 12.5 kHz steps)
896 - 999.9875 MHz (in 12.5 kHz steps)

FM Sensitivity (20 dB S/N at 3 kHz deviation): 1 uV
AM Sensitivity (20 dB S/N at 60% modulation): 2 uV
Spurious Response Rejection (at 328 MHz FM except primary image): 40 dB
Selectivity: +/- 10 kHz: -6 dB
+/- 20 kHz: -50 dB
IF Frequencies 1st: 608.005 - 611.2 MHz
2nd: 48.5 MHz
3rd: 455 kHz
Audio Power: 250 mW
Dimensions: 5 3/4 x 2 3/4 x 1 5/8 Inches

Weight: About 8.8 oz without antenna or batteries

> screw up my address,

First of all you are considering a membership in the League as a magazine subscription. It's a membership in the national amateur radio organization..the magazine just happens to come with it.

Second, they only change the address when you tell them so it's really up to you, not them to do the informing. Personal history with same. I moved to Santa Barbara from LA and didn't get around to telling them for 4-5 months. I told them by finally making a phone call. The gal looked on her records and said yes indeed the past issues had been returned from my previous address, i.e. they bounced. I asked her how long it would take to get the address correction in and she said something like 2 months. I let drop that I was a life member and wondered if they could do any better than that. Well, I can't tell you how long it took to get the regular flow of magazines going again, but they did mail me ALL of the back issues in one bundle!

Every time I've ever called the league about ANYTHING that I needed I've always found the staff and Newington to be sympathetic and as helpful as they could be. I think it was money well spent.

>What about making a long distance call on the autopatch? In this case
>the nature and spirit of the conversation also further noone's business
>interests. BUT, the act of establishing the communications is DIRECTLY
>furthering the business interests of the phone company.

One of the reasons for the "no-business" rule is to keep people from
avoiding long-distance charges via ham radio. The feeling is that
the phone company would get upset if their revenue was eroding due
to ham radio phone patches (typically coast-to-coast HF patches).
But if you are using their long distance service (and presumably
someone is paying for it), that becomes a non-issue.

The other thing has to do with, for example, someone paid you
five bucks to make a phone patch for them, which is not what you
described either.

Now if you made an autopatch to the guy's office who dumped you
and asked him to explain the reasons over the phone patch why
he dumped you..... would you go back in time?

I am looking for textual information on getting started in satellite communications. The ARRL satellite handbook is now several years old - is an update on the way or is it not necessary? What is going to be special about the new "Phase-D" birds? Should I plan my station around them, or around the older birds the RS-10/11, 12/13 series and Oscar-13? I want to be somewhat current when I get on the "birds" - not "Oh, nobody is on that satellite anymore - they have all moved to . . . because that is where the new stuff is". What is a passable two meter all mode rig that I can use for uplinking? What is the best 432 convertor to feed into my TS-440S? What is the best 432 antenna mounted preamp to use? What is a capable TNC for satellite work (and I assume with a 9600 Baud PSK modem)? Where in the frequency spectrum do I find PACSAT and are there "bulletins" from space? I am familiar with HF and VHF digital modes. Any takers?
Thanks.

My club (Cochise Co Arizona) set up in a city park with our 2 1/2 ton surplus military van and made quite a few contacts using the club call WA7KYT. The highlight for me though was when an 8 yr old son of one of our members was playing with his radio controlled model car, running it 50 yard or so away from our site. A pair of nesting road runners came out to fight the little truck which was about their size, confronting it with fluffed up feathers like a peacock. They kept trying to lead it away from some hidden nest. (guess you had to be there, it was funnier to watch than to describe)

GLB is very much still in business. They advertise frequently in commercial
and amateur publications. They are usually promoting there preselectors or
their ID units. You should have no problem getting schematics or support
from them directly.

I think buckmaster might be a little upset witht somthing like that..
There are getting picker and picker on the CD-ROM copyright.
Orginally it was just copyrighted, now they list not for profit
what next only for single user use? I am also not sure how they can
include several program with the CD-ROM database that explictly
prohibit selling of the software for more than x. and X is less than
the CD cost..

I saw the ftp site with the us call database online. It looks
like they have taken the buckmaster database and did a split(1)
on it.

your mileage may vary.,.

ormsby@ohstpy.mps.ohio-state.edu writes:

> I have just bought a rig to get on 6m SSB. Can anyone give me
>some tips on working sporadic E? Thanks in advance.

I worked quite a lot of sporatic E SSB from my car last month.
My contacts were limited to the Seattle area, Arizona, and northern
Mexico. I had only a 10-watt Icom-726 with a whip antenna.
You are better off if you have a beam. The popular frequencies
were from 50.1 to 50.3, with 50.125 as the most popular. The openings
were in the afternoon and early evening.

Es occurs most often around the time of the summer solstice,
June 21. The week before and the week following are usually
the best times. There is another mini-peak around the
time of the winter solstice, Dec. 21. Es can occur at
any time, however, so the best thing to do is keep listening,
call CQ once in awhile, and be patient. Patience is a virtue
on 6m.

I thought I'd make my QSO generation program available. It must be
used with a Morse generator such as sparc-morse, Morse Mania, etc.
Here`s the readme.

-- paul drongowski pjd@siemens.siemens.com

****

Author: Paul J. Drongowski / N2OQT
Address: 1 Allen Court
Plainsboro, New Jersey 08536
Date: 10 October 1991
Copyright (c) 1991 Paul J. Drongowski

When run, this program generates a single QSO. The form of the
QSO is similar to messages one would expect to hear at a code test.
It begins with a series of V's, callsigns of the receiver and
sender, followed by a few sentences about weather, name,
occupation, etc. The QSO ends with the callsigns of the receiver
and sender. Here is a sample QSO.

```
VVV VVV
N1AL de KD4AUS
Tnx for ur call.
Your RST is 555=555.
I work as a physicist.
This is Margaret.
My age is 25.
I have been licensed 11 years as Novice class.
My rig runs 100 watts into a parasitic beam up 20 feet.
My QTH is Trenton, Wisconsin.
Weather here is partly cloudy.
Temperature is 35.
+ @
N1AL de KD4AUS
```

All output is produced using "printf." This should make the
program easy to port. Output can be piped into another program
such as sparc-morse on the Sun or it can be redirected into
a file (without viewing the contents of course!)

The program design is similar to a "random poetry generator"
or "mad-libs." Each QSO form is generated by its own C function,
such as "PutForm1." Each function calls other C functions to
produce the sentences in the QSO. The sentence forms are
selected somewhat randomly as well as any blanks to be filled.

Words and phrases are selected from several lists such as "Transceiver," "Antenna," "Job," etc. Sometimes this scheme is clever as in the formation of city names. Sometimes it is stupidly simple-minded and grammatical agreement is lost. By the way, the callsigns are real and were picked from rec.radio.amateur.misc on USENET.

The program was constructed in C for Sun workstations. It uses the library function "drand48" in function "Roll" to produce pseudo-random numbers. The library function "srand48" and "time" in "main" are used to set the pseudo-random number seed.

Known problems and caveats? Hey, it`s software! All Morse training programs handle the procedural signs (e.g., AR, SK) differently. The function "PutQSO" currently prints "+ @" for the AR and SK at the end of the QSO. These may be ignored, mapped into something else, or just plain cause your training program to roll over and play dead. I don`t know. This is a cheap hack.

And speaking of cheap... Please note that I retain the copyright to this program. You may use it for any non-commercial purposes. This is roughly equivalent to "fair use." [Flames about legal matters to /dev/null.] Please feel free to upload the source to any and all bboards, info services, flagpoles, etc.

Always have fun!

The Atlanta Hamfest is July 18-19 at the Georgia International Convention
and Trade Center. Times are Saturday from 9 am to 5 pm. Sunday 9 am to 2 pm.

Parking is at the airport Mariott. There's a free shuttle to the hamfest
site.

Talk-in is on 146.82(.22), 145.35(4.75) and 444.825(9.825) from 4pm to
10pm Friday, 6am to 6pm Saturday, and 6am to 5pm Sunday.

Admission is $8 at the door. There will be a tailgate area with admission
of $15 at the door. Flea market tables are $25. I believe most all the
flea market tables are sold.

For more information, you can call the hamfest hotline at (404) 739-8716.

See you there!

Easier to implement, and more reliable too. Voice would require either a tape (unreliable) or some form of digital storage (expensive, esp. when the system was first established). Morse is easy, cheap, and reliable for an automated beacon.

I've been thinking about some of the things you've said, and have a few more comments here..... this whole bit really bugs me.... there is no excuse, period, for people behaving that way --- it is NOT what Amateur Radio is all about.

In article <1992Jul13.002641.1@cc.utah.edu> cberthel@cc.utah.edu writes:

>Probably the most intimidating thing
>about the idea of going on the air with Morse instead of VOICE is the
>rude "old farts" out there that won't give a new ham the time of day.

QUESTION: are they not giving you the time of day because you're a new ham? or is it because you don't have the 5 wpm code? it's wrong either way (very wrong), but I can't even begin to imagine *ANY* ham (even those who can't handle the idea of a no-code license) not being willing to help out a new ham....that just goes against the grain.

also, I mentioned this yesterday, but it deserves repeating.... you'll find that these types are ***MUCH*** more common in the phone portion of the bands. seems the people who rag on others for not knowing the code don't seem to use it themselves (at least, from what I've seen). when I was starting out with cw, and (due to not having used it for a year, and the resulting lack of confidence) was really shakey even at 5 wpm, did anyone I worked give me a hard time? no. all I got was a gentle reminder at times that it's ok to ask them to slow down if I need to. btw, this was before there was such a thing as a no-code license.

before any of this happened, one of the local hams in San Antonio (where I grew up) heard about this technician (me) who wanted to upgrade to general, but didn't have a rig to get on the air with and work on his code speed....he was genuinely p*ssed off (that nobody had helped me out already with either building one or getting an old rig on a college student's budget), and set out to find a rig for me. before the day was over, I had a rig up and running --- cost me 25 cents (so he could tell his wife: ``yes dear, I *sold* it''). it was an old rig, but it still worked on 20m, 40m, and 75/80m.

this rig has now been passed along to another new ham who wants to get his code speed up (I'm not sure if he's a no-code tech or just a plain old tech)....cost him (you guessed it) 25 cents.

THAT is how it is supposed to work.

>I've read months of arguing over the code versus no-code issue. Seems
>to me that this is territorial issue rather than a technical one.

there is a good reason I know of why code is still important (note that I didn't say fun --- I love cw): bad band conditions. if band conditions are lousy, cw is still the most efficient in terms of power distribution per unit frequency, as it is a pure, unmodulated carrier. this means that it still penetrates through the noise better than other modes. when band conditions are really marginal, you'll often find folks (like me) who'll switch to cw to finish off the QSO after the voice signal is ancient history. this can be really important during disaster communications, too......

>The
>"old farts" were on the playground first and don't want newcomers to
>come in and use the swings because then they'll have to share.

yes, that is generally the real reason why people (at least, people I've talked to) are anti-no-code. they're concerned about ``keeping the standard high'' or something, and don't realize what a black eye their attitude gives the hobby.

>Too bad the FCC or ARRL
>didn't outlaw rudeness when they did profanity and idecency! Too bad
>a Extra class *LID* can't be demoted to no-HF tech status for being
>abusive on the ham bands.

at least in the cases of the lids I've heard, their language was far from clean....they used just about every word in the book. scratch ``just about'' --- they even created words that aren't in the book. they also were so arrogant that they didn't mind at all giving their callsigns, since they were sure that even if the FCC was listening that they wouldn't get as much as a slap on the wrist. sadly enough, they were probably right.

what needs to happen is for something to be done to enforce the regs. granted, the FCC can't be everywhere, but there should be a well established, documented, published procedure (or is there?) for going about contacting the FCC and getting serious action taken. I'm not suggesting that this be setup for every time someone slips a word in here and there that they didn't mean to --- I'm talking about the lids who make a point of it. you all know the type.

from a very irritated ham, licensed since '88, who can't imagine how someone calling themselves an Amateur Radio Operator can behave so shabbily to another ham.....

By "SSB rig" I assume you mean a ham rig, rather than a "Marine SSB" radio, since you have a call sign and you mention the Pacific Maritime Net, which is on the ham frequencies (normally 14313, occasionally 14300 if there's QRM on 14313). With a ham rig you could do all the things you mention easily; you could also use the marine SSB, but it requires "programming" the frequencies (if you haven't already), which is less convenient. And the marine SSB radios (like the ICOM 600, 700 and 800) tend to be more expensive.

I've used an ICOM 735 for marine use successfully for years, and among other long-distance voyagers it seems to be the favorite; at least I see 735s more often than any other rig. Most of my students (who tend to be boaters) have also opted for the 735. If you want something cheaper, you could also consider the ICOM 725.

Both work fine with a boat's 12v system, although the 735 won't transmit if your batteries are too weak (i.e., if the voltage under load drops below 10 or 11 v). And if you want it only for the boat, you avoid having to buy the power supply!

You'll need an antenna tuner, of course, either a manual one (like an MFJ) or (better) the ICOM AH-2A (without the whip). For an antenna, you can hoist a wire with a spare halyard when you're ready to operate, or if the boat has an insulated backstay (better) you can of course use that.

Good luck; call me if you want to chat.

726. ALERT: Major Solar Flare Alert

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-16 19:13:18 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.711313998@honte>
Source record: 287295
Cross-posted to: sci.astro,rec.radio.amateur.misc,rec.radio.shortwave

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 19:00 UT, 16 JULY

/\

No Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 16 July)

Flare Size: Class M6.8/1B
Location: S09W60 (Region 7220/7222 - see below)
Tenflare: 710 sfu at 16:55 UT, Duration: 6 minutes
Peak Radio: 710 sfu at 2,695 MHz
SESC Times: Begin=16/1653 UT, Peak=16/1659 UT, End=16/1703 UT
(SESC Times are based on a half-power-point system)
Sweeps: Type II (Importance 1) at 17:02 UT, Duration: 4 minutes
No Type IV reported.

PRELIMINARY X-RAY TIME PROFILE DATA AND ESTIMATED STATISTICS:

BEGIN (XRAY) MAX (XRAY) END (XRAY) DURATION INTEG. FLUX SWF DUR.
------------ ----------- ----------- -------- ----------- --------
1653 (B8.9) 1659 (M6.8) 1707 (C9.3) 014 MIN. 0.026 J/m^2 011 min

NOTE: The xray time profile data above is not based on the half-power-point system, but is intended to give a general idea of the duration of the entire event, from the start to the end when xrays fall below M-class levels. Integrated x-ray flux covers the interval from start to end.

SYNOPSIS:

This major flare was very impulsive in x-rays and had a signature similar to the previous major flares which erupted out of Region 7220 on 08 and 09 July. Consult the x-ray plot of the major flare available through anonymous FTP at: xi.uleth.ca (IP number 142.66.3.29) in the "pub/solar/Xrays" directory under the filename "920716x2.gif".

This event was associated with a fairly weak Type II sweep of short duration (about 4 minutes). The importance was rated as 1 to 2 by various stations.

The location of this flare was in the 7220/7222 spot complex. It appears to have been centered near the leader portion of Region 7222, but may

have been shared by both Regions 7220 and 7222 (observations are still preliminary).

A short wave fadeout has been confirmed. The SWF was fairly strong during the maximum phase of the flare, but was short lived and affected frequencies at least as high as 15 - 20 MHz for only several minutes.

Overall, this was not a very significant major flare and is not expected to have any substantial adverse geophysical impacts.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for terrestrial impacts in various categories.

```
---------------------------------
POTENTIAL MAGNITUDE OF DISTURBANCE
---------------------------------

Message-ID: <1992Jul16.193332.27914@cbfsb.cb.att.com>
Source record: 287292

Are there any metals experts out there?

For constructing yagi antennas, I usually see only two types of
aluminum tubing mentioned:

6061 - T6
6063 - T832

What is it about these two types such that I never see other grades
mentioned? Does anyone have any strength or other relevant statistics
re: aluminum tubing grades?

Wayne Strahl - W9II wstrahl@cbnewsg.att.com

>I think buckmaster might be a little upset witht somthing like that..
>[taking the callbook from the latest HAMCALL CD-ROM]

Why would they get upset? The information is in the public domain.
Just because they copyright the CD doesn't take the callbook out of
public domain.

>There are getting picker and picker on the CD-ROM copyright.
>Orginally it was just copyrighted, now they list not for profit
>what next only for single user use?

Could it be simply hot air? I am told that the shrinkwrap "license"
is not legally enforceable since the licensee never signed anything.

>I am also not sure how they can
>include several program with the CD-ROM database that explictly
>prohibit selling of the software for more than x. and X is less than
>the CD cost..

Could it be that Buckmaster is gambling that the individual authors do
not have the financial ability to sue?

>The VSWR steadily improved with frequency. Is the cutting chart right?
>Maybe not. The real part of the impedance is close to 50 ohms near the band
>center but there is a significant imaginary component.
>

I have noticed the same problem with Larsen's cutting chart. Recently I
cut both a 146 and 220 1/4 wave whip using Larsen's chart. Later I
measured the SWR using a Radium Shack VHF/UHF meter and discovered they
were too short in the same manner as Wayne did. So I cut new rods that
were 1 inch longer and things looked much better. Larsen's chart seems
to be aligned with standard antenna length formulas such as 468/F(Mhz)
and the antennas I ended up with that matched best were too long by the
formula. I speculate there is some inductive reactance being cancelled
by the capacitance added from the extra length but I don't know why.
I have not observed this effect with non-Larsen 1/4 antennas as far as
I can remember, which isn't very far. I am also using NMO mounts with
holes cut into the roof of my cars. Don't be afraid to cut holes in
your new 1993 RX-7, just do it! You can always put a plastic plug in
when you sell it. Larsen sells these plugs as well as a neat hole
cutting bit for NMO and other mounts.

You can't waiver the 5 WPM test. The examiners however are allowed
a lot of leeway (to the point of absurdity) in giving a code test
to a handicapped applicant. You should contact a knowlegable local
VE team, Handihams, or the league.

============================================================

ZCZC AP36
QST de W1AW
Propagation Forecast Bulletin 28 ARLP028
>From Tad Cook, KT7H, Seattle, WA
July 10, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB PROP ARL APDP028
ARLP028 Propagation de KT7H

Solar activity picked up a bit last week. The flux has been low for
some time now, but the rate of decrease in activity has lessened
recently, at least temporarily. Solar flux reached a peak of 154.7
on July 7, the highest it has been since it was 160.9 on April 24.

The only days with any disturbances were July 2 and 5. K indices of
4 and 5 were the norm for July 2, and the K index briefly went to 4
at 0600 UTC on July 5. Otherwise an ideal situation of higher solar
flux and very low K values prevailed, with many periods of 1 or
less.

There was a moderate shortwave fade on July 8 caused by a flare from
region 7220. There is a possibility of more activity from this
region by the time this bulletin is broadcast. Solar flux should
gradually decline over the month to near 110 around July 23 and 24,
then rising again toward early August. There is some probability of
disturbed geomagnetic conditions from July 13 to 16, and again from
July 27 to 30.

The higher solar activity makes propagation on frequencies as high
as 15 meters better again, but the best bands for worldwide
propagation remain 17, 20 and 30 meters.

Sunspot Numbers from July 2 through 8 were 84, 83, 87, 102, 133, 130
and 131, with a mean of 93.8. 10.7 cm solar flux for the same
period was 136.6, 136.5, 136.7, 145.7, 150.4, 154.7 and 151.5, with
a mean of 144.5.

Wondering....does anyone else out there use their little QRP rig with a lighter plug and a mobile whip on HF? I have had amazing success with a ham stick whip (as simple and cheap as they come) matched with a little capacitor running to my barefoot Argonaut. When conditions are not good, no one hears me, but when conditions are reasonable, I am heard across the country on 40 meters SSB.

Even with 20 years of QRP experience behind me, I was surprised at my success in the mobile. Anyone else have such experiences?

Source record: 287305

The reviews seem to indicate that the Trimble models are the leaders at the moment; and they do an incredible job, all right. A less expensive alternative is the Interphase StarPilot, which uses the Trimble engine, but without all the bells and whistles, and still has nice graphics. There are also several inexpensive hand-held models, the best of which is the Magellan. The new model is the 5000, which has 5 channels for quicker and more accurate fixes.

Most will interface with other equipment using NMEA 0183 (I think that's the right number; the info is at home and I'm at work!)

Practical Sailor has had some good reviews and overviews in the last year or two.

Some of the good units are now available for as little as $1300; others, not so good, are available for less than $1000.

If you want more specifics, I have the Interphase and the Magellan, and can always check the manuals.

|_____________________________________________________________________|
```

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

Chart Start Date: Day #138

NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

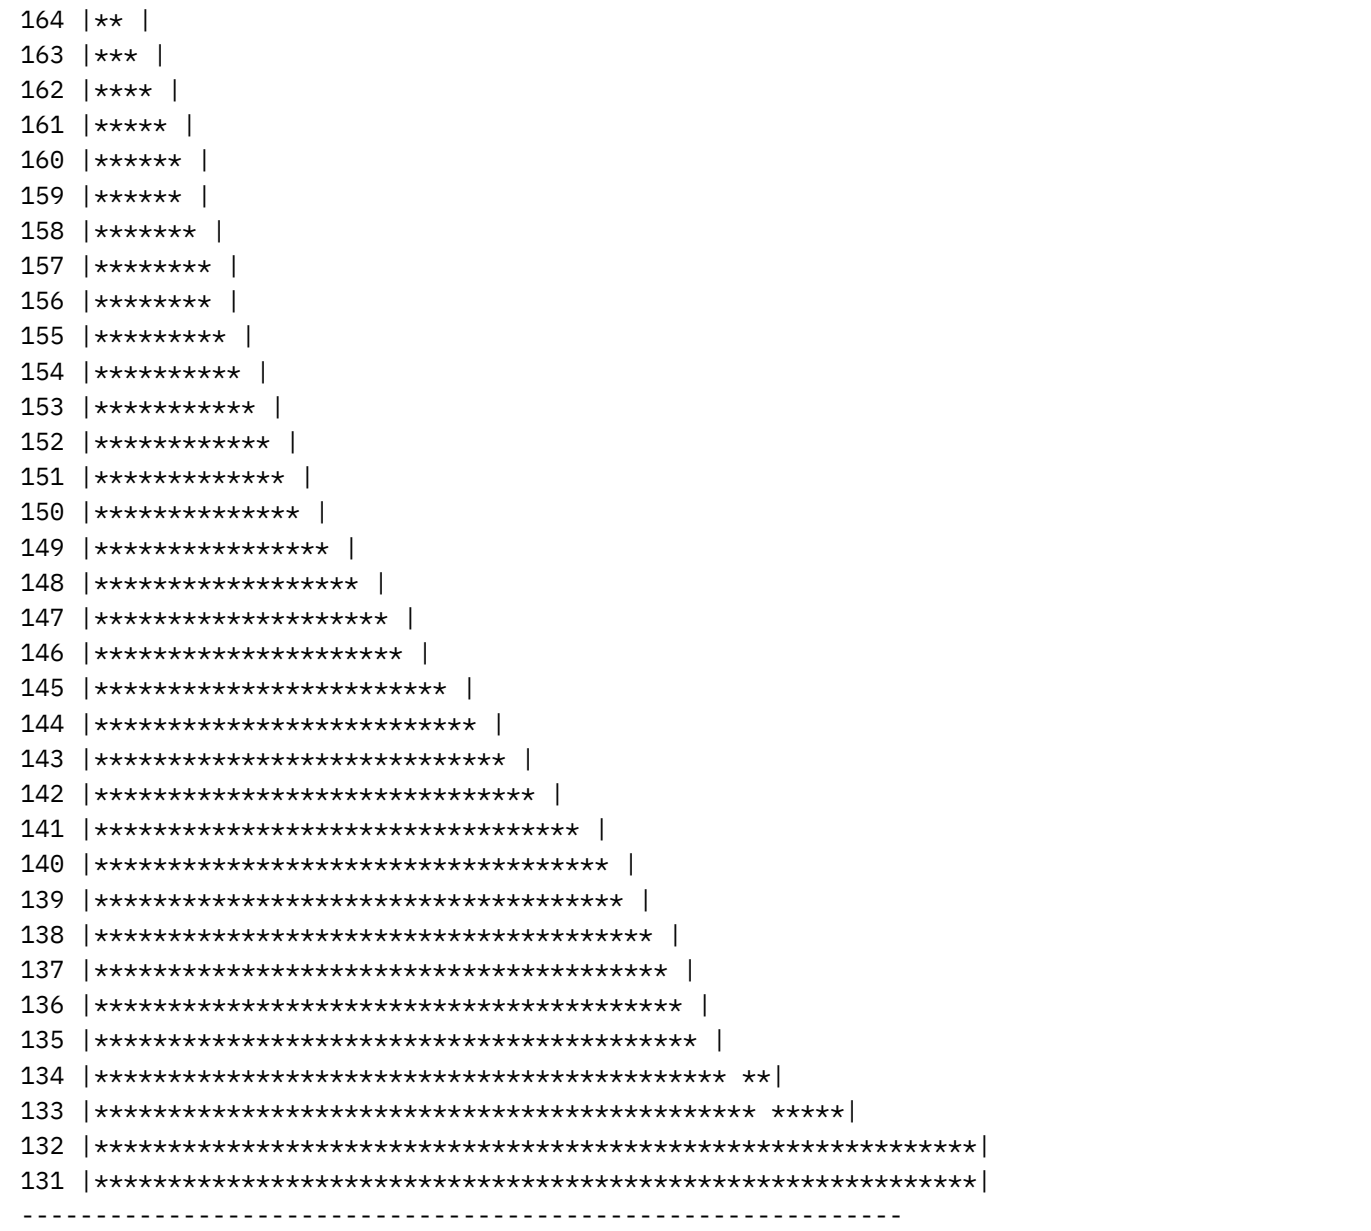
GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX
-----------------------------------------------

_____________________________________________________________
166 | |
165 |* |
```



NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts. For more information, request the document

"Understanding Solar Terrestrial Reports" from: "Oler@Rho.Uleth.Ca" or "COler@Solar.Stanford.Edu". This document, as well as others and related data and forecasts exist on the STD BBS at: (403) 756-3008.

736. Re: I found the ftp site with the callbook data files

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 00:35:24 UTC
From: ron@pilot.njin.net
Message-ID: <Jul.16.20.35.24.1992.19166@pilot.njin.net>
Source record: 287306

>I saw the ftp site with the us call database online. It looks
>like they have taken the buckmaster database and did a split(1)
>on it.

Untrue, it was done by a couple of guys in Colorado who are doing it again for this years data. They buy the tape from the FCC and then hack it into a format that's relatively UNIX friendly (the pipe separated fields).

737. IC-X2A - any comments?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 01:01:20 UTC
From: jeff@xanadu.com
Message-ID: <1992Jul17.010120.9524@xanadu.com>
Source record: 287321

I've seen the glossy for a new radio from Icom, the X2A.
This is a 440/1200 mHz dual bander HT that looks like the W2A.
The cost should around US$600 here in the states. I've heard
that radios are usually test marketed in Europe before they
pop out in the U.S. Any readers in Europe (or anywhere) care
to comment on the radio? The version in Europe is the IC-X2E.
I hear that the X2A is currently going through type acceptance
in Redmond, WA, and will be available in mid-August.

Anymore info on this radio (availabilty, performance, etc.)
would be appreciated.

SB SPCL ARL ARLX028
ARLX028 W2DJJ SK

ROBERT HERTZBERG, W2DJJ, DIED ON JUNE 30, 1992 AT AGE 87. IN THE
1950S HE WAS AN EDITOR FOR ELECTRONICS ILLUSTRATED AND MECHANIX
ILLUSTRATED MAGAZINES.

IN 1955 HOWARD W. SAMS AND CO. PUBLISHED HIS BOOK, ''SO YOU WANT TO
BE A HAM,'' WHICH CONTINUED TO BE UPDATED AND PUBLISHED WELL INTO THE
1960S, AND WHICH INTRODUCED THOUSANDS OF PEOPLE TO AMATEUR RADIO.

ACCORDING TO HIS SON PAUL HERTZBERG, K2DUX, ROBERT HERTZBERG WAS
FIRST LICENSED IN THE 1920S AS 2ABK. AS A TEEN-AGER HE WROTE AND
ILLUSTRATED ARTICLES ON HOW TO BUILD SHORTWAVE RADIOS FOR LOCAL
NEWSPAPERS. AFTER HIGH SCHOOL HE WORKED FOR THE PILOT RADIO
COMPANY, HELPING TO DEVELOP THE POPULAR SUPER WASP RECEIVER.

DURING WORLD WAR 2 THE U.S. ARMY SENT HIM TO ENGLAND, WHERE HE SET
UP A RADIO OPERATOR TRAINING SCHOOL.

HERTZBERG ALSO PUBLISHED BOOKS ON HOME REPAIR, HOUSE TRAILERS,
FIREARMS, AND PHOTOGRAPHY, HIS SON SAID.

741. Reciprocal Licences in the U.K

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 02:48:37 UTC
From: julian@bongo.UUCP
Message-ID: <542@bongo.UUCP>
Source record: 287136

US Amateurs getting a reciprocal licence in the UK

In late May this year there was some discussion about U.S.
amateurs getting reciprocal licences in the U.K.

I pointed out that the only U.S. amateurs that can get a U.K.
reciprocal are: Conditional, General, Advanced and Extra. Yes, that
means no technicians. I also pointed out that U.K. citizens could
not get a reciprocal, but have to get a U.K. licence.

My grasp of these facts was questioned by some.

I also pointed out that I had for five years or so been trying
to get someone at the ARRL to update the reciprocal agreement to
include Technician and get rid of the Conditional. The U.S.
as far as I know has not had a Conditional licence for some 20 years or
so. This just goes to show how out of date this agreement with the
Brits is.

Anyhow, the ARRL have indicated that they don't want to get
involved. I have written to Larry Price, V.P. of International Affairs.
His response has been less than encouraging.

Well, I called "Subscription Services Ltd" in the U.K. who
handle licencing and asked them for the reciprocal licencing forms and
regulations. Finally I got the form today, no regulations. I will try
and get "chapter and verse". I think I will have apply to " The
Radiocommunications Agency", they claim to be "An Executive Agency of
the Department of Trade and Industry".

Anyhow, the form "Application for a Temporary Amateur Radio
Licence". Is illuminating and is finally a document in my hands that
proves my points.

On the back of the form is a list of countries with which the
U.K has reciprocal agreements. This listing is called "Annex 1" (sic).

The Annex has several columns. Column one is the country,
column two is the name of the "HF" licence in the country and the third
column is the name of the "VHF no-code" licence in the country. Note
that in the U.K. there have been two licences, type A which is HF & VHF
with 12 wpm Morris and type B which is the same written with no-code
for VHF (2 M and up). There is I believe a new Novice licence in the
U.K.

Well for the U.S.A. in the HF column is Conditional, General,
Advanced, Extra. The VHF (no-code) column is blank. But it gets worse.

At the bottom of the page is a note that says: " The following licence types do not have a UK equivalent: Australia - Novice. USA - Technician, Novice. Is that plain enough?

Just in case you think I must be slightly barmy and am using an old form I grabbed from the kitty box, the form has an issue date on the front: April 1 1992. Yes, I know they could have picked a better day, but maybe bureaucrats have a sense of humour.

The form does say at the end: "We will be happy to help you". I hope so.

Stay tuned while I wander the halls of the Department of Trade and Industry.

In the reasons that people run AM, you forgot one very important one:

It's fun stuff!!!

I haven't run any yet, but I'd like to. I'm playing with the idea of building a small AM transmitter, but first, I'm playing with the idea of building a regenerative receiver that a friend of mine and I found in an old book. I've never done it, and I even have all the parts ... just have to get down and do it. ... Anyway ... I've enjoyed listening to the AM crowd down here in TX for quite a while. Good stories, full of excellent information too, ... very good clean entertainment. I haven't developed the art of filibustering, don't know that I will. But, I've not had any trouble talking to the AM crowd on sloppy-bucket. They're good guys, lots of fun to talk to, and willing to talk to you ... at least down here. ... Can't speak for elsewhere. Good way to while away a long evening. ...

I've heard plenty of guys give AM a bunch of trouble. I wonder how many actually sit back and enjoy it? ... Whether we like it or not, AM is here, and, as far as I'm concerned, it, like cw, is here to stay. If cw is not required someday, there will be many, I can guarantee (I will be one) who will continue to practice it and use it, for no other reason than sheer pleasure and appreciation of a beautiful thing. Same applies for AM. Yes, maybe the days of AM all over the bands are gone, but AM is not. People use it, and they appreciate the beauty of it, and the nostalgia. I guess that it's like ... about anything--art, food, wat-have-you. Some like it and appreciate it for what it is. I don't get into art or eating snails, but that's fine because there are some who do. Same sort of thing. There's room for everyone. Enjoy!

Does anyone know of a vendor of RF equipment that
operates in the 31ghz GMRS band? What is the price
class for this type of equipment?

Anyone have a list of Part15 wireless modem vendors?

I guess I'll stick in my $0.02 after all. ...

I've been a ham for close to 5 years. I've run into mostly wonderful people. I've run into a few bozos and jerks and Bubbas and everything else too. But mostly nice guys/women. I've made many friends, may of whom I may never meet in person. I've spent many enjoyable nights at the key or microphone with people, or running up and down the band just looking around. I've jumped out of my skin a couple times when I worked that "rare one" too ... ham radio is a wonderful thing. It's even gotten me out of a jam or three. I think my figures pretty much agree with Jeff's--99% of 'em are great, and the others--well--let's not talk about them, shall we? :) Personally, I see no reason for some of the behavior I've seen, especially considering that we represent our country, whatever it is, to others, andothers get their impressions of others like us by our actions or our conversations--what else do they have? I'm sure that more than one SWL has become disillusioned by ham radio when they hear some of the behavior, but I like to think that a bunch more are in awe of radio, as am I, as was I at 14 when I first read about ham radio in "How To Become A Radio Amateur"--a book from 1950 no less. ... I seem to ramble. Ah well...

Hope to run into some of you as we project into the luminiferous (sp?) ether...

Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB DX ARL ARLD038
ARLD038 DX news

Thanks to Steve, W9NUF, the Northern Illinois DX Association, and Ted, G4UPS, for the following DX information.

CROATIA and SLOVENIA have been admitted to the ITU. Croatia was allocated the call sign block 9AA through 9AZ.

SIX METER NEWS. Effective July 2, 1992, 80 Spanish stations will be authorized to use 50 Mhz. They will only be able to do so in certain areas, for example, stations in Madrid will not be authorized. The 80 stations must change their prefix from EA to EH while on 50 MHz, for example EA4CGN becomes EH4CGN.

Since the Spanish PTT did not have time to notify each station, they FAXED the Spanish IARU organization, URE, and had them notify the stations by telephone.

EGYPT. SU1HV is now active with heavy emphasis on the WARC bands. QSLs go via IS0LYN.

FAROE ISLANDS. FD1NZO and F6AMI are signing /OY. QSLs for both go to FD1NZO.

GIBRALTAR. ZB2FK is very active on 10 meter CW between 1900 and 2100z. QSL direct ONLY.

KUWAIT. 9K2MC has been very active on 20 meter SSB. Watch for him around 14185 kHz at about 2330z. 9K2ZR has been on 21025 kHz at 1800z. QSL via K8EFS.

MAURITIUS. Jacky, 3B8CF, has been quite active on 7005 kHz around 0000z. QSL to DJ5RT.

SOUTH GEORGIA. Keith, VP8CBK, is active on CW, SSB and RTTY on 10, 15 and 20 meters, but has been known to QSY to 40 meters upon request.

TUVALU. T20WW was worked on 21035 kHz at 1045z. QSLs go via NW3W.

ZANZIBAR. The 5H0ROA operation is on through July 31. This is an all band effort on CW, SSB and RTTY. QSLs go to A47RS. Between July 21 and 27 they will be active from Pemba Island.

ALBANIA. Cards for ZA1A go via OH2BBF. QSL ZA1B via I2MQP. ZA1D was worked recently on 14025 kHz at 0025z.

WHERE'S THE WHITE OUT? Here is a correction to ARLD036 dated July 10. QSLs for Brian, VP8CBK, should go to K1IED, and NOT to K1EID as mentioned in the original bulletin. Our apologies to all concerned. NNNN

It's Slovenia (in English; in Slovene, it's spelled Slovenija).
^

>Croatia Jun 25, 1991
>Macedonia Nov 17, 1991
>Bosnia & Herzegovina Mar 3, 1992

>The ITU is issuing these new countries new prefixes.

Croatia already has its new prefix (9A). Slovenia is still waiting for
its new prefix. There is a horrendous war going on in Bosnia & Herzegovina
now, and I think talking about DXCC status there in the middle of Europe's worst
carnage in half a century would be a little insensitive, to say the least.

Hams there have been doing INCREDIBLE work handling emergency and health &
welfare traffic, since most other lines of communications are down.
They are certainly NOT operating as usual for prefix/DXCC
hunters.

Macedonia is another issue. While Slovenia, Croatia, and B&H have been
recognized by the West and admitted to the United Nations General Assembly,
Macedonia has not yet received such recognition -- primarily because
Greece is upset about the use of the name Macedonia (Greece also claims
this name). I would be surprised if the ITU is actually issuing new
prefixes for Macedonia.

>Would someone please wake up the DXAC.

As far as I know, the DXAC has received a formal request from a ham in
Slovenia for recognition (along with a letter and some documentation
from me in support of DXCC status). I was told that votes are usually
scheduled about 6 months after receipt of such a request. I believe there
has also been request from Croatia, although I have no details.

I, Conway Yee, N2JWQ write about a concern I have about losing
lifetime memberships/subscriptions upon moving.

jkearman@arrl.org (Jim Kearman) replies:
>Just because you're paranoid, doesn't mean we're not out to get you!
>Good grief, Conway! You're responsible for telling us if you move.
>We're not a detective agency, after all. If you are moving, go to
>your post office and get a change of address card. Copy your
>name and address as they appear on a mailing label, if possible.

Absolutely. I agree completely. The subscriber/member has primary
responsibility for initiating address changes. The concern I have is
after sending in a card, absolutely NOTHING happens. Dealing with
bureaucracies in not the most fun thing to do.

I remember joining a "Compact Disk Club" a few years ago. When I
tried to quit the "club" (after my obligation was fulfilled), NOTHING
happened. They kept on sending me catalogs and CD's which I had
"ordered". It took me over six months and much hassle before things
were settled.

Another example is the sewage bill at my father's house. It is still
in the name of the original owner (there have been two owners since
them). Despite numerous phone calls, letters, etc. the bill is still
in the original owner's name. Whenever he talks to an office droid,
action is promised, "Absolutely, Mr. Yee, we'll get right on it and
fix it right away!" Nothing happens. The city simply doesn't care.
My father has basically given up on this.

>This makes our sadistic (only kidding, Deb) Circulation Dept's
>job easier, but do the best you can. Mail us the card, and we'll
>change your address.
>
>I recently changed my address. All my Life memberships (including
>two of the three you mentioned) followed me, after I sent said
>forms. Sheesh... 73.

I'm sorry but I didn't mean to imply that the employee's of ARRL acted
in this way. For this reason, I specifically added on several other
organizations which I know have lifetime memberships (i.e. National
Geographic and NRA). No offense was meant. I simply wanted to point
out a possibility.

Incidentally, the several pieces of email and the response on the net
unananimously supports the contention that the situation is not what I
outlined in my previous post. All responses said that lifetime

memberships followed the member very satisfactorily.

I am glad to say that the worse case scenario which I posted earlier
does not appear to be reality.

>
>Contact Devon Bowen, KA2NRC - bowen@cs.buffalo.edu - if you want
>to support the project or you'd like to get the updated data yourself.

Wait!!!!!

Devon is the contact person for questions/problems about the callsign server
that he wrote.

The contact person for supporting the project and getting the updated data
varies from year to year. I ran the project this past fall, someone else is
running it again this summer (see posting elsewhere in this group), and I may
be running it again this fall.

TO THOSE INTERESTED IN UPDATED DATA: You would be best either:
a) contacting the summer person (Fred.Lloyd@west.sun.com)
b) waiting until this fall when the next version of the project kicks in.

I say the above because the data I have is from NOVEMBER 1991, so I think it a
waste of time/money for anyone to request the data from me now.

Please watch this group for updates on the callsign project.

The Mac 13" color monitor emits 60Hz magnetic fields strongly
enough to interfere with a telephone handset at 3'. Apple has introduced
a 'low field' monitor to deal with this problem. The 1992 NEC Multisync
series are also available in "low field" versions. This is intended to
cut VLF emissions, but it might help out hams, too.

Towers are getting more attention recently, due to some aircraft
accidents with cellular towers. There are large numbers of cellular
towers going up, and they tend to be located differently than more
traditional tower sites, usually being placed alongside highways.
A recent fatal accident involved a 400' or so tower alongside an
interstate in a rural area. Tower construction took less time than
expected, and power for the lighting wasn't in when the tower reached
its full height. So the tower was unlit for a few days, and was hit
by a medical helicopter flying along the interstate. (per article in
Telephone Engineer and Manager).

>They're denying their demise, but say instead that
>they're just getting out of the kit market.

Ramsey Electronics has some cute and very cheap kits for various
radio applications. I bought their 10 meter FM receiver ($29.95),
a simple little dual-conversion receiver with a VCO, AFC, and squelch.
Unfortunately, it came with four parts missing, the wrong value
pots, and one hole misdrilled on the PC board. Their kits do offer
a way to build simple, modern radio gear and see it work. This one uses
a NE602 and MC3359, and it's all DIP and lead components, so it's
not so integrated you can't see what's going on, and it's not so
minaturized that you need to learn surface-mount soldering technique and
get all the surface-mount tools.

Ramsey is at 716-924-4560, and they seem nice people, even if they
do have a quality problem.

Brian, I would think that the person MUST have passed his 5 WPM code test
before any doctors' excuse would resque him from the 13 and 20 WPM. At least
that is the latest ruling from the FCC. He doesn't have the 5WPM code test
passed, either. He also (which I failed to mention in my earlier post)
suffered from a stroke a while ago. According to his doctor, his memory has
been affected by this. He isn't senile, however things just don't stick
real hard with him anymore. My point was the rude HAMS who always seem to be
making comments on repeaters about how NO-CODE Technicians are less than HAMS.
Thats not true. This guy, however disabled he may be sure beats the attitudes
of a lot of HAM who have been doing it 40 years. I really get tired of hearing
how they should make everybody take the code cause I had to. It is not
entirely the FCC that makes the decision. Remember WARC? Well, that is one
place that sets the requirement for HF priviledges. Yea we have mentioned to
him the waiver for the code requirement, however I don't personally think he
will ever learn the morse code to pass it. This guy shows a lot more
ettiquette on the repeaters and simplex than do a lot of HAMS in the area.
Hope that will explain why I quoted his case as a point.

Source record: 287130

I think your question might better be posted in rec.radio.shortwave (maybe you did, I haven't checked) - I'll answer here anyway.

Unfortunately, it's not all that easy to receive Italian broadcasts anywhere outside Italy. As a first step, I'd recommend getting the latest edition of the WRTH (World radio & Television Handbook), available at any good bookstore (if not in Passau, places like Hugendubel and Lachner in Munich carry it).

You might be able to find transmissions in Italian which do not originate in Italy; off the top of my head, there's very little form Italy itself on shortwave.

However, in Passau, you might be able to receive some Italian stations on the medium wave band (but probably only after dark). If I remember correctly there's a fairly strong transmitter in Milan on 900 kHz (but the WRTH would give a definitive answer).

Another way is to put up a really good FM (UKW) antenna and a good tuner - you may be able to pick up fomr Italian FM stations (at the very high end of the band; the rest is hopelessly covered by German/Austrian stations). Unfortunately, many of those are South Tyrolian stations and may not have much prigramming in Italian.

I have no problems receiving a coule of them wwith a simple antenna in Munich; but the ones directed towards North generally transmit only German programs.

Finally, there are a couple of Italian-language (but not Italian) programs on satellite. And, of course, you can receive Italian TV programs (Rai Uno, Rai Due, Italia 1, Retequattro, Canale cinque) via satellite.

757. receiving Italy from Germany

>of radio stations worldwide. It seems to be a quality device because it's
>produced by Siemens. Unfortunately i've so far failed to reach my aim for
>which i've bought it : ....

Hello Carsten,
Here are a few suggestions to help you:
First, I presume your radio is able to pick up other stations OK. Are you able to pick up French/Austrian/Swiss stations, for example? Check to see what you can pick up at the moment.
Next, the antenna on your radio may not be sufficiently sensitive to pick up signals from Italy (though it should be ... most world band receivers are quite sensitive). Check the Siemens manual for advice, if any, on connecting a larger antenna. You could also check your local library or bookshop for books on Amateur/Ham radio, which will contain advice on making simple but effective antennas.
Finally, do you know what frequencies the Italian stations transmit on and the times they are transmitting? You might find this information in an Italian newspaper, or by writing to the nearest Italian consulate. You could also try to get the World Radio and TV Handbook, which is very useful, but I don't know if there is a German edition.
Also, some frequencies will not work. For instance you won't pick up anything Italian on the FM(UKW) band because you are too far away and also because (as you say yourself) of the Alps. You should probably concentrate on the Short Wave (KW) and possibly the Medium Wave (MW) bands ase these are more likely to yield results. The reception conditions also vary by day and night so try in the evenings as well as daytime.
I hope this information is of some help to you.
Auf Wiedersehen und Viel Glueck!
Best wishes,
Simon Woodworth.

Most likely he is pretty hard of hearing. Then again, maybe not... I've got a hearing loss and never noticed that 2 extra 's' units made much difference. Just turn up the volume a little. My experience has been that a small percentage of old timers act this way and a larger portion of the more recently licensed also act this way. My usual response is to tell them that I hope their mother bites them when they return to their kennel.

I was unable to obtain acceptable SWR with an Antenna Specialists on-glass antenna. Turns out that the UV coating on the vehicle glass was radiating. I got a lot of help by calling the Antenna Specialists tech support number. I assume Larsen has a similar support line. In my case, the vendor supplied another coupling box which worked a little better. The SWR isn't great, but it is acceptable.

I believe Larsen sells a remount kit to reinstall the antenna on another vehicle.

I occasionally hear some noise on 17m and I'd like some help trying to identify the source. The noise typically covers 18.120 to 18.140, although the actual width varies from about 10kc to 20kc. (This is a good chunck of the 17m band.) It sounds like regular background noise to me except that it's an S unit or two stronger than the background noise. It's strong enough to interfer with signals I could otherwise copy. A friend thought it sounded a little bit like fax. I ruled out receiver problems as several others in the area have also heard this interference.

I've heard some speculation on the source of this noise from some secret military digital mode to over the horizon radar. Any ideas on the source of this interference and how to deal with it?

Source record: 287140

I got my ARRL life membership back in the mid-70's when it was 20 times the annual rate of $9 --- so it cost me $180. I was in my early 20's then. With all of the rate increases over the years (what is it now, $30/year?) I figure that I recently passed my "break even" point (after about 15 years) taking into account if I had put that original $180 in a passbook savings account and made %6 each year on the balance after paying membership dues. With interest rates being down now, it becomes an even better bargain.

Unfortunately, the best time to get a life membership is when you are young (teens--early/mid 20's, etc) however, often that is when one can least afford it. It would be great for a new teenage Ham to expects to stay with Ham radio for life to get his life membership now, but I am sure most teenagers would rather put that $750 towards some radios instead of a membership.

Apparently this antenna is *NOT* factory tuned. It turns out that it
needed to have about 5 inches cut off. Now, it has as nice SWR curve
that is well under 1.5:1 at the band edges and perfect 1:1 at the center.

The final length is just over 38 inches which comes out almost perfect
for 1/2 wavelength at 146 MHz according to the formulas.

Thanks to Dale Mosby <dale@sequent.com> for his assistance :-)

I sent a message last night to Bill Shipp, KC1AG, the New England DXAC representative. I don't remember exactly what he said, but they have received a formal proposal from one of the Yugoslav republics, probably Slovenia, as Sharon, KC1YR said. He added that he would be preparing a document on the current DXAC status, which I will upload to USENET as soon as I get it. Rest assured that the DXAC is not sitting on its thumbs on this matter - there is a lot of data to sort out. The date a country "declares" its independence, and the day that independence is actually achieved and recognized are two entirely different things.

Unfortunately for this gent, this isn't so. If you have
received credit for a 5-WPM test, you can then apply for
a waiver of 13- and 20-WPM code tests. It's the "you have
to pass a code test to operate below 30 MHz" thing again.
FCC requires the 5-WPM test; only 13- and 20-WPM tests can
be waived with a physician's certificate.

There may, however, be methods available to enable this
person to pass the 5-WPM test, such as visible or tactile
transducers. Perhaps there is some frequency that he can
hear well enough that it can be used, instead of the
traditional pitch. I agree in advance, this seems unfair
to him. I hope a way can be found to help him out. 73.

1. It's either business or it isn't. If it isn't business
related, it's legal. I've noticed a lot of companies using
background music when they put you on hold. That, of course,
is illegal, and you'd have to disconnect from the patch.

2. I'm not qualified to discuss the legality of a long-distance
call.

Absolutely!

I've used my perfectly good Kenwood transceiver about twice in
the past 2 years since "discovering" AM. The mode seems much
more conducive to ragchewing, and the pace is slower and mellower
than SSB QSOs. "You're 59 plz QSL...73" - type qsos are
unheard of.

Collecting, rebuilding, and modifying old gear is an inevitable
offshoot of the hobby, and most of the folks one meets on the
air are helpful and quite knowledgeable about this stuff. I'm
using quite a bit of gear that is older than I am, but it's
fun/possible to work on, and built like tanks.

29.0-29.1 is a fun spot from September to March....21.415
is also becoming a calling frequency for AM activity
as well.

Anyone have a Viking 500 they want to sell to a good
home?

Indeed. Thanks for pointing this out, Andy. The Callsign Project was
the original brainstorm of Rusty Carruth. By buying the tape from the
Dept. of Commerce for $625 and selling copies of it for $20-$25 apiece
(did Fred just drop the price to just $5?), he could provide the net
with very low-cost updates to the various telnettable/E-mailable
callsign servers out there. The clinker is that the whole economics of
the thing collapse if anyone can simply get it via FTP. The cost of the
tape also precludes more than about a bi-annual update.

Here is the relevant contact info from the Elmers List for the Callsign
Project:

>It is next to impossible to find out if any lifetime members
>have been screwed. Comments anyone?

I am a lifemember and I have had no such problems. Occasionally I will get a mangled QST (or not get one at all) and I phone Newington and they happily send along another one. When I stopped at the ARRL table at Dayton, I saw someone come by and say the QST he got last week was mangled and they just handed him another one. No big deal.

The ARRL is a cool repository of information. Their information may not be the best or the most up-to-date (it's mostly contributed by members), but it is certainly the most comprehensive. For instance, they have a great heap of info about acquiring ham licenses around the world. Just give them a call and they will send you what they have on operating anyplace. I have never been grilled about my member number or anything when I have called. They just take my address and send the info. Way cool.

778. How can I determine charge state of Ni-Cad battery?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 17:42:41 UTC
From: rossi@gvlf9-q.gvl.unisys.com
Message-ID: <1992Jul17.174241.16460@gvl.unisys.com>
Source record: 287153

How can I determine approximate state of charge of a Ni-Cad battery pack?

One that is say 1/2 charged vs. one that is fully charged?

I guess I would need to measure the voltage under some kind of fixed load?
I can't remember -- is it Ni-Cads or Alkalines that have a fairly flat
voltage curve right up until the end then drop off suddenly? If this
is true for Ni-Cads, then it would seem to me that it would be difficult to
determine the charge state along the way unless you had a very sensitive meter.

Also, anyone have some good circuits for Ni-Cad chargers? I recently
bought an ICOM IC-24AT and $110 seems a bit steep to me for a battery
charger. I would like something that will charge the 7.2V 1000mA pack as
quickly as possible but be smart enough not to overcharge it? Seems to
me that something could be built for $30-40.

Hi,since I lived in Europe for many years, your question brought memories
from my youth. With a Xtal. detector I was able to listen to Radio Budapest
Berlin, Luxenbourg,etc.,so you should be able to hear as well.
Yes, you may be just in thr Twilight Zone of one area but not to other.
What may hapend is that you are not listning in the right time and right
Freq. assuming that you have same kind of antenna connectedto the radio.
Try 6MHz band and/or 7Mhz/9MHz/11MHz early in the evening. Medium wave
DX is at best from sunset till midnight. You may revers your search and
write to RAI (Radio Assosiacione Italia) - Roma or Radio Switzerland
and ask for time table of there trassmissions to your perticular area.
Thay made the home work and will tell you where and when to tune in.
By the way Radio Deutcheland has programs in Italian so you may just
give them a call on land line and inquier.

780. What to do about bogus calls?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 17:43:31 UTC
From: wejones@crdec7.apgea.army.mil
Message-ID: <9207171336.aa03143@crdec7.apgea.army.mil>
Source record: 287155

A few days ago I was listening to a local 2-meter repeater, waiting for a call from a friend, and heard a contact between 2 "hams". One of the hams was using "CB" language to some extent, but was otherwise polite, and following the rules. After the contact was terminated, a 3rd ham came on the frequency calling the "CB" ham, and went on to dicipline the fellow for using CB talk, and finally accused him of being a CB'er and not having a ham license. He then told him to cease transmitting and go get a license. The "CB ham" said he was sorry that the other ham felt that way, claimed that he did have a license and signed off. I thought this was rather shabby treatment of a fellow ham just because he didn't talk like a ham, until I checked in the call book, and sure enough, there were no references to the "CB ham's" call. Two days later, I heard the same fellow, with the same call except for an extra letter (went from 1 x 3 to 2 x 3). On checking the book this was a bogus call as well. It is obviously not worth the effort trying to tell this fellow to get a license, as doing so aparently just makes him change calls, and he will eventually hit a call that exists. Is it worth reporting him to the FCC? Do they have the time to chase down people that are not causing any trouble other than transmitting without a license?

On a related topic, I have heard another call sign used on packet by people with at least 4 or 5 different names. The assumption is that this must be a club station used by several members, but how is anyone supposed to know? This particular station seems to be used by a local university for remote transmission of lab data, and I have seen occasions where someone would try to contact the station typing "is anyone there??? If anyone is there just type on the keyboard." This sounds like an inapropriate use of amateur radio to me, ie apparently inviting a non-ham to control a packet station, but there seems to be no way to tell since the station never identifies the control operaters call, just the station call, which is valid. Also, is use of amatuer frequencies for furthering university research projects appropriate? This seems clearly to be non-amateur to me, since the faculty researcher is getting paid for doing the research in one way or another? If this experimentation was being done by an individual as a hobby, I would see no problem with it, but as part of a professional effort, it doesn't seem appropriate. Any comments?

783. What happens on 440 Mhz ?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 18:28:17 UTC
From: kwmc@cbnewsj.cb.att.com
Message-ID: <1992Jul17.182817.165@cbnewsj.cb.att.com>
Source record: 287168

I am considering purchasing a dual band radio (2m 70cm) but
before doing so, I'm curious what advantage there is to be gained
from such a move (other than the obvious extra bandwidth ...

Does 440 give me better range (line of sight) or less tropo ducting ?

Is there less congestion, more repeaters, cross band repeaters ?

What can I do there that I can't on 2m

And (for those in the UK) what is the 440 band like there ?

Many thanks for any help yo can give ....

Ken Cochran N2RPN kwmc@usl.com

>Dept. of Commerce for $625 and selling copies of it for $20-$25 apiece
>(did Fred just drop the price to just $5?), he could provide the net
>with very low-cost updates to the various telnettable/E-mailable
>callsign servers out there. The clinker is that the whole economics of
>the thing collapse if anyone can simply get it via FTP. The cost of the
>tape also precludes more than about a bi-annual update.
>

No, I did not drop the price to $5. Here's the story:

Rusty Carruth (N7IKQ) and myself (AA7BQ) both live in the sunny
Phoenix Arizona area (not Colorado :-). Earlier this year, Rusty
indicated that he was unsure if he was going to continue the original
project which he started a couple of years ago. The two of us got
together and I agreed to handle the copying and distribution while
Rusty would handle the procurement of the original from NTIS. In
addition, I agreed to assume financial responsibility for 1/2 of the
cost which is now at $700 (i.e. $350 to me). With this in mind, and
considering the possible response level, I then set the copying fee
at $20 per tape.

My personal interest in this project was simply to do my part in
supporting the project, and through my efforts of rounding up four or
five different tape drives and making copies, running to the post office,
and etc., I could get a copy for myself to update the server which I
operate out of my home on a land line BBS. There is a potential that
I could make some profit out of the project, but looking at it from a
realistic point of view, I seriously doubt it. Considering that it
will take several hours of my time and considering that we still don't
know if we'll get $350 worth of business, it looks like I may have to
declare chapter 11 :-) before the project is done.

Therefore, let it be known that Rusty and I are _the_ authoritative
source for the callsign database, and the address to send all blank
tapes and checks to is:

```
-----------------------------
Fred Lloyd, AA7BQ
8215 E. Wood Dr.
Scottsdale, AZ 85260
-----------------------------
```

Anyone may also e-mail me for info at fred.lloyd@west.sun.com.

AND NOW, GOOD NEWS!

Since my last posting, I have received about 8 replies from more people wishing to get a copy. Thanks to:

beers@acsu.buffalo.edu
IANR003@UNLVM.UNL.EDU
adams@chuck.dallas.sgi.com
bill@c3177208.ssr.hp.com
kd1hz@anomaly.sbs.risc.net
jra@lawday.daytonoh.ncr.com
grebus@isis1.enet.dec.com
kp2a+@andrew.cmu.edu

It now looks nearly certian the the project will continue, however we still need about 6 more people to break even. If you have any interest in obtaining a copy, please send me some e-mail and mail off a blank tape in a postage paid, pre-addressed return mailer along with a check for $20 to the address above. We are planning on supporting the following tape formats: Qic-150 (best), QIC-24 (60MB), Exabyte 2.3G, 9 Track.

Again, thanks to all those who are supporting the project.

-fred

788. Scanner sensitivity: NiCads vs. Alkaline Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 18:43:51 UTC
From: sysrick@orion.spd.louisville.edu
Message-ID: <sysrick.711398631@starbase.spd.louisville.edu>
Source record: 287167

I'm curious about something: for scanners like the PRO-37 and
the PRO-43, am I giving up anything in the way of sensitivity
if I use NiCad batteries (because of their lower voltage)?

Thanks,
Rick

From: n3fkv@tomcat.gsfc.nasa.gov
Message-ID: <331@tomcat.gsfc.nasa.gov>
Source record: 287162

Thanks to the alert from Graham, VK5AGR. NASA's AO-13 set #433 is bogus
and has NOT been included in this week's keps update. Set #431 is repeated.
73, Dick

I think a better approach would be to help the guy work towards
a license. Look at it this way: we all benefit by having more voters
with ham tickets. Alternatively, you or your club might even like
the guy once he has his license. Use the FCC as a last resort.

The way you might try working it is to befriend the guy, have lunch
with him and then hook him up with a club that offers licensing
courses, etc. Once he is appropriately culturalized, he will almost
certainly do the right thing, IMO.

Has anyone got a design for an indoor antenna for 80 m.? Such an
antenna will obviously be shortened; a vertical design is preferred.

E-mail to me preferred. This is for a friend in British Columbia.
Thanks.

Hello,
I am a citizen of India, and have the Advanced Radio Amateur
licence from India.

Can someone give me info about how I can apply for a reciprocal
licence for operating from the USA. Any other relevant info
will be of good use to me.

Thanks
:)

>Radio is all about.

I agree. Unfortunately, this is not a new phenomenon. My General
call in 1963 was WB2EDW. I lived in the Buffalo, NY area. There
was a nearby ham (I think his call was W2OY), who would call CQ
on 75 AM, with these conditions: No kids, no lids, no space cadets,
no WB2s. I had a home-made 75-meter transmitter and tried calling
him, to no avail. Other locals told me my audio sounded fine, so
that wasn't the problem. He just didn't want to work me because
I was young and newly licensed.

On CW, I found that no one could tell much about me. My squeaky
voice wasn't noticeable there. Ever since, I've had a soft spot
for CW (and, puleeze let's not get THAT thread going again; I
made thousands of Qs on SSB last year, and I also operate the
digital modes).

In any group as large as Amateur Radio, you gotta have some
baddies. We're probably better off than the "general population."
I feel sorry for these wackos; they must be lonely. The only
way to deal with 'em is to ignore 'em, though. Too bad for
them. 73,
Jim

>image rejection across the entire reception band.
>
>The scanner also features:

Gee, a posting from "tandy.com" -- must be Radio Shack.

Well, being a scanner person, I'm really disappointed. What we DO want
is a "handheld 2006" -- we DON'T want the PRO-43

Still, the concept of "bands" - why not wide coverage - like the PRO2006
and the AOR 1000XLT & ICOM R1?

Too few banks. Only a weenie can get along with 200 memory channels.
400 is ok, 1,000 is better. If you can put in 400, the incremental
cost of 1,000 is minimal -- give me 1,000 memories.

Still no S-meter.

How many lower/upper limit scan banks? (1) Can I lockout a control chanel
when scanning trunked systems? (NO). What are my freq increment
options (NONE)

You made cellular 800 Mhz restoration easy in the PRO-2006 (clip one diode
in a easily located place - a 45 sec mod - includiing opening the case).
From early reports, cellular restoration in the PRO-42 is difficult and/or
impossible.
==========

Given some of the other handheld scanners on the market and their
"price/performance" or "price/feature", and the length of time
they have been available (AOR 1000 about 2 years; ICOM R1 2-3 yrs (nonUS))
the new PRO-43 stands out in my mind as a real turkey and a step
backwards.

We want
1) wide coverage. No bands. Continuous 500 Khz - 1.3G (or so)
although 25Mhz-1.2G would be acceptable (like the PRO-2006)
a) include selectable band pass filtering or preselectors

b) include a ferrite loop antenna for good AM reception
on a model that receives down to 500Khz

2) Lots of memory with alpha-numeric display. 1,000 memories with
8 char alpha-numeric display. So, I can see freq and add my
own designation as to what it is.
a) "software" configurable memory banks. Let me choose if
how many banks and channels/bank I want.
b) use EEPROMs so I don't need a battey to back memory.
c) give me a interface to a PC for upload/download.
(not impossible (pricey) if SHARP and Casio can fo it
in the Wizard and BOSS

3) Nickel-Metal-Hydride Batteries. This new technology has double
the capacity for the same size "AA" cell. Currently used in
notebook computers and other consumer apps. Supply me with
a set of these cells or a "pack" with these cells installed.

4) PL capability. Both a "search" PL to identify the PL of received
signals as well as PL to block unwanted transmissions.

I don't this is asking too much. This is all current technology. Its just
that no one has yet assembled this into a single radio. These are the most
often "wished for" and desirable features of any serious scanner.

Tandy has no competitive advantage in giving us a "rehash" (PRO-43) of
what is already available. I'd say that the "new" PRO-43 is less than
equal (feature-wise) to radios that have been on the market for several
years in the same price class ($300-$400).

No new ideas at Tandy? -- " Americas Technology Store " ?

797. Advice needed on xtal 2m rig

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 21:29:10 UTC
From: cvm@nauvax.ucc.nau.edu
Message-ID: <17JUL92.21291046@nauvax.ucc.nau.edu>
Source record: 287171

There is a hamfest in town next weekend and I am considering buying one or two crystal 2m mobile rigs. I think this type of rig would be acceptable in one of my cars and in my house. In both cases, I only need 3 repeater frequencies and maybe one simplex frequency. Room for growth (a few more frequencies) would be nice. I don't need PL tones and I could use my HT to generate the DMTF tones. I wouldn't complain if the radio had PL tones or DTMF. Obivously I am hoping to pick up such a rig very cheap.

I have only had my license a few months now and would like some advice on what to look for in this type of radio.

1 - Are there any specific models that someone could recommend? Or should I look for just about anything?

2 - What should I do to ensure that the radio works and is in resonable condition?

3 - What about crystals? Are they easy to find for some or all radios? What do they cost?

4 - What type of rf power output can I expect find in this type of radio? I would like to get at least 25 watts.

5 - What is a reasonable price range for this type of radio or for specific models?

This seems like a lot of questions to me but I would like to be as informed as possible before buying. If there is anything else I need to consider please tell me. Thanks in advance for the help.

799. new ham needs help on selecting an HT

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-17 22:07:09 UTC
From: gdrew@cs.umd.edu
Message-ID: <59074@mimsy.umd.edu>
Source record: 287170

The subject line just about says it all. I have just recieved my technician liscence, and I have pretty much decided that I want an HT as I can use it in my car, house, and elsewhere. I have been leaning toward a 2m/70cm dual band, but I am having a hard time judging what is out there. In addition, I would like to look into used equipment (I am a grad student on a very limited budget). I would appreciate it if people could send/post their suggestions on great ones, models/manufacturers to avoid, and on which of the features will turn out to be the most desirable. Thanks!
-- GDD
N3MXX
PS. Given my budget, I am also looking at 2m only units.

801. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-18 01:04:29 UTC
From: tkelso@afit.af.mil
Message-ID: <1992Jul18.010429.5797@afit.af.mil>
Source record: 287098

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

Message-ID: <1992Jul17.202340.11732@walter.cray.com>
Source record: 287177

A few may have missed my smiley (:-)) on 75 m AMers? I've had a bit of fun with AM too. I guess my only real complaint is that I've heard many people try to break into the 3870 round table and never be recognised. Had they had that extra kilowatt or two to (in the words of Spinal Tap,) 'push them over the edge' they could have have made it. The 3870 guys can usually tell the solid state gear right away.

But I've never heard the 3870 guys be rude to myself or anyone else.

Now certain parts of 40 meters is another story... What is it with these OFs in Los Angeles? They sit around all weekend on 7255 or so and swear at each other, talk about who called whose wife this or that, and jam each other. And it drones on for years. Talk about getting a life.

They even tried to jam us on Field Day last year. After we had been running a frequency for about an hour, this guy came on an ordered us off his frequency! He threatened to call the FCC, was running gobs of power, etc. We told him *we* would call the FCC if he persisted. So they then tried jamming us for a while. However a full-sized (45 foot boom) 3-element 40 m yagi on a mountain top (designed with NEC-2 on a Cray...) and an automatic notch filter, we hardly noticed them. In fact, due to obscure issues with the overloading of the phone rig, we actually worked *higher rates* while being jammed! (Heh heh...)

They left us alone this year. We came prepared with four elements on 40 m ('The Peacemaker'). :-)

803. Edmonton Heritage Days Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-18 01:36:30 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Jul18.013630.2642@ve6mgs.uucp>
Source record: 287186

We will be operating a special event station at the local Edmonton Heritage Festival. The call sign will be CH6EHF and will be used on August 2 and 3rd between the hours 1600 and 0100z each day. We look forward to any contacts we can make on the HF bands (primarily 10, 15 and 20M SSB and CW), or over satellite (I am personally unsure of the modles we will use).

Also, Canada is celebrating it's 125th Birthday, so you may hear the special prefic CJ used in place of VE for stations celebrating this fact.

Ciao, 73 de VE6MGS/Mark
Public Service Director, Northern Alberta Radio Club -sk-

804. Re: navigational beacons

Newsgroup: rec.radio.amateur.misc

Regarding voice broadcasts vs. Morse on aircraft navigation beacons,
Michael A. Covington writes:
>I think slow Morse is used to make them easier to hear. One is often
>dealing with a very weak signal and a lot of atmospheric noise (crashes
>of lightning, etc.).

julian@bongo.info.com (Julian Macassey) writes:
>It is possible to put voice on a VOR beacon and have the beacon work as
>intended. I remember there used to be a VOR beacon just North of
>Copenhagen Denmark (OZ) that carried voice weather. The voice can't be
>100% modulated - neither is the Morris ID -, so with the low modulation
>and the VOR whizzing around it sounds pretty cruddy. But think of the
>opportunities. Advertising. "This is VOR Beacon PDZ brought to you by
>Flamo AvGas. Next time you're on the ground, fill up with Flamo".
>The revenue gathered from VOR commercials could help pay for
>the whole ATC system. Capitalism at its finest.

Yes, there are a few VOR's with TWEB (Transcribed Weather Enroute
Broadcast). While the commercial idea is amusing, the voice capabilities
of most VOR's are used by pilots to communicate with Flight Service
Stations. In most cases, aircraft transmit on 122.1 MHz, and listen
to FSS's reply on the VOR frequency.

>tape also precludes more than about a bi-annual update.
>

Instead of waiting for the callsign server sites to order TAPES(???) at $20 a pop, it seems to me that it would be simpler for us hams just to send a buck or two to anyone willing to acquire the tape and make it ftp accessable. All call server sites could then just ftp it and we would all share the costs and ensure the most up to date online database.

I think many hams like me could not benefit by ordering the tape from Fred, I don't have enough room to store it. Besides, I sorta like using the servers if we can keep them current.

Fred (fred.lloyd@west.sun.com), would you be willing to just make the data ftp-able for everyone if you received enough support ($)? I'd sure contribute to that!! Anyone else interested in this approach let's hear about it.

QST de W1AW
Propagation Forecast Bulletin 29 ARLP029
>From Tad Cook, KT7H, Seattle, WA
July 18, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB PROP ARL ARLP029
ARLP029 Propagation de KT7H

The past week has seen a tremendous increase in the solar flux.
This is a leveling off, and even a partial reversal, of the recent
dramatic drop in solar activity. Solar flux reached a peak of 175.6
on July 13, which was the highest since April 22, 1992 when the
solar flux was 182.7.

The 90 day average of solar flux has been on a decline for some
time. But this month the solar flux rose above the average, which
has been around 130, and has been above the 90 day average since.
The average has leveled off, and now turned up a bit. Of course
this is only temporary. Any reversal toward a triple peak in this
solar cycle is more than doubtful. Soon we should see the solar
cycle turn back down again.

These higher levels of activity have produced higher MUF numbers.
Higher frequencies have had some openings again and even ten meters
has benefited somewhat.

July 13 was also the most disturbed day of the week. The A index
was 22 and the K index was 4 over most of the day.

Over the next week the solar flux is expected to drop as active
areas rotate behind the visible solar disk. Activity should
decrease to a minimum around July 23 and 24 to produce a solar flux
of about 125. Geomagnetic activity could become disruptive again
after July 21, and possibly again around August 8 and 9.

Sunspot Numbers from July 9 through 15 were 160, 172, 201, 215, 153,
180 and 194, with a mean of 182.1. 10.7 cm solar flux for the same
period was 159.6, 170.0, 168.3, 172.0, 175.6, 175.5 and 167.8, with
a mean of 169.8.

Just when you thought it was safe to pack your SAREX equipment away in
the closet, preparations for the next SAREX mission are taking place.
Jay Apt, N5QWL, and Mamoru Mohri, 7L2NJY will operate 2-meter FM from
Space Shuttle "Endeavour" on mission STS-47 currently scheduled for
launch on 11-Sep-92 at 14:23:00 UTC. Mission duration will be 6 days,
and an orbital inclination of 57 degrees will provide SAREX coverage
between latitudes of 70 degrees south, and 70 dgrees north.

N5QWL is the flight engineer for STS-47 and will operate the shuttle
systems during the "night" shift, while 7L2NJY will be one of the
scientists performing experiments in a laboratory in the shuttle's
cargo bay during the "day" shift.

SAREX on STS-47 will use "split" transmit and receive frequencies
depending on mode of operation and sub-satellite point geographical
location. FM voice operation will take place on a downlink frequency
of 145.55 MHz. DO NOT TRANSMIT ON THE DOWNLINK FREQUENCY, 145.55 MHz!
Uplink frequencies will be shared among 144.91, 144.95, and 144.97 MHz
except while over Europe when 144.70, 144.75 and 144.80 MHz will be used.
FM voice contacts will be made using the callsigns N5QWL and 7L2NJY.

Packet radio operations will involve beacon transmissions which will be
updated daily and provide information from N5QWL regarding daily mission
activities. "Robot" operation will allow grounstations to connect to
SAREX and receive a QSO number. The packet radio callsign will be W5RRR-1.
The packet downlink frequency will be the same as that for voice contacts,
145.55 MHz. The single packet uplink frequency will be 144.70 MHz
worldwide.

Successful QSOs on voice will be facilitated by using standard "ICAO"
international phonetics for your callsign. SAREX will NOT answer any

stations using non-standard phonetics. Use your entire callsign.
The astronauts log received transmissions with an audio tape recorder.
Do not use the SAREX callsign. Shuttle passes are very short and the
astronauts want to work as many groundstations as possible.

If possible, decrease your transmitter's deviation to 3 KHz (most are
initially set to 5 KHz) and compensate for the Doppler shift. If this
is not ppossible, wait until a minute or 90 seconds after the shuttle
comes over your horizon to transmit. That will put you within the IF
of the SAREX receiver. If a station transmits without following these
suggestions, the astronauts hear what sounds like a noisy carrier.
This practice applies to both voice and packet.

QSLs will be available directly through N5QWL, 806 Shorewood Drive,
Seabrook, Texas 77586 USA. Include an SASE with your QSL or SWL
report. Stations outside the US should include an SASE with $0.50
of US postage or appropriate IRCs. Include the callsign worked or
heard, Date and time (in UTC), Mode, and Frequency. Packet contacts
should include the QSO number issued by the robot.

N5QWL will be asleep over most USA passes, and 7L2NJY will be busy
with laboratory duties for most US passes, so try packet over the
USA. Remember, the packet callsign is W5RRR-1. The astronauts will
try to work voice when they are not otherwise engaged, and at night or
when the ground is cloudy (they are generally busy taking pictures of the
Earth during clear daylight passes). The orbit will carry Endeavour over
the Northern hemisphere in daylight.

SAREX plans to work 6 schools on this mission. Two in the US, 3 in
Australia, and 1 in Europe or Africa.

No orbital maneuvers are planned after the first 6 hours of the flight,
so orbital elements obtained early in the flight should remain accurate
for the entire flight. If time permits, Jay will activate SAREX about
3 hours into the mission. Deactivation will occur at about 6 days, 8
hours after launch.

The orbiter attitude is planned to be tail down, payload bay south.
The SAREX antenna will be in the right forward window, so most contacts
should have a good antenna pattern from AOS to TCA (time of closest
approach).

* MIR NEWS *
============
The following packet beacon was copied by N6RME on 04-Jul-92 at 04:33:55 UTC:

U8MIR>CQ <UI>:
HAPPY INDEPENDENCE DAY USA TO ALL AMERICANS. CREW OF THE SPACE STATION MIR

Ted, VE7LEE, reports that contrary to what was reported in the 06-Jul-92
issue of SpaceNews, the first full-scale model of Mir was on display
at EXPO 86 during the world's fair that ran from May to October 1986.
This model was also over 14 Metres long.

Alex, U8MIR reports the French Cosmonaut Michel Tognini has obtained
an Amateur Radio license. His callsign onboard Mir will be F5MIR.
His "ANTARES" mission begins on 26-Jul-92.

The Mir cosmonauts reported that their recent EVA was relatively easy
and short, lasting only 2 hours. The EVA was needed to install a
"gyrodyne", which acts like a large gyroscope and rotates the Mir
space station without fuel consumption. There are six gyrodynes in
the KVANT module, and six more in the KVANT-2 module. They are situated
inside the KVANT module, and are outside of the KVANT-2 module.
However the 5 gyrodynes in KVANT-2 have failed. Supplementary gyrodynes
were installed inside KVANT-2. The failure occurred after the launch
of the current Mir crew, who had no experience or training in the
installation of the supplementary gyrodynes. With the help of some
pictures and consultations with specialists at the Space Missions
Control Center, the work was completed in five days, including a day
devoted entirely to EVA preparations.

My current theory is that the old scrotes and scrotesses
that support the infliction of cw upon new ham minds
realize in their dash-and-dotage that they have done nothing
worth remembering; thus they require forcible codal
knowledge from the young to at least *simulate* having
done something worth perpetuating.

Hello Net. I'm the proud owner of a Standard C520 Twin Bander
144/440 Handi.
It will tx/rx 137-170,400/470 Mhz right now.
Are there any hints/kinks/mods/improvements that you know of?
Pse and thank you.r.

>
> My grasp of these facts was questioned by some.

Julian is correct. I am the holder of a UK reciprocal licence (G0/KN4BS)
and I can confirm from all the documentation I have, including the
official UK licence holders rule book that you must have a minimum of
a General class licence to get a reciprocal UK licence.

The reason is probably because, until the recent addition of the UK
no code novice licence there were no UK licences requiring as little
knowledge as the US novice and technician. Both A and B class UK
licences require THE SAME level of technical knowledge because you
must pass an exam roughly equivalent to US Advanced to get either.
The only difference between A & B is the A requires you to pass
a 12 WPM code test based on random 5 digit code groups. The A gives
you all HF privileges equivalent to a US Extra. A and B give you
full privileges on all modes on all VHF/UHF bands on 6 meters and
down (50 MHz and up).

To get a reciprocal licence, call or write the ARRL who keep copies
of application forms for most countries. For the UK your licence will be
limited to (I think) 3 months unless, like me, you can give a permanent
address that can be claimed as you QTH. In that case it lasts a year.

All licences are renewed on an annual basis, its the same for UK
residents and reciprocals, cost is (if I remember right) about 15 UK
pounds. It keeps going up so I might be wrong on that.

I am now grateful to the UK licencing system for their requirements.
Since I go home to visit periodically I wanted to be able to get a
reciprocal licence. It was only the UK requirements which pushed me
to upgrade and learn 13 WPM code so I could get a reciprocal.

Msgid : $RACESBUL.231

TO: ALL EMERGENCY MANAGEMENT AGENCIES/OFFICES VIA THE ARS
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.231 DATE: July 20, 1992
SUBJECT: MGT: Too much of a good thing

More than one professional in the field of Search and Rescue
or Emergency Response Management has been known to say that
"hams can be too much of a good thing." What they refer to is
the propensity of hams to respond en masse to a callout without
regard to their own skills, physical limitations, body
condition, time commitment, and mental state. Over time, these
professionals, often "hams" themselves, reach a state where they
decline to again issue a callout or utilize other hams in their
operations. In essence, they've been "burned" once too often by
the untrained and unskilled responders who think just because
they hold an Amateur Radio license they are natural emergency
operators.
Their experience proves that merely holding a "ham" license
does not an emergency responder make. It takes effort, study
and training to be a good emergency responder. Search and
Rescue teams know that because of their endless training and
drills. They welcome with open arms seriously interested Radio
Amateurs who have the self-discipline to undergo rigorous
training similar to theirs and the committment to stay with the
program.
Think about it. What kind of a potential responder are
you? Are you in the small, but elite, fraternity of those highly
trained and dedicated? Or are you in a larger group of those
with a little training, a little knowledge and fluctuating
interest? Or are you in the largest group that has no training,
no knowledge of emergency communications, but feel you can help
just because you have an Amateur Radio license? Which of these
three groups would you like to have assisting if YOUR family's
life and well being were at stake? ---Cary Mangum, W6WWW

I suspect long-distance patches would be legal, but, speaking as the treasurer of a repeater club, I doubt that many repeater clubs would allow long distance calls, to avoid unexpected phone bills. Many repeater controllers will not allow long distance calls to be made, so the question of legality becomes irrelevant.

In article <1992Jul17.203709.24904@midway.uchicago.edu> gary@midway.uchicago.edu writes:
]In article <7400003@trsvax> rpo@trsvax.tandy.com writes:
]>
]>NEW ITEM ANNOUNCEMENT
]>
]Well, being a scanner person, I'm really disappointed. What we DO want
]is a "handheld 2006" -- we DON'T want the PRO-43

Yes, we do. However, I wouldn't slam Tandy too hard on this - at least
they have finally gone to up-conversion so images go away! Perhaps one
can unlock the CPU and get a wider range - an upconversion radio is
likely to cover a very wide frequency range if unlocked (depending on
front end filters).

]Too few banks. Only a weenie can get along with 200 memory channels.
]400 is ok, 1,000 is better. If you can put in 400, the incremental
]cost of 1,000 is minimal -- give me 1,000 memories.

I don't want 1000 memories unless I can load them from a PC.

]Still no S-meter.
No big deal to me.

]You made cellular 800 Mhz restoration easy in the PRO-2006 (clip one diode
]in a easily located place - a 45 sec mod - includiing opening the case).
]From early reports, cellular restoration in the PRO-42 is difficult and/or
]impossible.
If this is true, it is bad news!

]Given some of the other handheld scanners on the market and their
]"price/performance" or "price/feature", and the length of time
]they have been available (AOR 1000 about 2 years; ICOM R1 2-3 yrs (nonUS))
]the new PRO-43 stands out in my mind as a real turkey and a step
]backwards.
Well, both the AOR 1000 and the ICOM R1 are not exactly wonderful devices.
Their front ends are wide open. The AOR is hard to use, and has various
other deficiencies (scan is slow and jittery, squelch sensitivity varies
with band). It is damned hard to make a tiny, wide-band scanner that
can live in the RF environment of a modern city. Let's not ask too
much. If the PRO-43 will survive in RF that an R1 or AOR 1000 won't,
that would be a good tradeoff.

] 1) wide coverage. No bands. Continuous 500 Khz - 1.3G (or so)
] although 25Mhz-1.2G would be acceptable (like the PRO-2006)

] a) include selectable band pass filtering or preselectors
] b) include a ferrite loop antenna for good AM reception
] on a model that receives down to 500Khz

I only want 25MHz-1.2G. Band pass filtering is too much to ask on a handheld.
If you want a ferrite loop, make it an addon - otherwise it takes too
much space.
]
] 2) Lots of memory with alpha-numeric display. 1,000 memories with
] 8 char alpha-numeric display. So, I can see freq and add my
] own designation as to what it is.
] a) "software" configurable memory banks. Let me choose if
] how many banks and channels/bank I want.
] b) use EEPROMs so I don't need a battey to back memory.
] c) give me a interface to a PC for upload/download.
] (not impossible (pricey) if SHARP and Casio can fo it
] in the Wizard and BOSS
This would all be nice. It would be especially important in a desktop
scanner. Tandy, WAKE UP! A scanner with a lot of channels, such as the 2006,
really needs a computer interface!
]
] 4) PL capability. Both a "search" PL to identify the PL of received
] signals as well as PL to block unwanted transmissions.
PL to block unwanted is not unreasonable. Search PL is asking a bit for
a tiny, handheld device.

816. Re: Copying Code, Alternative Techniques, And The Like

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-18 18:47:17 UTC
From: davros@ccwf.cc.utexas.edu
Message-ID: <76138@ut-emx.uucp>
Source record: 287197

Seems that people, in their willingness to promote an exemption that the guy in question, being a codeless Tech, can't take anyway until he passes 5 WPM, are forgetting something that seems to me quite obvious and also important.

The disabled have, for years, found new and different ways to do things--all kinds of things--including copying the code, and sending the code. If your friend has trouble hearing tones, well then, ... if you look in the rules, it says that a person can have alternative testing arrangements for that test, i.e. a vibrating speaker or other device to copy code through, or a flashing light, or something along those lines. Why not give it a go? If your friend wants to upgrade, then there is a way. If your friend is happy where he is, that is fine too. There is room for everyone and everyone's interests here. And no one should give him grief because he chose to get his codeless license. It's here; whether ya like it or not, it is, it is legal, and should be used. The ops who have them are, as a general rule, just as good, or bad, as any op who got his code requirement way-back-when.

The point is that with some enginuity (or is it ingenuity?) things can be done thought impossible because a body doesn't possess the conventional means by which it is done.

NOTES:

Dist. 3 Group A calls have advanced to the AA prefix series.

Guam Group A calls have advanced to the NH prefix series.

Dist. 4 Group B calls have advanced to the KQ prefix.

Dist. 0 Group B calls will soon advance to the KG prefix series.

Dist. 7 will soon join Dists. 4, 5 and 6 with depleted Group C calls.

Several factors lately have made me concider retiring this call sign list. Among them:

-W1AW puts out its own version of this list, tho seems to come out a few days after mine. I only rarely see it at this BBS for some reason and I look for it each month.

-I've received sysop complaints that my list slows the packet flow, since W1AW also does it. (I've been doing this on packet much longer than W1AW, folks).

-It is my firm belief that some sysops edit out my list. I get complaints from hams like, where's your list, I haven't seen it in months.... my routing is no different, so why are some not seeing the list? I also have evidence that some of my personal packets have been chopped up, and there was nothing wrong with them. I think there are those few sysops who sit at their almighty keyboard and play God with whatever they don't like. I could fill your buffer on this one folks so I'll stop there.

Please respond to these questions to help me determine to continue with this list or not:

1 Do you regularly see the W1AW call sign list?

2 Do you think I should continue with this list? Why?

3 Does mine come through regularly on your home bbs or only occasionally?

4 Do you see other individuals producing their own call sign list?
.
I have always enjoyed doing this and have received many, many favorable
comments from hams who look foward each month to it. For many it is the
fastest list seen, short of calling the FCC, to help determine when to put in
for a call change. But if W1AW's list is dependable, perhaps there is no need
for mine. I will put out next month's list. Let me know what you think.
Thanks.

73 till next month...
----- End of message 47853 from WB1E @ K1RQG. -----

For those without packet access, forward your replies to me and
I will get them to WB1E.

I have found on most autopatches, all you have to do is key your
transmitter to cut off the audio of the telephone line, so you
can eliminate the "on hold" music simply by transmitting. [Sampling
every few seconds to see if the music is gone.]

SB DX @ ALLBBS $RTDX0717
RTTY DX Notes 17 July
RTTY DX Notes for week ending 17 July, 1992 (BID RTDX0717)

Band conditions have been variable for the past week, though some good
DX was noted. But it appears that we have a new problem on our hands.
A thing called 'Band Plan'. Why is RTTY and Amtor called 'Narrow
Band' modes whe it is wider than CW, and almost as wide as SSB,
strange? And why, suddenly, should it be confined to a very small
portion of the Amateur bands? Years ago, gentlemen were left to their
own devices, and we worked things out amicably. Now it seems that
someone must herd un into little pens like sheep. Times have sure
changed.

Our thanks this week go to I5FLN, IK5AAX, NT3B, SM5EIT, TG9VT, VK2EG,
VP8CKB, W2JGR and the Twin Cities DX packet cluster network, WB2CJL,
and ZL2AAV. Thank you all for your comments and information, it all
makes life easier.

Notes of interest.

4K5ZI is operating from Snake Island in the Black Sea. They will be there until July 25th. Cards for this operation are not yet accepted for credit at the DXCC desk, but maybe later.

Jim Smith (VK9NS) has completed his operation on Wake Island (KH9) and should be QRV from Central Kiribati (T31) in the near future. QSL to VK9NS.

An error has appeared with the QSL manager for VP8CKB. The correct callsign of the manager is K1IED, not K1EID as listed in some DX news. The addresss of K1IED is Larry F. Skilton, 72 Brook St, South Windsor, CT 06074

There has been a delay in the printing of the QSL cards for the VP8SSI and VP8CBA operation, but this has now been overcome and the cards should be in the mail very soon, if not immediately.

FR5ZU, Jack, says that he will be QRV from Glorioso FR5/G, Europa FT5/E and Juan De Nova FR5/J during September with noises from his RTTY machine.

GL DE DX1 (VK2SG)

Forward RTTY DX news tips to VK2SG @ VK2AGE.NSW.AUS.OC

POTENTIAL MAJOR SOLAR FLARE WARNING

UPDATED: 23:45 UT, 18 JULY

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGIONS 7220-7222 (S11W78@19/00Z)

```
-------------------------------------------------------------------------
| ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS |
|-----------------------------------------------------------------------|
| DAYS | C5.0 | M1.0 | M5.0 | X1.0 | X5.0 | >X12.0 |
|------|----------|----------|----------|----------|----------|------------|
|1( )P | 95 % | 40 % | 20 % | 5 % | 0 % | 0 % |
|3(-)P | 95 % | 50 % | 25 % | 10 % | 1 % | 0 % |
|5(-) | WLT | WLT | WLT | WLT | WLT | WLT |
|7(-) | WLT | WLT | WLT | WLT | WLT | WLT |
-------------------------------------------------------------------------
```

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

The threat for possible major flare activity from Regions 7220 and 7222 will diminish as the spot groups cross the west limb over the next 48 hours. These groups continued to produce minor flare activity over the last 24 hours and still pose a slight threat for another major flare over the next 48 to possibly 72 hours. Gradual decay is anticipated as these regions traverse the far side of the sun.

This warning will remain active until 21 July. It will be allowed to expire at that time.

823. Buckmaster Publishing Company Microfiche... Hamradio Magazine...

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-18 23:55:48 UTC
From: chuck@eng.umd.edu
Message-ID: <1992Jul18.235548.26022@eng.umd.edu>
Source record: 287203

Hi,
Earlier, I posted an article about a fading problem I had with
Buckmaster Publishing companies Microfiche....Well, I violated one of my
only firm rules, and posted before I had checked out all of the facts. Towit,
I had only one or two fiche that were bad, not the whole set.

I contacted John Buckmaster the owner of the company, and he said that
they haven't had any reported problems with fading, and that since the fiche
was a dry process, there is no way that it was due to improper washing or
fixing. He further indicated that the fiche should last virtually forever.
Since most of his customers are libraries, they would certainly be upset with
anything less.

He offered to replace, at no charge, any and all fiche made by
his company that are defective! I can't ask for any more than that.

Anyway, to summarize:

1) Only 2 fiche sheets are bad (They probably were bad all along)
2) They offered to replace them
3) I am happy with the product
4) I have canceled my original article
5) I am embarrased :-(

Hi,
I am looking for any and all information on a Frederick Electronics MCM-680. This instrument is a Morse code modem, and it is capable of operating from 0-300wpm. Beyond that I know very little about it. If you know how it works, how well, how to hook it up, etc. I would like to hear from you.

Thanks,

Chuck Harris - WA3UQV

825. Re: Larson glass mount antenna has high SWR

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-19 05:10:05 UTC
From: michaeln@hpcvnb.CV.HP.COM
Message-ID: <61250009@hpcvnb.CV.HP.COM>
Source record: 287211

Hi there,
Well,
Some people have found that it depends on the kind of glass used in the windows. It seems some windows are coated and the adheasive doesn't want to stick. Other windows seem to have more lead or other materials in them and makes the antenna resonant at a different frequency so you have to do a little cutting. Since the swr is lowest at the bottom of the band then the antenna is too long. But before you start cutting make sure your using a swr bridge that is built/accurate at 2 meters. Some bridges made for hf are and others are not. Either use one thats made for vhf or one thats be checked against one for vhf and checks out okay.
As to the larson pre-cut window mount. a friend of mine was having trouble with his and took it up to the factory and the cut it for him. I think it was in a VW of some kind and had to be shortened quite a bit.
Good luck. 73's Mike Nason KA7HBB
PS. We only live about 80 miles from the factory here. Nice

Beeee

Does this mean because he is an "EXTRA" that gives him right to say that medical reasons are "Lame" ones for not learning the code?

>>A simple net.trip to the callsign server discredits most of your ad hominem
>>blatherings, but does not excuse the simple fact that NEVER once do you
>>address his factual arguments. For decades, the tone deaf have passed
>>the code requirement. Now, if this guy had other problems, well, that's
>>what the exception is for. But, if that was your point, then why didn't
>>you mention it in the first place? Noooo, too easy to slap someone with
>>a Political Incorrectness label.

A trip to the same callsign server shows me a few things too - >
(1). It is VERY outdated and incorrect!
(2). The only thing correct in the callsign server is my age -->36 and my Callsign. How strange it is that people *DO* upgrade real fast, eh?

I openly mentioned the fact that the person in question "had medical problems and can't hear tones." Notice the key word, "AND", meaning more than one problem. Now, what about my "Blatherings"?

Oh how alert you are!

> Now Alan, please stick it with your unthought ideas...

...and in the future, please pipe your ad hom effluent to /dev/null.

Could you tell me what "ad hom effluent" means? I am just a plain old earthling, myself.

...and in the future, please pipe your ad hom effluent to /dev/null.

>| N5UYH/Advanced |

>>PS -- Happy first license anniversary.

Never made it one year under that class... Sorry to inform you different. In fact never made it one year with General and doubt very seriously I will be Advanced class one year before upgrading to Extra class. Sorry to burst bubble.

+Flame Off+

You have a nice day, Paul. I don't get riled when people flame me, I DO get riled when people flame disabled people. That is how I feel about the previous post from the other fellow. I hope you have had your fun on the net. Glad I made your day...

I agree with your sentiments but my experience has been that whenever
we ask the FCC to get involved we generally don't like what we get.
After a lot of years in the hobby, I advocate the "self policing"
policy. Granted, there is not much we can do about the rude idiots
on the air expcept ignore them but if we ask for enforcement, I'm
afraid the FCC might just say "The whole (amateur) service is more
trouble than it is worth".

A quick anecdote from my own past regarding a "word slip"... I've
generally been a push to talk operator rather than 'vox'. Well,
one field day (very early in the morning), something seemed wrong
with the antenna and without thinking, I turned to the logger
and said "what the **** is wrong with this antenna".... you guessed
it! The vox kicked in and every single word was transmitted with
GREAT clarity. Most of the comment I got back were, "Nothing, you're
comming through S-9". Well, it did get a few more contacts!

(Mike White) m14494@mwvm.mitre.org says:

"Yes, but the CW vs. no-CW debate is also an old one. It comes down to
this: some folks are upset that they can't use some sub-bands without
learning higher speed morse. Their argument seems to be:
'I don't use CW, so I shouldn't have to learn it?'
Well, I don't use digital modes, so why should ..."

If cw were just "part of the exam," then I would agree with you.
You can choose to ignore any particular segment of the written
and still pass the 70% grade.

But cw is separate and *required*.

What the issue _really_ boils down to is:

I don't stick it to you with my modem, so
don't stick it to me with your key.

>There is a hamfest in town next weekend and I am considering buying one or two
>crystal 2m mobile rigs. I think this type of rig would be acceptable in one of
>my cars and in my house. In both cases, I only need 3 repeater frequencies and
>maybe one simplex frequency. Room for growth (a few more frequencies) would be
>nice. I don't need PL tones and I could use my HT to generate the DMTF tones.
>I wouldn't complain if the radio had PL tones or DTMF. Obivously I am hoping
>to pick up such a rig very cheap.
>
>1 - Are there any specific models that someone could recommend? Or should I
>look for just about anything?

There are abominations like the HR-2B that should be avoided like the plague,
and there are fairly nice little radios like the IC-22A. But see below.

>2 - What should I do to ensure that the radio works and is in resonable
>condition?

Don't buy it unless the seller will demonstrate that it works or will let
you take it to the test table for evaluation.

>3 - What about crystals? Are they easy to find for some or all radios? What
>do they cost?

Crystals are available, but they will run you $20 a channel pair. That
gets expensive in a hurry. By the time you buy a decent rig in the $60
to $90 price range and add 3 sets of crystals, you'll have enough in it
to have purchased a good used synthesized rig.

>4 - What type of rf power output can I expect find in this type of radio? I
>would like to get at least 25 watts.

Many of these radios ran 10 watts and had no overload protection. Some
don't have a very clean output spectrum or very good noise figure.

>5 - What is a reasonable price range for this type of radio or for specific
>models?

Depending on model, they can run from free to about $90. Certain Motorola
and GE commercial grade radios can command even more. Aside from the
commercial radios which are in demand for repeater service, most of the
amateur grade crystal rigs are very obsolete in design and aren't cost
effective if you need more than a couple of channel pairs.

QST de W1AW
ARRL Bulletin 68 ARLB068
>From ARRL Headquarters
Newington CT July 19, 1992
To all radio amateurs

The ARRL Board of Directors met in Rocky Hill, Connecticut, July 17
and 18, 1992. The following is a summary of the meeting highlights:

Responding to a Digital Committee recommendation, and membership
input on the question, the Board directed that a petition for
rulemaking be drafted for filing with the FCC to effect
semiautomatic, unattended digital operation on the HF bands. The
petition is to be reviewed by the Executive Committee before filing.

The Board deferred further consideration of changing the name of the
organization until the 1993 Annual Meeting so that the full
rationale for the proposal can be shared with the membership.

A national alert DTMF tone standard was adopted in response to a
Public Service Advisory Committee recommendation.

Abdul Jabbar Marafi, 9K2DZ, was selected as the recipient of the
ARRL International Humanitarian Award for 1991 for his work as the
''Last Voice From Kuwait.''

Patricia Hensley, N4ROS, was selected as the ARRL Professional
Instructor of the Year for 1991. Thomas Hammond, N0SS, is Herb S.
Brier Instructor of the Year.

James F. Heil, KB5AWM, was picked as the inaugural recipient of the
Philip J. McGan Silver Antenna Award in recognition of his public
relations efforts on behalf of Amateur Radio.

The 1991 Technical Excellence Award went jointly to Roy Lewallen
W7EL, Rick Campbell, KK7B and Bruce Hale, KB1MW.

The ARRL will cast votes supporting admission of the Chinese Taipei
Amateur Radio League, Zveza Radioamaterjev Slovenije (Slovenia) and
the Hrvatski Radio-Amaterski Savez (Croatia) into the IARU.
```

ARRL staff was directed to more effectively promote family membership to licensed spouses and children of ARRL members.

A Field Organization Volunteer of the Year Award was created to be administered at the Division level.

An ARRL Industry Advisory Council was created in response to a Long Range Planning Committee recommendation.

The Board encouraged Section Managers to appoint Assistants to promote youth activities in their sections.

The Board authorized a new ''official family'' style callsign badge for Life Members.

A full report on the ARRL Board of Directors meeting will appear in September QST.

Source record: 287218

Stop your whinging already. This is getting old. If you don't like it, don't buy it. That's how you tell a company if it's good or not. So I guess if the RS PRO-43 *did* have continuous coverage, you would go out immediately and buy it, huh? Why don't you all just buy the Icom R-1 and chill out. Maybe if you have the technical know-how to build a scanner that receives every damn man-made RF signal, you can make one yourself. Most of the bands that are "cut out" are of little or no interest anyway. You want to listen to broadcast stations, get a stereo or TV. Do you really scan the TV channels. That would be nice if I could set it up so my scanner would only stop on a radio station or TV station when my favorite song was being played or some big news was being made public. As far as receiving news, I listen to the emergency freqs so I know what's happening before the news crews get off their butts to run to the scene. What else are you missing. Pagers in 75 MHz band. Tragic sob story. If you want to listen to pagers or remote control cars and planes, you don't need to be spending your money on a scanner; you need professional help. It's interesting to note that when a company produces something that doesn't do every single thing they want, they gripe to high heaven about it. How many times do you see people praise a product that they are really happy about. I don't like spinach - you don't hear me gripe about it every day, do you? If you don't like something, don't eat it.

838. Question: SENT/REC'D columns in ARRL log book?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-19 23:47:03 UTC
From: harcke@hawkeye.synthesis.cornell.EDU
Message-ID: <9207192346.AA00518@hawkeye.synthesis.cornell.edu.synthesis>
Source record: 287221

I've recently become confused over the RST SENT/REC'D columns in the ARRL log book. I'm not sure which column stands for "how my signal sounds" (my RST) and which stands for "how his/her signal sounds" (his RST).

Which column is which? The choices are:

1) SENT = his RST
REC'D = my RST

2) SENT = my RST
REC'D = his RST

I've been going by system #1, but someone recently told me system #2 is the correct way.

Thanks in advance,

SB SAT @ AMSAT $ANS-200.01
STS-47 INFORMATION: PART I

HR AMSAT NEWS SERVICE BULLETIN 200.01 FROM AMSAT HQ
SILVER SPRING, MD JULY 18, 1992 BID:$ANS-200.01
TO ALL RADIO AMATEURS BT

N5QWL Provides STS-47/SAREX Information: Part I

Shuttle Amateur Radio Experiment (SAREX) Fact Sheet

STS-47 Space Shuttle Endeavour

When: Mid-September, 1992 for 6 days of 2M Operations.

Where: Earth Orbit. Altitude 300 KM, with radio coverage of
latitudes from 70 degrees North to 70 degrees South.

Operators: Dr. Jay Apt N5QWL and Dr. Mamoru Mohri 7L2NJY.
N5QWL is the flight engineer for STS-47 and will operate the
shuttle systems during the "night" shift, while 7L2NJY will be
one of the scientists performing experiments in a laboratory
in the shuttle's cargo bay during the "day" shift.

Modes: FM Voice
VOICE CALL SIGNS: N5QWL and 7L2NJY

Packet (Beacons giving daily mission activities by N5QWL daily
if he gets a chance, and robot QSOs - successful connects
will be issued a contact number by the robot)
PACKET CALL SIGN: W5RRR-1

Frequencies: We will operate split. PLEASE DO NOT TRANSMIT ON THE
DOWNLINK FREQUENCY!

VOICE: Downlink (shuttle transmits) on 145.55 MHz
Uplink (ground transmits) on 144.95, 144.91, 144.97 MHz
(except over Europe) - we'll listen on those 3
frequencies to spread out the pileup a bit.
Uplink for Europe only: 144.80, 144.75, 144.70 MHz

Successful QSOs on voice will be facilitated by using
standard international phonetics for your call sign. We
will not answer any stations using non-standard
phonetics. Use your entire call sign - we log with an
audio tape recorder. Do not use our call sign - passes
are very short, and we want to work as many folks as
possible.

[The AMSAT News Service (ANS) would like to thank N5QWL for this bulletin item. Please stay tunned for more more STS-47 SAREX information from the ANS.]

SB SAT @ AMSAT $ANS-200.02
STS-47 INFORMATION: PART II

HR AMSAT NEWS SERVICE BULLETIN 200.02 FROM AMSAT HQ
SILVER SPRING, MD JULY 18, 1992 BID:$ANS-200.02
TO ALL RADIO AMATEURS BT

N5QWL Provides STS-47/SAREX Information: Part II

PACKET: Downlink (shuttle transmits) on 145.55
Uplink (ground transmits) on 144.70 (worldwide)

If you can, decrease your radio's deviation to 3 KHz (most are initially set at 5 KHz) and compensate for the Doppler shift. If you cannot, wait until a minute or 90 seconds after we come over your horizon to transmit - that will put you within our IF. If a station transmits without following these suggestions, we just hear what sounds like a noisy carrier. The above applies to both voice and packet.

QSL via: N5QWL, 806 Shorewood Drive, Seabrook, Texas 77586 USA

Include a self-addressed stamped envelope (SASE).

Non-US stations include a self addressed envelope with $0.50 of US postage affixed or appropriate IRCs.

Include the Callsign worked, Date, UTC, Mode, and Frequency.
For packet contacts, include the QSO number issued by the robot.

SWL QSL's: Include the Callsign heard, Date, UTC, Mode, and Frequency.

Information Sources During The Mission:

AMSAT News Service (ANS) bulletins, Compuserve, Genie, Prodigy, local packet bulletin boards, ARRL bulletins, and HF voice from NASA Johnson Space Center ARC, Houston, Texas, W5RRR, or NASA Goddard Spaceflight Center ARC, Greenbelt, Maryland, WA3NAN, frequencies listed below.

W5RRR may be found on or near: 7.215, 14.280, 21.360, and 28.400 MHz. WA3NAN retransmits NASA Select Audio and SAREX bulletins simultaneously on or near 3.860, 7.185, 14.295, 21.395, and 28.650 MHz.

The NASA Info BBS at Johnson Space Center, Houston, will also carry Keplerian elements and SAREX bulletins. (713) 483-2500, 1200 baud, 8-N-1. At the ENTER NUMBER: prompt, type 62511 <return and log onto the BBS. The Keps and bulletins will be in the welcome message. Disconnect rapidly to facilitate access by others.

[The AMSAT News Service (ANS) would like to thank N5QWL for this bulletin item. Please stay tunned for more more STS-47 SAREX information from the ANS.]

STS-47 INFORMATION: PART III

HR AMSAT NEWS SERVICE BULLETIN 200.03 FROM AMSAT HQ
SILVER SPRING, MD JULY 18, 1992 BID:$ANS-200.03
TO ALL RADIO AMATEURS BT

N5QWL Provides STS-47/SAREX Information: Part III

Operations Notes:

N5QWL will be asleep over most USA passes, and 7L2NJY will be busy with laboratory duties for most US passes, so try us on packet over the USA. Remember, our packet call sign is W5RRR-1. We'll try to work voice (1) when we are not otherwise engaged, and (2) at night or when the ground is cloudy (we are generally busy taking pictures of the Earth during clear daylight passes). Our orbit will carry us over the Northern hemisphere in daylight.

We plan to work 6 schools on this mission: 2 in the US, 3 in Australia, and 1 in Europe or Africa.

We do not plan any orbiter maneuvers after the first 6 hours of the flight, so orbital elements obtained early in the flight ought to be pretty good for the entire flight. If I can get to it, I'll activate the SAREX about 3 hours into the mission; deactivation will occur at about 6 days, 8 hours after launch.

The orbiter attitude is planned to be tail down, payload bay south. The SAREX antenna will be in the right forward window, so most contacts should have a good antenna pattern from AOS to TCA (time of closest approach).

2) SENT = my RST
REC'D = his RST

>I've been going by system #1, but someone recently told me system #2
>is the correct way.

I'd say that you should do whatever you want so long as you know just
what it is. In any case, your alternatives are equally confusing.
What do you mean by "his RST" - the one he sends you or the strength
of his signals? Perhaps there is a logic net you can ask...

I'd never really thought about this deep question, but under "sent"
I put the RST that I sent the other person, describing his signal
strength as estimated by me. Usually 599. Under "recvd" I put the
RST that I received from him (meaning what I hear him say to me about
the strength of the signals he hears that I sent him...). Usually 599.

Fortunately, it is unlikely that the ARRL will send round a Log Entry
Standardization Enforcement Officer to check on you. If they do, I am
going to be in deep trouble because - I have to admit this - I put names
under where it says QTH and QTH where it says name. I know, I'm ashamed,
but I just can't help myself and I feel better for admitting it in public.

I am the sort of person who is confused by signs that say "No Entrance"
on the inside of supermarket doors - if it's not for an entrance, it must
be for an exit, right? But no, it really means "No Exit". It's hard to
remember that exiting the supermarket is really entering the outside.

It's good to have something important to discuss for a change, This could
even lead to debate over why people tell you that you are Q5 on phone and
then send you a QSL card that only has an R and S column and no Q. Is it
because QST is used for something else? Are you R5 or Q5? (R5 is also
taken by Cushcraft, but this is getting very silly and I'm going away now).

845. WANTED: Custom Up-Converter (4.5 to 41.25 mHz).

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 06:25:13 UTC
From: gutierre@nsipo.nasa.gov
Message-ID: <1992Jul20.062513.26932@news.arc.nasa.gov>
Source record: 287223

Hello there,

I am looking for a company (or an individual) who can and is willing
to make a custom up-converter for me.

Any leads or volunteers would be much appreciated!!!

PLEASE reply via e-mail ONLY at <gutierre@nsipo.nasa.gov>, as I do
not normally read r.r.a.misc.

Thanks in advance.

Robert Gutierrez/NASA Science Internet Network Operations.

846. HELP! How do I get this vertical up in the air?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 06:26:47 UTC
From: mont@netcom.com
Message-ID: <wgcmfvq.mont@netcom.com>
Source record: 287227

I've got a 25' vertical on a 28' mast, total length 52' and I plan on raising it single handedly (because I'd want too). Here's how I plan to do it, your comments and suggestion will be appreciated:

The mast will be anchored to the ground next to the house where the peak of the roof is the highest (about 12').

I plan on attaching a 20' 2x4 vertically to the house. At the top of the 2x4 will be a pulley for a rope to pull the antenna up. About 5' down from the top I'll attach another 2x4 going down to the ground on an angle as a brace.

The base of the antenna mast will be anchored while the antenna is laying on the ground. Next the rope going through the pulley will be attached to the mast 20' up from the anchored end.

When I start to lift the antenna I'm not sure of how to keep it from swinging from side to side. I will wait for a day when the wind is real real calm.

The mast will be attached to the roof at the 12' height. The 18 radials at the base of the antenna will act as guys at the 28' height. Nylon rope will be attached to the antenna just above the 40m trap for guys, this antenna is a 5-BTV Hustler and the 80m resonator at the top is pretty heavy.

I planning on securing the antenna in the following order,
Raise the antenna with the rope and tie it off
Spread out and secure 3 of the radials
Secure the mast to the roof
Secure the nylon rope guys
Remove the 2x4 (or maybe I should leave it till I check the swr)
Spread out and secure the rest of the radials.

Well, will this work? Or, do you think I'm crazy?

If this seems to be workable, how would it work if I added another 10' to the mast (and another set of guys)? Would I also need to extend the upright 2x4 another 10' or will the pulley at 20' still be sufficient to raise the 62' mast and antenna?

All suggestions and criticisms will be appreciated. THANKS in advance.

73,

852. DX Bulletin #70 July 20, 1992

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 12:21:03 UTC
From: skitch@nadc.navy.mil
Message-ID: <9207201217.AA23146@NADC.NADC.NAVY.MIL>
Source record: 287234

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 070 (OPDX.070)
July 20, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, ARRL, DXNL, DF4RD, WB3LHD, K4CEF & Southeastern Cluster Group, W4DVJ, W8BE, KF8VW and K8YVI for the following DX information.

9L, SIERRA LEONE. Rumor is circulating that the government of Sierra Leone has curtailed all amateur radio activites and has confiscated all the amateur radio equipment they can find. Apparently, this happened a couple of weeks ago and word is just now getting around. There will be more information as we hear it. (This information is from W4DVJ.)

9M6, EAST MALAYSIA. Both G4CVI and G4CCZ are supposed to be active from here as 9M6SMC, but no spots have been reported on the Ohio/Penn Network. From Sabah, they are to be active on all bands including the WARC bands. Activity will last until August 8, but G4CVI will leave a week early while Paul, G4CCZ, will stay on to finish operating. Paul then plans to go to Brunei to operate for a couple of days (August 9 and 10).

DA1WA/P SPECIAL EVENT STATION. Be looking for this station from July 31 to August 2. It will be operating from Frankenstein's Castle located near Darmstadt, Germany. Activity will be on 80-10 meters, CW/SSB and digital modes. A special QSL card will be available for one U.S. green stamp or 2 to 3 IRCs (listen for details). QSL to Rob Kipp (DJ0PU), Huegelstr 25, D-W-6070 Langen, Germany.

DK6NP'S SUMMER HOLIDAY OR PACIFIC DXPEDITION? Peter, DK6NP, will spending his summer holiday in Fiji, Tonga and Western Samoa from August 1-26. He will use the callsigns of A35NP, 5W1NP and probably 3D2NP (3D2 license has not been issued yet.) Peter will be on the main islands of these countries, but he will also try to activate some rare islands off the main island. From August 13-18 he will be on Lifuka Island in the Haapai group in Tonga. This island has not been assigned an IOTA number yet. Peter mentions he may be active from Yasawa Islands (OC-156) in the Fiji group from August 3-6. He will be visiting several of the islands in that group during that time frame. Peter states, "This is my summer holiday and not a DXpedition."

HA5BUS GROUP. Leon, K2EWB, was heard saying the HA5BUS people are still in Malaysia and waiting for the go ahead to move on to their next

location. The EP/HA5BUS and S2/HA5BUS QSL cards are being printed in Germany and will be sent to Budapest where a big group will sort them out. Nothing is expected to be sent out for at least another month.

KH2, GUAM. Ken, W2IMO, has been a quite active on 20 meters SSB/CW this past week signing W2IMO/KH2. He has no specific frequency that he operates on, but activity seems to be between 1100 to 1200z. Also, European sources report activty on 15 meters, but no spots have been seen on the Ohio/Penn Network. Ken will be QRV until August. QSLs go to WB2OQY. David, KE2PF, who is also signing /KH2, will be active for the next two years. At this time, OPDX does not have QSNs to report on KE2PF/KH2.

HD8, GALAPAGOS ISLANDS. John, TG9VT, informs OPDX that last week's bulletin (OPDX.069) had an error. It concerns HD8VO. The operator of HP1XPN was incorrect and should have been George Wesley, KB2VO. QSL to KB2VO CBA.

KH3, JOHNSTON ISLAND. KH3AE and KH3AF will try to be active from Sand Island every weekend between now and December. KH3AE was heard on 18142 kHz around 0614z. They hope to use the big LORAN towers to build LF arrays and they promised to check 160 meters at 0200z, 0400z and 0500z daily during each trip.

OD, LEBANON. Hani, N3IWM, will be going to Tripoli from July 20 thru August 30 and will sign OD5RH. Activity will be on CW and SSB. QSL via N3IWM.

S2, BANGLADESH. Denny, GW3CDP, was heard saying Erik, WZ6C, was on his way back to Bangladesh and got as far as Alaska, but had to return home because of plane trouble. Erik was reported fine and is on his way again. If all goes well Erik should be back in S2-land by July 17. Word has it that Erik should have his licences waiting for him when he arrives. It was also reported that John, W4FRU, was heard telling Denny on the 21335 DX net, that he received a FAX from S21A. The FAX stated that S21A was assembling a beam and would be QRV in the next few days. Also, S21B is waiting to receive his equipment and should be QRV shortly.
UPDATE 7/17: S21A was reported on 21297 kHz 1830z with Erik.
UPDATE 7/18: John, W4FRU, announced to GW3CDP that he would be the QSL Manager for both S21A, S21B and S2/WZ6C. Also, S21A showed up on the 14256 DX net arouond 0015z.

TN, CONGO. Andre, TN1AT, who is active from here shows up every first and third Saturday of the month on the 14256 DX net at 2100z. He showed up this past Saturday (July 18) and the report was that the pile up was horrendous. About 50 stations were able to work him. Be looking for Andre again on August 1st at 2100z on 14256 kHz. QSL via F6FNU.

XU, KAMPUCHEA. Patrick, F6IRF, was fairly active as XU8CW this past weekend with few takers on 15 meters. He was also active on 18133 and 18076 kHz from 1430 to 1500z. He will be QRV until August 31st. QSL via FD1GTR.

FROM THE ARRL..... The DXCC announced this week that the recent FO0CI operation from Clipperton Island has been accredited for DXCC purposes. ..... There is a correction to ARRL DX Bulletin (7/10/92): QSLs for VP8CBK, should go to K1IED and not to K1EID as mentioned in the bulletin.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

In article <32920098@hpspdla.spd.HP.COM> paulz@hpspdla.spd.HP.COM (Paul Zander) writes:
>During Field Day in W6 land, there are always some activity on 2 meter
>simplex. Some clubs have a 2 meter station for the entire contest
>period. Most of the others use that band as an alternate when the HF
>ops need a break, or the equipment needs attention. At times, the pile
>ups can sound like more like 20 meters!

Trey Garlough, WN4KKN, asked why FD groups in sparsely populated Sections are at a disadvantage compared to groups in more heavily populated areas. Unfortunately, his article expired before I could reply...anyway, the comment above is part of the reason I proposed the idea. The full reasoning goes as follows:

1. Assume the percentage of hams among the general population is uniform throughout North America and that the percentage of hams participating in Field Day is similarly uniform.

2. Then it follows that FD groups in more densely populated areas have more of an opportunity to participate in short-range VHF and HF (when the bands go south) than those groups in more remote locations. After all, if all same-mode QSO's count the same number of points, why bother to dig out the weak ones?

3. You'd think, though, that by Sunday morning most groups would have worked all the locals and would be looking for distant stations. My experience in KH6 doesn't tend to prove this out, however.

Of course, all this begs the question of the real purpose of FD, as I stated earlier...

SpaceNews
=========

MONDAY JULY 6, 1992

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* SAREX NEWS *
==============
Roy Neal, K6DUE, Chairman of the SAREX Working Group reports that
all unscheduled contacts with the STS-50 SAREX experiment are now
taking place on a frequency of 144.450 MHz simplex. WB6LLO reported
receiving slow-scan television (SSTV) images from orbiter Columbia
on July 2nd. Reception was "closed circuit" on a morning pass over
San Diego, California. The image showed the shuttle's tail and a
cloudy Earth below in the background. Dick Richards has had some
limited success in contacting hams on the Earth below.

Stay tuned to 144.450 MHz for more video, packet, and voice transmissions
from STS-50 and the space shuttle Columbia.

* MIR NEWS *
============
The Man and His World Exhibition has opened in the Tel-Aviv fairgrounds
and the main attraction is the Russian Space Pavillion, where for the first
time outside of the ex-USSR a full size replica of MIR is on display with
3 cosmonauts on hand. The following bulletin from 4X4LF came out a few
weeks ago:

A 14-Metre long module from the space station MIR will be the main feature
of the Russian space exhibit at the "Man and His World" exhibition, opening
in Tel-Aviv next month. In addition to this module, several of which are
connected together to form the space station, other exhibits will demonstrate
all aspects of life in space. "Several Russian Cosmonauts will be at the
exhibit, each one for a period of about 10 days. Among them will be Sergei
Krikaylev, U5MIR, who was very active on Amateur Radio (both voice and packet)
during his 10 month sojourn on MIR (May '91 to March '92).

The IARC (Israel Amateur Radio Club) has invited Sergei Samburov, RV3DR, to operate a ham station from the exhibit, for the purpose of contacting MIR during it's passes over Israel. We will also discuss Amateur Radio operations during the planned flight of an Israeli Cosmonaut on MIR. Sergei is the grandson of Konstantin Tsiolkovsky, who formulated the theoretical foundations of space travel at the turn of the century. He is employed by NPO "Energiya", the Russian Space Agency, and is in charge of the Amateur Radio program and Cosmonaut training.

The exhibit will be in pavilion 27 at the Tel-Aviv Fair Grounds. The opening date for groups is June 8, and for the general public June 18. The fair will continue until August 31.

|>Some years ago, there were often PA designs using various forms
|>of FET in the literature. At the present time only designs using
|>bipolar transistors are found there. Can anybody explaim me why ?
|>
|>Thanks
|>Claude
|>DJ0OT

Here's my guess:

1. FET designs are nice because FETs are easier to deal with (easier matching) and they have no thermal stability problems. So if you can afford that approach, it's a good one.

2. FETs are significantly more expensive for a given power level and there aren't a lot of choices.

#1 would explain the original articles. #2 might explain why you haven't seen more of them. (By the way, the ones I saw about FETs were written by someone who works at Motorola -- one of the companies that makes suitable FETs.)

None of the articles I have seen talk about the power supply, nor do they give a credible discussion of how to do the heat sinks. Both of these seem to be harder problems than the amplifier itself.

This whole discussion is really kinda interesting. I in fact mentioned quite a few of these to the buyer. The bottom line is...what do you want as a bottom line? We have to balance price/feature, and adding all of the suggested features would make an excellent, $1500 handheld. Ok, maybe only $1000...but still we have to look at selling enough units to make a product worthwhile to carry.

As far as the cellular lockout...at least three times in the last 5 years there have been serious efforts in Congress to make any scanner that can monitor cellular illegal. A couple of the bills came quite close to passing. Now, we have over 7000 stores, and each store usually gets at least 2 of every new item. If such a bill passed, how would you like to be stuck with over 14,000 pieces of merchandise that you could not sell? Perhaps ACE or other companies that only have to deal in stock numbering in the tens or hundreds can take that risk...more power to 'em.

Meanwhile, the PRO-43 is the best handheld we have ever had. If you look around hard enough, you will probably find someone who knows what those oft-desired mods are.

Paul Opitz ... N5TPQ

I had a similar problem with an ASP glass mount. The solution was to change
the length of the co-ax. (I added a 2' co-ax jumper I had around the shack).

Locally the news people are onsite before the cops, unless
the emergency is at a donut shop, but...

I saw the PRO-43 at a local store. It's not bad. It's small,
almost too light, has 2 power inputs, one for charging and one
for external power, and has very good sensitivity and audio.
One gripe I have is the chicklet sized buttons and the lack of
colour coding on the buttons. The other gripes are that it still
uses bands, and lots of them, and that restoring 800 MHz is non-
trivial. However, a local store will make the change for you.

|> background music when they put you on hold. That, of course,
|> is illegal, and you'd have to disconnect from the patch.

This sounds somewhat discouraging... It effectively prevents
you from being able to autopatch to somebody's business phone,
no matter how legal your call per se is...

|> 2. I'm not qualified to discuss the legality of a long-distance
|> call.

What difference is there between "local" and "long-distance"?
I don't recall FCC differentiating between the two.

But now - much more interesting point [I think :-].

Somewhere in the ARRL guidelines about using autopatches
(I guess it was in "ARRL Operating Manual") I found:

You should not use autopatch if a telephone
call can do it. <not the exact quote, sorry>

Now, since cellular phones are well-known and readily
available - THERE IS NO SITUATION when one can't use
a phone! Just get yourself a cellular! "Legally"
there's no excuse for using autopatch rather than
buying a cellular phone...

Does htis mean that we shouldn't use autopatches any
more? Anybody cares to comment?

Regards,
Uri.

harcke@hawkeye.synthesis.cornell.EDU (Leif Harcke) says:

>I've recently become confused over the RST SENT/REC'D columns in the
>ARRL log book. I'm not sure which column stands for "how my signal
>sounds" (my RST) and which stands for "how his/her signal sounds" (his
>RST).

>Which column is which? The choices are:

1) SENT = his RST
REC'D = my RST

2) SENT = my RST
REC'D = his RST

>I've been going by system #1, but someone recently told me system #2
>is the correct way.

While it doesn't matter for a paper log, it does matter when you take
your logging to computer. If the computer logger is to print QSL
labels for you, it must know which report to put on the card. In this
case, all the computer loggers I've tried choose the "sent" RST field
to mean the one that the logger (ie. the person typing the log
information into the computer) gave out. The person logging "sends"
an RST to a a station, and "receives" an RST from a station. So by
your description above, 1) is the correct way.

This also makes sense from a practical point of view - if a station
calls you, you can determine his RST before he sends you his
report. Thus, you enter the RST you can determine right away in the
first RST box on the logbook page, then write the RST s/he sends you
in the 2nd column.

But in this day of all 59(9) reports, who cares about the order? ;-)

Source record: 287264

I have built (Sucessfully) MANY Power RF FET amplifiers. I find them trivial to build folowing the Motorola guidelines. Power supplies? I find building 28 volt 10 amp supplies trivial also. (Use a Power FET and a 723.) Heat sinks? Bind the FET to a copper spreader, bind that to a suitable finned sink, again trivial.

Now I confess, the 1200 watt HF dual FET amp is a BEAR to build if you don't have the transformer materials. But, a simple 125 watt 2 meter power amp is easily done in a afternoon. I further admit 450 Mhz amps are tricky, with any transistor.

However,... Paul is right! THey are EXPENSIVE!

Tom

878. Auto RFI: Honda Civic

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 16:52:18 UTC
From: RON.REDER@OFFICE.WANG.COM
Message-ID: <199207201552.AA11770@tuna.wang.com>
Source record: 287252

This is a follow up to the posting about 89 Honda Civic RFI problems. I own an 89 Accord LXi (fuel injected) and have had similar problems. I have also had a problem with a birdie from one of the car's computers. It wanders across the 2M band, depending mostly on the temperature in the car, and is quite strong. It is FM modulated by the noise on the car's 12 V supply.

I finally traced it to the box that controls the 10 second timer for the ignition key light as well as the seat belt warning light and several other things. It is a black plastic box located below the entertainment radio. and has a single cable and connector on the side of the box toward the front of the car. It is about 2" high, 3" deep, and 7" wide.

Inside is a circuit board containing several ICs.
One of them contains an oscillator that caused the birdie.
On my circuit it is a Motorola part labeled (M)6362539B and
may be found near a large electolytic capacitor. It has 20 pins. Between the IC and the edge of the board is a light blue ceramic resonator which has 3 pins. I soldered a 100 pF disk ceramic capacitor from ground (the trace that connects to pin 1 of the IC on my circuit) to the pin on the ceramic resonator that connects to pin 4 on the IC (this is the pin on the ceramic resonator closest to pin 1 on the IC).

This either reduced the harmonic of the oscillator that was causing my interference problem or moved it elsewhere. Two cautions are in order here. Performing such a modification may void your warrantee :-(. Also your particular oscillator may refuse to oscillate with the new capacitor in place. The symptom of this is a repetitive chiming from the board's audio chime unit. I had this symptom when I tried to connect the capacitor to the pin on the other end of the ceramic resonator.

I also placed some clip-on ferrites over the cable to this black box with little effect, but I left them there for now. I'm still working on the ignition RFI that remains. Good hunting! 73. Ron Reder KA1KCU

Source record: 287253

I wonder if anyone has had this same problem: the keyboard acted like someone would intermittently push the # key. This is a big problem on the '202 because the key is also the <up> key for channel select, vfo tune, and menu select. The only time it didn't do the Mystery Keypress was when transmitting, ie. no <#> transmitted.
So I took it into the RadShack where it was purchased and they said "no problem it'll be back next week, 2 weeks, tops". Needless to say the needed part was bo'd and I won't get back until next week at least.

Anyone else have similiar experiences??

Peter Laws |"The '90s are gonna make the '60s| pcl@engr.uark.edu
n5uwy@ka5bml.ar.usa.na| look like the '50s"--D. Hopper | plaws@uafsysb.bitnet

First they stole the 4th amendment. I said nothing because I don't deal drugs.
Then they took the 6th amendment. I was silent because I know I'm not guilty.
When they came for the 2nd amendment, I kept quiet because I don't own a gun.
Now they've come for the 1st amendment, and I can't say anything at all.

880. MFJ 20M QRP Rig

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 17:07:26 UTC

MFJ 20 Meter QRP rig (a personal review):

Got some extra money and was going on vacation...so decided to try to put a QRP backpacking station together. Ordered the MFJ QRP for $165 (with shipping) was real hard to find a store that had one in stock. Got a real good quality backpack and built a resonant dipole (about 1.3:1). Bought a 12v 7ah sealed lead-calcium battery from a Radio Controlled Hobby Supply. I am using a straight key. I want to get the keyer chip and some solid brass paddles.

Well plugged it together at home...boy was I amazed...I am a fairly new ham and heard that MFJ stood for "Mighty Fine Junk"... to me it now means "Mighty Fine Job". The receiver is real quite and the transmitter works great.

Went to Myrtle Beach and hooked the dipole up at night between 2 parts of my motel with the antenna up at about 40 feet. Had some good long QSOs with great reports on the sound quality. Worked Spain, Italy and a few other DXs. All was well till I was about to break down the station and the owner walked up to me and asked what I was doing (the antenna was hanging above the pool/Jacuzzi area...other guests were very interested, and I always stopped and explained what I was doing and let them listen) then she sent her husband up .. he was about ready to kill me...guess I will always ask first from now on.

On the way home stopped at a YMCA camp with cabins and asked this time. Work France for a good long while and we discussed the radio setup in detail... again I got great reports.

Best of all was when I came home.. went to a lake the next day and setup by the lake in a shady area with a picnic bench. The Olympic contest was on. In about an hour and a half I worked 5 Soviet stations, Bulgaria, Italy, Spain, Yugoslavia and someother DX as well as US stations. Got almost all on the first call.

I had a great vacation thanks to the little QRP set up. Can't wait to setup at a few more lakes in the area.

881. 30 meter mystery

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 17:24:20 UTC
From: NELSON_M%athena@leia.polaroid.COM
Message-ID: <9207201723.AA24628@ucsd.edu>
Source record: 287258

I ran across this 1983 GEARVAKf article recently which has caused me to question the veracity of its conclusions, in the light of the current allocation and use of the 30 meter band. Perhaps someone can suggest a theory which will explain the present [apparent] existence of signals in the middle of that band?

NEW DATA ON THE HARNISHE-LISHNUS EFFECT

Several years ago we revealed in these pages the discovery that radio waves were gradually slowing down. Found during experiments conducted by our own Dr. Elwood P. Lishnus and Dr. Avruell U. Harnishe of the GEARVAKf Scientific Studies Committee, the Harnishe-Lishnus Effect has had a profound influence upon the manufacture and design of amateur radio equipment and other devices that make use of the radio spectrum. Originally, radio frequency drifing was thought to be a minor problem within receivers and transmitters brought on by unstable heating and cooling of frequency-determining circuits. That theory was abandoned, however, when the slowing of the radio waves forced the electronics industry to change its frequency measurement system from the cycles-per-second to the Hertz standard. New equipment manufactured under the Hertz standard did not drift, whereas old gear made under the cycles-per-second standard continued to drift from set frequencies. Observation of this phenomenon led to the discovery of the Harnishe-Lishnus Effect in 1966. The early experiments, however, dealt only with frequencies below 10 MHz. Last year, Drs. Harnishe and Lishnus made a series of observations of the slowing of radio waves above 10 MHz and found that they vary at a much different rate than those below 10 MHz. Surprisingly, they found that the lower frequencies are actually pulling away from the higher frequencies, leaving a gap in the middle. That gap just happens to fall right in the new 30 meter amateur band between 10.109 MHz and 10.115 MHz. The FCC won't let us operate there because there are no frequencies to operate on! Any rig loaded up in the gap would see an infinite SWR and instant destruction. The Harnishe-Lishnus Effect provided early warning and probably saved thousands of dollar of equipment from ruin.

According to the FCC, this isn't so. The question came
up when a local repeater control op blew off my phone
patch because they had music on hold. I called the
FCC to ask them, and the guy at the PRB desk said that
music on hold is no problem with them; the music rule
is intended to forbid broadcast style operations only.
Incidental music in the background, he said, is ok. I
don't have this in writing, but that's what the FCC guy
told me on the phone, for whatever it's worth.

886. Inverted-L Question

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 17:43:22 UTC
From: wrb@cbnews.cb.att.com
Message-ID: <1992Jul20.174322.22137@cbnews.cb.att.com>
Source record: 287261

I just put up a 3/8-wave inverted-L for 80 and 40 meters as described in July '91 QST. The article says that the feed-point impedance on 40 should be around 100 ohms purely resistive and vary from 70 to 130 ohms with some inductive reactance on 80.

Well, once I got it up, I took the rig and cross-needle power meter out to the feedpoint. I had about 2.3:1 on 40 at the low end and it got higher as frequency went up - antenna is a little long. No problem.

Before pruning, I ran about 51 ft. of RG-59 into the shack. I figured this would reduce feedline SWR once the antenna was resonant (100 ohms to 75 better than 100 to 50) as article stated also.

When I went into the shack to get an initial reading, the SWR was damn-near perfect! OK, so I stumbled onto the correct length of 75-ohm coax to give me 50 ohms at the end.

The question is:

SOULD I PRUNE THE ANTENNA FOR RESONANCE OR LEAVE IT THE HELL ALONE?

I intend to use a tuner anyway to match it to my solid-state rig. The antenna seems to work OK on 40. I've called three stations and they all came right back. Two in the daytime at about 200-400 miles and one at night at about 550 miles. All gave good reports. I haven't tried it on 80 yet.

I don't clearly understand what I am giving up, or what I would gain with the antenna tuned exactly. It is broadbanded as hell - 1.05:1 at bottom of 40 to 1.55:1 at top of the band. I have a series capacitor made from RG-213 in series for 80 - SWR about 2.25:1 and I use the tuner to match to rig. I short the cap for use on 40.

Dead giveaway #1.

>Does this mean because he is an "EXTRA" that gives him right to say that
>medical reasons are "Lame" ones for not learning the code?

No, it means that your diatribe about Alan being a disgruntled tech was
considerably less than factual. Moreover, given the number of hams that
Alan has elmered in the past, I'd say that he *does* have the right to
judge an excuse as being "Lame".

>A trip to the same callsign server shows me a few things too - >
>(1). It is VERY outdated and incorrect!
>(2). The only thing correct in the callsign server is my age -->36 and my
>Callsign. How strange it is that people *DO* upgrade real fast, eh?

Of the three servers I've checked, all of the information on Alan's license
is correct -- after all, it's Alan's character that you've assaulted and
I'm defending, not yours. Yes, the tapes are generally cut only once per
year, and so they tend not to show upgrades, but the relevant issue at hand
is AZP's license class, and since he has an Extra, his entry is unlikely
to change due to an upgrade.

>I openly mentioned the fact that the person in question "had medical problems
>and can't hear tones." Notice the key word, "AND", meaning more than one
>problem. Now, what about my "Blatherings"?

Aside from rare psychological conditions, tone deafness *is* a medical
problem; thus your "and" here is clearly inclusive. Your post facto
interpretation here is so nonspecific as to be meaningless.

Perhaps "ham radio" should be in the organization name rather
tham "amateur radio." Illinois call letter plates used to say
amateur radio but changed to ham radio a few years back.

I think the public recognizes the term "ham radio" and not "amateur
radio."

Funny, I've had these monitors in use within 3' of analog telephone handsets at work and at home since they were introduced in 1987 and haven't ever had any such trouble.

> Apple has introduced a 'low field' monitor to deal with this problem.

Either this is very new, like yesterday or so, or for some reason none of the Macintosh press had any coverage of it. I read MacWeek avidly. Can you state a reference for this?

> The 1992 NEC Multisync
> series are also available in "low field" versions. This is intended to
> cut VLF emissions, but it might help out hams, too.

VLF emissions aren't likely to cause trouble for Hams. What usually causes trouble is RF emissions from the microprocessor clocks and other digital signals radiating to the outside.

Fortunately, Macs are best-sheilded and filtered computers available. Perfect for the ham radio user.

I know that the Radio Amateur Callbook Co. always has made a big deal
out of the copyright on the Callbook. I believe their argument is that
their list is NOT just a copy of the government database, but includes
info on silent keys, address changes, etc. not reflected in the FCC files.
I have even heard that they insert occasional minor intentional errors
to catch copyright violators.

>1. FET designs are nice because FETs are easier to deal with (easier matching)
> and they have no thermal stability problems.

That is certainly the conventional wisdom. It is based on the fact that the ON resistance of FET's increases with temperature, which is thought to cause reduced drain current. But ON resistance only applies when the FET is turned completely ON. When the FET is biased in the linear region, the current is controlled by the gate voltage. With constant gate voltage, the drain current INCREASES with temperature.

So how come FET's don't have thermal runaway problems too?

ARRRRRGGGGGGGH!!!!!!!!

_I'm_ the ARRL, DAMMIT!!!

I'm _not_ a 70-year-old OF talking about his gall bladder operation on 3925.
I'm _not_ an HF DXer chasing after #$6QUX on 14179 (or 14004).
I'm _not_ a contest junkie hollering "CQ CONTEST" on 7210.

I spend most of my hamming time on 440 FM, on a linked repeater system that covers most of Texas. I do packet radio, and TCP/IP on packet, and computers (somewhere a lot closer to the leading edge than the C-64 crowd). I'm working with some other folks on a micro-based repeater controller, programming and debugging. I've contributed the odd hack to the KA9Q NOS program, and made it work on a couple of out-of-the-way machines. I've spend three years as president of the frequency coordination (among other things) body for the state of Texas, and still serve on its board of directors. Ham radio gets a lot of my spare time.

I support the ARRL for one reason: Without it, ham radio would not be here. It would be snapped up by the UPSs of the world, grabbing frequencies right and left until there was nothing left.

Those of you who think the ARRL is only for the types I listed myself as not being a part of earlier, then GET INVOLVED!!! The League is what YOU make it! If you don't get involved, the SHUT THE HELL UP!!!!!!

(Argh. I'm getting Goddamned tired of reading that kind of crap.)

An amateur radio call sign logging program to run under AmigaDos V2.04 and above.

I've just uploaded it to amiga.physik.unizh.ch and HUBCAP.CLEMSON.EDU
On amiga.physik.unizh.ch I put it in /amiga/new and it will mostlikely make it
to /amiga/comm where V1 can be found.

On HUBCAP.CLEMSON.EDU go to /pub/amiga/incoming/stuff.
Interestingly enough, I was able to delete the old version.

File names are:vhlogger_V2.readme & vhlogger_V2.lzh

Here is the .readme:
Short: Amateur radio call sign logging program.

This program uses a btree mechanism to provide
fast storage and retrieval even when the data
base is on a floppy drive. This is Version 2.03
an update to the previously released Version 1.
Changes: Dos 2.04 look, ARexx port, ARexx examples,
reorg utility included, improved history display.
Binary only, share/freeware. Prereq: AmigaDos V2.04
or greater Author: Vincent Herried (KA8CTE)

907. Whats a LEAD-CALCIUM battery?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-20 21:00:54 UTC
From: gary@kimbark.uchicago.edu
Message-ID: <1992Jul20.210054.3244@midway.uchicago.edu>
Source record: 287091
Cross-posted to: rec.radio.amateur.misc,sci.electronics

I just bought a 12 AH 12V battery for use with some radio gear. When it arrived I thought it would be a typical lead acid battery. Looking at the specs for the battery its a LEAD-CALCIUM battery.

So, how is a lead-calcium battery different from a lead-acid battery? Am also looking for info on the shelf life and estimated number of (charge/discharge) cycles for the life of the cell.

For this lead-calcium battery terminal voltage is 2.4V/cell (*6) = 14.4V. Its advertised for standby and cyclic use. Any thoughts?

Thanks,
Gary

>Mike, N4PDY

Well, Mike, what if the individual at the PRB desk had said it was *NOT*
OK and in addition, said the FCC was going to publish a clarification on
the subject the next day? By asking what probably should have been
unasked (or at least asked of the League), you took a gamble that the
FCC wouldn't have taken further "clarification" action, action that
quite possibly could have instantly made illegal, operating practices
that the ham community and the FCC considered "OK" in the past.

Asking the FCC is dangerous business, and is best left to the experts.

Not really a flame, just a friendly warning. For further reference, see
the column entitled "Don't Ask the FCC" in a recent copy of QST (August
1991, I believe).

OK, there's more than one way to skin a cat. Last year, wasn't there
was a court ruling which ruled that the phone book, being just a list,
could not be copyrighted. By this reasoning, lists of callsigns such
as those described above, could not be copyrighted. Thus, we can
freely copy it with impunity. Am I correct?

> and more accurate fixes.
>
I have a Garmin GPS 50, which is a great little unit. Instead of having
5 channels, it multiplexes 8 channels at a time. Having separate
channels is nice, but 8 sats is better than 5. It probably averages out
the same in the end. The specs with reespect to update times seem about the
same. It's small enough to fit in your pocket, too. A nice unit.

> Most will interface with other equipment using NMEA 0183 (I think that's the
> right number; the info is at home and I'm at work!)
>
Does anyone have any idea what this is? I assume that it is serial, since it
comes out 1 wire, but what baud rate, etc, etc.

> Some of the good units are now available for as little as $1300; others,
> not so good, are available for less than $1000.

The GPS 50 sells for about $899, and I can't imagine what the extra $400
would buy. It tells the time, accurate to 1 sec (?apparently the delay in
getting up to the sat & back down, which is about 2/3 sec), will give
sunrise/sunset times, has all sorts of alarms, gives magnetic and absolute
bearings to waypoints, calculates distances, etc, etc. The one thing I
don't understand is that it tells you where the GPS sats are at the time,
and it doesn't seem to jive with what is calculated using sat tracking
programs using the two line elements posted all the time. The thing is very
accurate, the 50-100 feet seems to be correct, although altitude is less
accurate, but I can't see how it can be so accurate with respect to where it
is and be so far off with respect to where the sats are, although it is
possible that the error is in the sat tracking programs, since I don't think
they are quite so good on sats that far away (these are nearly out as far as
geostationary sats), traksat sometimes bombs out on geosync sats.
Another thing that's interesting is that if I walk reasonably fast around
my yard carrying the GPS 50, it will tell me what direction I am walking
and how fast, with updates about once per second, and yet I obviously
haven't moved 50 feet in that second, so it must have a relative precision
that is better than the 50-100 foot accuracy.
The only negative is that if there are a lot of power lines, the thing tends
to loose contact with the sats, but then I usually have the antenna inside the

unit inside the car on the dashboard. I'm amazed it can pick up anything from inside the car.
Anyway, I think the cheaper models have a lot to offer, and if I can figure out how to interface it with an rs232 port, it will make a great way to draw maps on a computer. A lot of fun.

920. Expensive chargeRe: How can I determine charge state of Ni-Cad battery?

Back when I worked for an electronics manufacturer I learned that they have to charge about 3 times the cost of manufacture if they want to stay in business (make a net profit). $40 * 3 = $120 says their price is about what you should expect for technical (non-consumer) equipment.

921. Radio interference with radar units

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 02:36:40 UTC
From: njs@scifi.uucp
Message-ID: <1992Jul21.023640.3979@scifi.uucp>
Source record: 287106
Cross-posted to: rec.autos.driving,rec.radio.amateur.misc

A friend of mine was doing 45 in a 45 zone the other day, while talking on his ham radio.

Next thing he knows, he has been pulled over for 59 in a 45. He firmly believes he wasn't speeding (I've ridden with this guy, he typically drives the speed limit) and I believe him.

He has heard of cases where radar evidence has been thrown out of court due to interference from vehicles which were broadcasting at the time they were clocked, on CB radios. He feels that if radars can be fooled by a 5 watt CB, they are likely to get pushed around by 50 watts of 2 meter.

Does anyone know any specifics? If so, please mail me at the below addresses.

Followups set to rec.autos.driving.

922. Deed restriction bans all ham antennas

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 02:37:36 UTC
From: res@colnet.cmhnet.org
Message-ID: <1992Jul21.023736.968@colnet.cmhnet.org>
Source record: 287100

Recently, a friend of mine (non-ham) contracted to have a house built in a new neighborhood. He mentioned that included in the list of prohibitions in the deed restrictions was one banning any "ham antenna". I queried him as to whether it was stated as a ban on external visible antennas, and he claims no, that was not the case, although external TV antennas are also prohibited.

Now, I suspect that the intent is to prohibit external antennas, but then it occurred to me that perhaps the developer was attempting to prevent RFI. Taken literally, this deed restriction would prohibit mobile antennas on owner's cars, and even the possession of a rubber duck on the premises. (It is unclear how it would apply to visitors.) This could become a problem if a neighbor of a ham ever has a case of RFI and decides to enforce the deed restriction. Note that PRB-I addresses legislation, but not deed restrictions.

Is anyone else aware of a deed restriction that is so restrictive as to flat out ban all ham antennas from a neighborhood? Anyone care to speculate as to what would be the best way to fight such a deed restriction?

Apparently the FCC rep understood more of "keeping in the spirit, not the
letter, of the law" than your control op did. Probably the rep also knew that
any competent Judge would use the same rule of thumb.

Yeah right, as if a minute of random muzak on a repeater threatens ham
noncommercialism. Gimme a break, armchair lawyers. Nobody who matters, cares.
They're busy dealing with more worthwhile things.

>
>> ... [ARRL is] considering changing the name to something like
>> "American Amateur Radio League" or AARL. So What da ya all think?
>

Is the ARRL purely an *amateur* radio organisation? Is there anything
in its constitution to suggest this?

I have been trying to get the RSGB to adopt a broader approach, and encourage
non-ham radio-users (the professional broadcasters, business-radio service
providers etc) to become RSGB members and to change the style of operation
by the RSGB in general.
My reasoning?

(a) by getting the 'professional' users to join, they may see ham radio in
a more positive way, rather than just a bunch of jerks who clutter up
saleable parts of the spectrum.

(b) theres nothing in the RSGB articles of association to say
it is only open to hams.

The ARRL and the RSGB should move towards fulfilling, in a radio context,
the role currently filled by IEEE in the world of electronics. How about
ARRL/RSGB actually *proposing* International standards for consumer
electronic equipment RFI/EMI standards? Could save a lot of arguments!

Code? Certainly! Take your pick from ASCII, EBCDIC, Octal or HEX.

>their list is NOT just a copy of the government database, but includes
>info on silent keys, address changes, etc. not reflected in the FCC files.
>I have even heard that they insert occasional minor intentional errors
>to catch copyright violators.

On the other hand, a recent court ruling in the US concluded that the white pages listing of a telephone book could NOT be copyrighted because it was merely a listing of publicly-available data with no creativity in its arrangement or presentation, even though some material had been added, such as headers and indices. This leads me to believe that the Callbook people will have a similar problem attempting to assert copyright over the callsign information in their product.

The various maps, charts, and operating guides would undoubtedly remain copyrighted, but I'd guess that the listings of people are fair game.

Consult your attorney before doing anything foolish.

934. IC-24AT Problem

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 12:51:13 UTC
From: ajg@cbnewsl.cb.att.com
Message-ID: <1992Jul21.125113.16915@cbnewsl.cb.att.com>
Source record: 287116

I have a 24AT that I have returned to ICOM twice for the same problem.
The problem with the radio is that once the radio gets warm, the
receive audio goes out, and I get no S-meter reading. However, the
radio still transmits. Once the radio cools down, it works fine again.
I have been able to recreate this failure both during normal use, and
in the lab. I have also been able to isolate the problem down to one
particular area of the radio, but I did not attempt to repair it due
to the location of the problem area on the circuit board.
Each time I've returned this radio to ICOM I did so with a description
of the problem, and instructions to call me when the repair work was being
done. Each time the radio was sent back to me with a note that the
technician who worked on it could find nothing wrong with it. I should
also add that I never received a call from them as I had asked.
Can someone tell me what's going on here? Can it be that shipping the
rig to ICOM magically repairs it, and shipping it back to me undoes the
repair? What really ticks me off it that I'm without my rig for 3 weeks, and
each time I return the radio I have to pay the shpping costs!
Can anyone give me any suggestions of how to approch this problem? Should
I be demanding that ICOM replace my 24AT with a new one, and who should I
be sending nasty grams to at ICOM in order to get customer satisfaction?

Thanks and 73's

Hi!

I just buy a old Icom 2AT gear and i got a question:

I got with it a BC-30 charger, BP-5 and a BP-8.

How many time that should i charge each battery?
There are two leds (Pwr et chg),
does the light chg shutdown when the battery is full charge?

Thank you again,

Joel

For those that might be interested in GPS, here is a way to get more info:

CANADIAN SPACE GEODESY FORUM

As an aid to improving communication among scientists and engineers working with the techniques of space geodesy, an information dissemination and discussion group, called the Canadian Space Geodesy Forum, has been set up on the Internet/BITnet/NetNorth/EARN computer communications network. Messages consisting of news, comments, questions, and answers are exchanged among forum participants by means of a LISTSERV list. LISTSERV is an electronic mail utility that allows a message to be sent "simultaneously" to a list of individuals simply by sending the message to the list address. The address of the Canadian Space Geodesy Forum is CANSPACE@UNB.CA. Files can also be distributed or retrieved from CANSPACE including the monthly message archives. Any topic related to the space geodetic techniques of GPS, Transit, VLBI, SLR, satellite altimetry, etc., may be discussed. Information concerning satellite launches and orbital elements may be posted. Questions are particularly encouraged. GPS Constellation daily status reports and ionospheric disturbance warnings are posted.

CANSPACE is directly accessible through computers on the Internet/BITnet/ NetNorth/EARN networks. CANSPACE is also accessible from other networks such as CSnet, UUCP, Telemail, etc. through various gateways. Individuals may also communicate through CompuServe and the various bulletin board systems on the FidoNet network. Although initially intended to link Canadian geodesists and geophysicists together, CANSPACE now has a wide international subscriber list and is open to all.

To subscribe to CANSPACE it is necessary for you to send a message to LISTSERV@UNB.CA (***not*** to CANSPACE) with the following text:

SUB CANSPACE yourname

To find out who else is participating in the forum, send the following message to LISTSERV@UNB.CA:

REV CANSPACE

To have a message distributed to CANSPACE subscribers, send the message to CANSPACE@UNB.CA. The message will be automatically distributed.

Additional CANSPACE archive material can be obtained via the File Transfer Protocol (FTP). Send a message to LANG@UNB.CA to request further information.

CANSPACE is maintained at the University of New Brunswick by Terry Arsenault and moderated by Richard Langley. They can be reached directly via SE@UNB.CA or by phone at (506) 453-4698 or by fax at (506) 453-4943.

If you have any difficulties in accessing CANSPACE or want more information on the use of a LISTSERV message/file server, consult your local LISTSERV resource person or contact the Dept. of Surveying Engineering at UNB.

Message Archives

All messages posted to the LISTSERV-based CANSPACE mailing list are archived in monthly notebooks.

Archived postings can be recovered using the LISTSERV DATABASE function.

Here is an example of how to use this function. To list the sequenced index (item) numbers of the postings in the archives which contain, for example, the word "launch" and to list the contents of these particular postings, the body of a message sent to LISTSERV@UNB.CA should look like this:

// JOB ECHO=NO

DATABASE SEARCH DD=RULES

//RULES DD *

SELECT LAUNCH in CANSPACE

INDEX

PRINT

/*

The result of the archive search will be sent back to you as an e-mail message. You can substitute any other word or phrase for the word "launch". If you just want the item numbers, dates, and subject headers of the postings containing the particular word or phrase, leave out the PRINT command. You can print selected items by specifying the item number(s) with the PRINT command; e.g.,

PRINT 62, 74

To find out more about the LISTSERV DATABASE function, send the one-line message

INFO DATABASE

to LISTSERV@UNB.CA or any machine on BITnet/EARN/NetNorth which supports LISTSERV. You'll get the DATABASE manual back as an e-mail message.

File Archives

CANSPACE also supports an archive of information files related to space geodesy.
Such files include basic descriptions of GPS, lists of GPS information sources, GPS satellite Keplerian elements, etc. These files may be retrieved using anonymous ftp -- either directly or via an e-mail <-> ftp server.

CANSPACE-related files are on UNBMVS1.CSD.UNB.CA (131.202.1.2) in the "sub-directory" PUB.CANSPACE. Note that after you connect to UNBMVS1 you must give a CHANGE DIRECTORY command before you can list file names -- there is no initial default directory. To learn more about the vagaries of the MVS FTP facility at UNB, read the file PUB.$README.

Additional files for inclusion in the CANSPACE FTP file archives are welcome.

25 May 1991; Revised 26 September 1991; Revised 16 December 1991;

There's no problem --- you have a lead-acid battery. The lead is alloyed with other metals, and those metals modify the characteristics of the battery. Calcium is used in some, antimony in others. The sealed lead-acid batteries ("gell cells" are a subset of these) commonly used by hams for small standby or portable installations are the lead-calcium type.

Contact your battery's manufacturer and ask for a copy of their databook. Panasonic prints a particularly nice one, called something like "The Panasonic Lead-Acid Battery Handbook." I got mine for free from a local battery dealer.

939. Re: New Radio Shack Scanner (BOGUS!

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 14:39:31 UTC
From: ron@pilot.njin.net
Message-ID: <Jul.21.10.39.31.1992.15181@pilot.njin.net>
Source record: 287119

Well perhaps if Radio Shack as purveyors of Cellular Telephone equipment would stop encouraging such legislation as ECPA (which they supported), then you wouldn't have to worry about whether certain pieces of your merchandise would suddenly become illegal. I suppose Radio Snack sells more telephones than scanners, but still, there's also a move out to hit up the Cellular people for making false claims of security (there actually is none) of cellular communications.

-Ron

Brandywine Communications (the commercial side of Deleware Amateur Radio) has a truck that has the slogan "The convenience of a radio, with the privacy of a phone." (or is it the other way around, I snicker everytime I see that).

>In rec.radio.amateur.misc, koning@koning.enet.dec.com (Paul Koning) writes:
>>1. FET designs are nice because FETs are easier to deal with (easier matching)
>> and they have no thermal stability problems.
>That is certainly the conventional wisdom. It is based on the fact that
>the ON resistance of FET's increases with temperature, which is thought
>to cause reduced drain current. But ON resistance only applies when the
>FET is turned completely ON. When the FET is biased in the linear region,
>the current is controlled by the gate voltage. With constant gate
>voltage, the drain current INCREASES with temperature.
>So how come FET's don't have thermal runaway problems too?

(Is this an open book test? :-)

According to Motorola's Application Note 860, "Power MOSFETs versus Bipolar Transistors" (wasn't that one of the Godzilla movie titles?), ``All MOSFETs can in theory have a positive temperature coefficient on the gate threshold voltage. This means that the gate threshold voltage increases with temperature, trying to "turn the devcice off." In addition the g(m) will decrease, which also helps in preventing thermal runaway, which is commonly a problem with bipolars. The coefficient of the gate threshold voltage is also a function of the drain current. Normally the coefficient is negative at low current levels, and turns positive at higher currents. The turnaround point, which can be controlled by doping the other fabrication steps, must be at a current level not to exceed the maximum dissipation rating, taking the derating factor into account. Thus, the power MOS devices can be easily biased to Class A, without fear of a thermal runaway.''

So the answer is, they make sure there's a limit to how far they can run.

941. Re: Deed restriction bans all ham antennas

Newsgroup: rec.radio.amateur.misc

I would suspect that a covenant that bans ham radio on the RFI issue (as opposed to the "ugly antenna" issue) is unenforceable. It certainly is undetectable. Court cases have decided that Ham Radio is not a nuisance per se.

My covenent allows TV (including fringe reception) antennas but bans CB, Amateur Radio, and Satellite dishes mounted on the house. We use wire antennas hidden in the trees (as a matter of fact, it's very hard to point out the antennas to people who you are trying to show them to). We're also about to put up an R7, but we went for approval of the Architectural Review Board. It helps to have hams on the board (we do).

There is only one problem with the Ostrich approach Jay and that is
the simple counts to provide the demographics behind Paul's statement
are not subject to interpretation, either emotionally or literally.

Amateur radio is aging at an incredible rate as we are losing relevance to
today's youth. The recent attempts to do something about this seem to
be basically stopping the slide into smaller and smaller numbers as the
amateur population dies off. Rest assured that we had all better provide
active support to Fiber Optic networks, etc. for most telecommunications
services outside of Land Mobile if we are to relieve the pressure on
amateur radio spectrum, and we must also ACTIVELY seek new approaches
to attracting the youth of the world to amateur radio.

Source record: 287032

This is somewhat tangentially related to ham radio so I am cross-posting it
from where I targeted it - rec.motorcycles.

Ron
NW0U

SOME THOUGHTS ON HELMETS, BIKES, AND EMERGENCY EQUIPMENT

THE STORY (Very condensed.)

I was returning from a week long vacation in Sun Valley Idaho on Saturday.
We had been on the road for 13 hrs and were in the stretch of 2-lane
55 mph highway between Laramie, Wy. and Ft. Collins, Colo (home).
(Also on the Great Roads List.)

Just south of the Wyo.-Colo. border, we came upon an accident. It was
9:30PM, dark, woods on both sides. A motorcyclist was lying in the road,
her bike was on its side about 20 feet away and about 40 yards down the
road a deer was lying dead on the road shoulder.

We were about the 5th vehicle on-scene.

The unhelmeted motorcyclist had been riding along and had hit and killed
a (big) deer. She had head, neck and probably spinal injuries.
Her boyfriend and son had been on an accompanying bike. As we arrived, the
boyfriend had zipped off to find a phone and call for help. The earlier
arrivals were busy controlling the scene and protecting the victim from
cars running into the scene.

My wife and I stayed for about 1 hour and assisted by relaying info from
an EMT who attended the victim to the Colo. State Patrol by way of
my ham radio. Based upon that info, a rescue helicopter was dispatched.
We cleared the scene just before the big white light landed alongside the
road.

SOME THOUGHTS ON EMERGENCY EQUIPMENT

1. There were a few flashlights among the helpers. But a wiggling white
light isn't enough to warn or direct traffic on a dark country road.
2. Nobody, including me, had flares or reflective triangles to put in the
road to warn oncoming traffic.
3. The people waving the flashlights to direct traffic were practically
invisible.
4. The ham radio contact may have saved her life. It worked relatively
well. A cell phone would do as well though. (CB would have been useless.
We'd been trying Ch 9 for 50 miles coincidentally to report sheep in the
Interstate to anyone. No result.)

Note for Hams: The first op. on the repeater tried to bring up the autopatch
but was either so new or so rattled that he was holding down
a tone button while ID'ing thru the standard patch start-up
routine. Another ham then tried unsuccessfully. Then they
wanted to talk about the status of the repeater controller
macros.
In an emergency, time dilation made that routine feel like
a lifetime. I dismissed them (much too roughly) and had a
base operator relay verbally thru the phone. In retrospect,
after the initial phone report, we should have retried the
patch since time allowed but we locked in on what worked.

There is no substitute for practice and such aids as
auto-dialers and pre-programmed equipment. My 02AT came
up on the wide coverage repeater when I turned it on.
That helped with my lack of brainpower as the adrenaline
washed my thinking away!

WHAT I AM DOING AS A RESULT OF THE ABOVE

1. All cars get a new flashlight dedicated for emergency use.
Batteries to be changed when plates are renewed.
2. All cars get road flares (the one we were driving didn't have any)
3. Wife will sew some sort of sash or belt with reflective material to
be worn by traffic diretors. (Neither the Wyo. or Colo. troopers put these
on if they had them. They were just wiggling white lights too.)
4. Ham radio will continue to go along for the ride with a better antenna
to allow the radio to be taken out of the car without loss of signal.
(I had a magnetic mount 5/8 wave antenna on the car. A 1/2 wave Hot-Rod
will be added to the kit to allow the HT to be carried to the shoulder
of the EMT.The repeater could not be made on the rubber duck.)

Also of note- I run a scanner and CB on long road trips. The HT lives
on the floor. I had the choice of selecting the scanner antenna or the
2m 5/8 antenna. I'm glad I opted for the 5/8 to use on the scanner.
It helped when needed.

SOME THOUGHTS ON HELMETS

The "cost to society" argument for helmets tends to be rather easily dismissed.
I attribute this to the impersonal nature of the argument.

On a different scale, this lady's choice to (a) not wear a helmet and (b) to
ride at dusk/dark in deer territory, severely traumatized about 12 people who
came to her aid. These individual strangers contributed time, material and
emotional energy on her behalf, all because they felt it to be right.
(and that the law requires rendering assistance.......)

I think that she made a thoughtless choice that imposed unnecessarily upon
the kindness of strangers. Frankly, MY first reaction was not of compassion
but was of rage. HOW COULD SHE BE SO ALMIGHTY STUPID TO BE RIDING WITHOUT
A HELMET!!!!! She is free to choose to ride helmetless but neither I, nor any of
the helpers was free to let her die unattended. Two of the helpful
strangers remarked that this was the second motorcycle accident that they

had been first on-scene with in 2 weeks. (The other was a squid-boy that ran off the road when travelling the Masonville Rd. in a pack.)

When you reject the "cost to society" argument, please remember that you are also spitting in the face of suddenly involved strangers who will be inconvenienced by your decision. They cannot spit back at you as you lie unconscious and bleeding on (or off) the road.

The hospital was pretty protective about even telling whether the victim was alive or not. With pressure, they came across that she was in "serious but stable condition." Don't know her name, don't know her family, may not ever find out the extent of her injuries.

FOOTNOTE

This tends to reinforce my personal policy of avoiding riding at dusk or in the dark and of wearing lots of protective gear. If I get a helicopter ride, I want to look out of the windows.

Ride Safe,
Ron Miller

Paul W Schleck KD3FU writes:
> Asking the FCC is dangerous business, and is best left to the experts.

You seem to be saying "If you don't ask, they can't say no". I see you point, but I have to disagree with you. What if they really did object to music on hold, and expressed their objection in the form of one of those $20,000 fines they're throwing around these days. I would rather do what's right and obey the rules (as I'm sure you would, too) than take chances by flirting around the edges of poorly understood regulations. If music on hold is against the rules, then it's against the rules whether I ask about it or not. "Let sleeging dogs lie" is a dangerous philosophy; they can wake up and bite you.

jkearman@arrl.org (Jim Kearman) writes:

>1. It's either business or it isn't. If it isn't business
>related, it's legal.

Jim,
I understand what you are saying and am quite clear on what is business
and what isn't. Or at least I WAS until the other day when I received
a booklet from the ARRL "Welcome to Amateur Radio - All About FM Repeater
Operation" by Brian Battles, WS1O. Clearly, it was intended to arrive BEFORE
I got my ticket and keyed up for the first time. (So it was 1.5 months late.)

There are a few seeming contradictions in that booklet which I would be glad
to comment on to the appropriate person (WS1O isn't in the usenet list).

One issue covered in that booklet confused me: The age old issue of calling
for help from the Highway. I understood that I cannot call AAA or a tow
truck via the autopatch because it is CLEARLY business for the other party
even though it is rescue traffic to me. This booklet suggests that this is OK
since it has to do with potential loss of human life or property.
(I would quote chapter and verse, but, I left it on the table at home.)

OK...what are YOU doing about it? (I know full well that you've been a major contributor to ham radio, far more than I can claim. The question is generic.)

The problem I have with Paul's statement is that it oversimplifies the issue. Yes, the ham population is aging. Here's a clue, though: So is the general population. Further, Paul's statement does nothing towards helping the problem. Even more so, it completely ignores and belittles the many contributions to ham radio and the great amount of hard work put in to the League by folks my age and younger. (I'm about to turn 32, for those who don't have access to a callsign server.)

>Amateur radio is aging at an incredible rate as we are losing relevance to
>today's youth. The recent attempts to do something about this seem to
>be basically stopping the slide into smaller and smaller numbers as the
>amateur population dies off.

Well, we have no-code. It was supposed to be the panacea. Where's the flood of 10-year-olds we were promised?

>Rest assured that we had all better provide
>active support to Fiber Optic networks, etc. for most telecommunications
>services outside of Land Mobile if we are to relieve the pressure on
>amateur radio spectrum, and we must also ACTIVELY seek new approaches
>to attracting the youth of the world to amateur radio.

I can't argue these two statements. Where's the beef? How does producing $800 DSP TNCs with every whiz-bang feature known to man help bring in the youth of the world?

Is there a real new approach out there?

I've been quite unhappy with the existing rapid charger for
my Yaesu FT-470. All it provides is a timed charge with no
concern for the condition of the battery.

I understand that Yaesu has a new version. Any information
on such a charger, or better yet, anyone have any experience
with it?

thanks,

Grover WT6P

Don't get your hopes up on this one, Bob. In case you hadn't noticed, the League only uses "ham" as a pointer to "amateur" and always capitalizes the term "Amateur Radio".

While I'm at it, let me add that I agree totally with Jay Maynard's posting. People like him and Phil and lots of others are active League members (and in Phil's case, even on a technical committee) who are working to take amateur radio forward instead of sitting on the sidelines carping. I'm not by any means saying that you need to belong to the League to do good things for ham radio, but for heaven's sake, quit making false generalizations about those who are.

Patty

(FYI, I'm not--although I'm about to re-up. Both decisions were made for personal reasons having nothing to do with whether I agree with every League policy.)

uh-oh, here we go again.....

I'll limit my response to this to one short bit: the people who say that
are the same people who say that if someone is bleeding to death on the
side of the road that you can't call an ambulance or the police, since it
supports their business....keep that in mind. I'd go with the ARRL pub,
myself, considering that being stranded on the highway *IS* potentially
dangerous (possibly very much so, depending on the road).

Too true. I fried not one but two FNB-17 packs using the rapid charger before I got wise. My guess is that the phsically smaller packs can't absorb the heat generated by the rapid charge rate, and it cooks the cells; they always emerged from the charger almost too hot to hold. I blew off the rapid charger, and now just use the 14 hour wall charger. You have to be patient, but at least it doesn't kill the pack. Peak sensing chargers are the way to go; any good circuits out there?

>At the bottom of the page is a note that says: " The following licence
>types do not have a UK equivalent: Australia - Novice. USA - Technician,
>Novice. Is that plain enough?
>

The examination requirements for a B class licence are the same as
that for an A class licence with the exception of morse. This is also
true of the Australian 'Limited' licence BUT the US technician
licencee must pass more theory (i.e. general class) and morse before
he is granted the baseline HF privilages.
In other words UK class B > US technician hence no reciprocity.

959. Auto patch ... but without the phone ?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 17:55:16 UTC
From: kwmc@cbnewsj.cb.att.com
Message-ID: <1992Jul21.175516.12437@cbnewsj.cb.att.com>
Source record: 287040

I am interested in the the principles (legal) of autopatching.

It seems to me that if the use of an autopatch to connect to the
phone lines to talk to an unlicensed person is legal, then the use
of a similar device to talk to an unlicensed person co-located with that device
but not using phone lines would also be legal.

E.G. is it permissible for me to set up an autopatch at home, with which
I can talk to my (as yet unlicensed) wife at home, so long as I remain
the (remote ?) control operator. (No phone company involved) ?

Are such devices available and legal ?

What was the consensus recently on reverse autopatch, where an unlicensed
person causes a signal (telemetry ?) to be sent to the licensed control op
who then initiates voice contact. ?

Thanks for any help/advice ....

Ken Cochran N2RPN kwmc@usl.com

960. want 146/440 homebrew antenna plans

Newsgroup: rec.radio.amateur.misc

I need a dual-band antenna for 2m/70cm FM work at home. A look through the Handbook and the ARRL Antenna Book yields no ideas. Relatively small size is important; high gain figures are not (so long as it's at least as good as, say, a quarter-wave ground-plane on both bands). I could, of course, drop some $$ at the local ham radio emporium, but I'd rather build it myself. Any ideas? Plans?

Please e-mail to me directly; I will summarize if there is interest. I will be on vacation (at home building antennas!) but reading personal e-mail, so don't be put off by the auto-reply daemon.

Thanks in advance. Take care and 73 de

>discharge) cycles for the life of the cell.

Its essentially a lead-acid battery. One (perhaps both) of the plates
has been alloyed with Calcium. I believe the voltages, for charge and
discahrge run a bit higher, the plates are a bit more rugged,
physically, and there may be less tendency to sulphation.

>comes out 1 wire, but what baud rate, etc, etc.

If I remember correctly it is 4800 baud, one stop bit, but with a five volt offset. Some PC serial ports can read it others require a couple of batteries to move the signal.

> Another thing that's interesting is that if I walk reasonably fast around
> my yard carrying the GPS 50, it will tell me what direction I am walking
> and how fast, with updates about once per second, and yet I obviously
> haven't moved 50 feet in that second, so it must have a relative precision
> that is better than the 50-100 foot accuracy.

The 'relative accuracy' is about 10 feet. The Coast Guard is talking about installing transmitters at fixed locations which broadcast a 'correction signal' by comparing its known position and the position reported by gps. Mostly this is to deal with the 'selective availability' which the military has imposed. The reason for this is the claim that an enemy would use the gps system for targeting american sites. Thus they take the signal which can do some 20 or so feet (not sure of the accuracy might be 100 or something) and degrade it to 300 meters.

>The only negative is that if there are a lot of power lines, the thing tends
>to loose contact with the sats, but then I usually have the antenna inside the
>unit inside the car on the dashboard. I'm amazed it can pick up anything
>from inside the car.

Actually, the signal is very sensitive to things being in the way. For boats they don't recommend putting the antenna where the sails could get in the way of the line of sight from the antenna to orbit.

>on such a charger, or better yet, anyone have any experience
>with it?

Yes, I bought one of the new chargers after I got tired of my
EEB-scum novex charger cooking my equipment (and beeping to high
heaven). The New Yazoo charger takes about an hour to charge
the batteries and automatically falls back to trickle. It otherwise
appears identical to the older Yaesu 5 hour drop in charger ('cept it only
has two lights: RAPID/TRICKLE).

All my batteries are Periphex ones and it charges them just fine.

This is the FCC's only way to deal with it. If the owner was also the
significant user, they might choose to just do them initially, but they
don't have to. Otherwise it would be an FAA matter (and technically also
is anyway).

>This could become a problem if a neighbor of a ham ever has a case of
>RFI and decides to enforce the deed restriction. Note that PRB-I
>addresses legislation, but not deed restrictions.

This *MIGHT* be a way to get rid of the deed restrictions. Put antennas all over your car and leave it parked outside as much as is permitted (to not violate any OTHER restrictions if there might be). Do this for at least a year. If you get no complaints you *MIGHT* fall into the case where you can have the restrictions removed on the basis that since no one complained (and it was visible and obvious) for a long time, that there remains no intent to enforce. You still need a lawyer to proceed with this, for sure. This will also be a tricky one because you are depending on the wide generality of the restriction, violating one portion of it (antennas on car) in the hopes of having it removed as it might apply to another portion (antennas on house).

>Is anyone else aware of a deed restriction that is so restrictive as to
>flat out ban all ham antennas from a neighborhood? Anyone care to
>speculate as to what would be the best way to fight such a deed
>restriction?

Ultimately... don't buy there.

Find the CLOSEST place near that neighborhood where there are no such restrictions, and get a set of single band 1500 watt linears for every band :-)

The National Oceanographic and Aeronautic Association does own/operate the US Weather Service, but their major work is in charting the ocean: depths, salinity and such. Its officers are in the enviable position of having world-wide PX privileges, gov. pay grades etc. like all US military personnel, while remaining a part of the Dept. of Agriculture and not Defense (*). They also receive (for a shipboard tour of duty) seamanship and some piloting experience which rivals the Coast Guard's standards and exceeds the merchant marine's (who unfortunately does not grant reciprocity to former NOAA officers).

/Alan W Paeth
VE3AWP/KD3XG

* - Defense-wise, they occasionally get placed in "hot" locations during time of peace, ostensibly to revise an old chart when clearly the new chart is of strategic value to the US Navy. (Eg, detailed straits for use by subs).

>are not subject to interpretation, either emotionally or literally.
>
>Amateur radio is aging at an incredible rate as we are losing relevance to
>today's youth. The recent attempts to do something about this seem to

well, people are living longer and most people tend to be amateur radio operators for the rest of their lives once they enter the program. There has also been a pent up demand from the folks that show up late in life that wanted to be a radio operator since they were 10 but didn't have the time or money to get into the hobby until they were 55-65 or more.

i think it was Don Stoner that was saying that the average age has started to drop down with the influx of new hams entering via the code free license route. this is good but the only quick way to lower the age would be to shoot everyone over 30 and not permit anyone to get an amateur license after they turned 20 from then on.

one issue is that the old hams seem to be good at getting other old hams (friends etc.) involved and licensed. the whippersnappers need to be out there beating the bushes also. and looking at average age of amateurs without comparing it to the average age of the population as a whole is needed.

I'm not sure "relevance" is "relevant". It can be hard to believe but there are some people who should not be amateur radio operators. and there are some people who don't want to be amateur radio operators. and we need to avoid selling to the choir.

970. Calling the FCC

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 19:20:45 UTC
From: m14494@mwvm.mitre.org
Message-ID: <1992Jul21.192045.14668@linus.mitre.org>
Source record: 287051

A number of hams sent me email asserting very, ahem, Vigorously that calling the FCC for a rules interpretation is a Real Bad Idea. I certainly understand your point of view, and it's not like I call them every day (or every decade, for that matter), but shouldn't we have something better than an adversarial relationship with our Government? At its best, Government regulation is an expression of the will of the People; are we right to knowingly do things that may be contrary to that will, just because we know there's a low probability of being caught? Yes, it's true that the FCC seldom (or never) prosecutes "grey area offenders", but that doesn't make it right, or legal. Remember the Amateur's Code: the Amateur is Patriotic. There's more to patriotism than just waving the flag on the 4th of July; in part it's buying into the system, and working within it. If you think a regulation is wrong, or unrealistic, or whatever, the right thing to do is work to change it, not to ignore it or disobey it, hoping that the Government won't notice. To say that we shouldn't talk to the FCC is to admit that we don't believe in our Government, and aren't prepared to participate in it. Yes, this all sounds very idealistic, given the monolithic nature of the Federal Government, and no, the FCC doesn't care very much about ham radio, and yes it would be very, very hard to change anything for the better. But it seems to me there's a principle involved here that goes beyond the question of music on hold. Maybe this belongs in the .policy newsgroup, but if we're scared to talk to our Government, then something is very, very wrong.

>twp77@isuvax.iastate.edu | and believe, it can achieve. |
>TURNERW@vaxld.ameslab.gov --------------------------------

I suppose it's time for the commercial again. :)

I'm trying to build up just such a database. However, I still haven't heard from the various people who were working on client programs to deliver the data to the net. I am also trying to gather data, send a message with the word "help" in the body to repeaters@wattres.sj.ca.us.

If you have good ideas (and time to help!) on what/how to do a client that would allow queries like this to be answered, please let me know. I suspect that the longitude/lattitude info that I require would make answering such queries _much_ easier, since you can draw a line and do some interpolation and distance finding to that line. Or you could program in the _entire_ highway database, but that would probably be extreme.

Anyhow, talk to repeater owners in your area! Get the information!
SEND IT IN!!!! I have all of 37 entries.

(end of commerical)

>can in theory have a positive temperature coefficient on the gate threshold
>voltage. This means that the gate threshold voltage increases with
>temperature, trying to "turn the devcice off."

Interesting. I opened my Motorola Power Mosfet databook to a random page
in the center, specs on an MTM5N95. The Graph of gate threshold voltage
with temperature shows it linearly decreases from 1.17V at -50 degC to
.72V at 150 degC. Flipping through the pages, every other device I see
has a similar response.

>In addition the g(m) will
>decrease, which also helps in preventing thermal runaway, which is commonly
>a problem with bipolars. The coefficient of the gate threshold voltage is
>also a function of the drain current. Normally the coefficient is negative
>at low current levels, and turns positive at higher currents.

I think this is the answer. (Although I'm not sure exactly what is meant
by high-current threshold voltage, since the th. voltage is defined as the
gate voltage where the drain current just turns on.) The same data sheet
shows that the variation of drain current has a positive TC at low currents
and a negative TC at high currents.

Thanks for the info.

That's called "Differential GPS" (presumably because it uses the difference in GPS reading between you and a fixed receiver, plus the known location of that fixed receiver, to get your location). It seems you can buy complete D-GPS systems; for example, one article I saw described using them for recording positions in a soil survey for a new highway. Apparently the sort of accuracy needed for that kind of job is achievable via D-GPS (but not plain GPS). I don't know what those beasts cost... probably a lot.

|>...
|>Actually, the signal is very sensitive to things being in the way. For

I don't understand why that should be so, unless the sails are soaked with salt spray. Sails, after all, are dielectric. They shouldn't be a problem any more than the plastic cover on the antenna is!

975. R7 Owners question

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 20:10:16 UTC
From: harp@bnr.ca
Message-ID: <harp.54@bnr.ca>
Source record: 287055

I bought an R7 to use on my motor home. The WARC band resonators don't resonate where they should. Especially the 30 meter one. The SWR curves on 12 and 17 are broad enough that it doesn't really matter.

The original 30 meter trap resonated almost on top of WWV. The second and third ones they sent me resonate around 10.093. The band width on 30 is very narrow. If I adjust the cap to get in the band then the SWR is about 2:1.

Any others out there having trouble with this antenna??

Oh I just read the QST review. Theirs resonated outside the band on 30.

Other than that it works. From the Outer Banks I worked all the continents in one week end. Some times had trouble being heard. I'd say it is as good as any vertical with the exception of the above problems.

>Rob Stampfli rob@colnet.cmhnet.org The neat thing about standards:
>614-864-9377 HAM RADIO: kd8wk@n8jyv.oh There are so many to choose from.

INTERESTING question, one which I wonder about, too. Since PRB-1 really
cannot affect AGREEMENTS (and deed restrictions are looked upon as if they
are agreements) as you mention, just how far can a deed restriction
affect your federal rights or privileges? Theoretically, you and I can
agree to give up all sorts of federal rights or privileges by contract,
but how far will a Court go in enforcing such restrictions (especially
when you have very little real "choice" in "negotiating" such an
agreement....you have to take it or leave it.)

I frequently run into hams who have the restriction on all outside (visible)
antennas, and I advise them to negotiate...and if there is complete failure,
the alternative is to run an indoor antenna and to raise the power output
(increasing RFI and defeating the purpose of the restriction anyway....)
based upon their federal license to operate amateur equipment - which the
local government cannot restrict. But, suppose that the deed restrictions
got so oppressive that they prohibited operating amateur equipment on the
premises, what would a Court say to that?

Does anyone have legal contact with the problem? I am so darned busy trying
to get a Ph.D. here that I do not have the research time I used to devote
to such questions. Anyone have clues to cases that deal with similar
questions?

>
> Are such devices available and legal ?

It's legal to swap a local microphone for the phone line. As long as
you meet the valid restrictions for remote control (freqs suitable for
auxilliary operation). I don't know of anybody who makes a canned
product to do it, but the ACC repeater controllers probably have the
smarts to be used in this mode (I'd have to go look at the manual).

> What was the consensus recently on reverse autopatch, where an unlicensed
> person causes a signal (telemetry ?) to be sent to the licensed control op
> who then initiates voice contact. ?

Undetermined. People tend to lean towards the not legal side, but I
don't know of any of the people who use them getting a pink slip yet.
It's all a matter as to whether you believe that making the "ring"
indication is exerting control over the repeater.

This is ironic. My parents are members of the AARP, which is the American
Association of Retired People". Given the similarity between AARL and AARP,
I'm tempted to suggest the following:

The ARRL change the name to AARL, which stands for the
"American Association of Retired Lids".

Of course, I'm not suggesting that Bob or Steve or anyone else is a
lid or even retired. In fact, I'm an ARRL member and will continue to
be so regardless of a name change. Why? I like QST and QEX.

980. Yeasu offers free FT-1000 upgrades for CT use

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-21 21:39:45 UTC
From: chowe@bbn.com
Message-ID: <l6p111INNhdg@news.bbn.com>
Source record: 287059

Hi all,

I thought you would be interested that I received a letter from Yeasu
last night acknowledging the fact that the initial FT-1000 computer control
software was not sufficient for high-speed contest operation with CT. For
those of you unfamiliar with the inner workings of the FT-1000, the problem
is that for CT to sample the frequency or mode of the transceiver, it has
to do a "Status request" command that returns about 1400 bytes of information
at 4800 baud. That takes about 3 seconds, which is a significant amount
of time for a serious contester (which, by the way, I'm not).

The interesting bit is that because of the number of comments on this by
FT-1000 owners, they will now offer an upgraded ROM for the transceiver that
will enhance the computer control link software to permit selective
requests (at least, I assume that's how they solved the problem; they didn't
say in the letter). They will provide the ROM *free* to those owners wishing
to install the upgrade themselves, or, at your option, will do it at the
factory (presumably at some cost). The factory upgrades will be *not*
be done immediately, but will be scheduled at a later date. I assume
all new FT-1000s after this point will probably have the new ROMs.

So if you are an FT-1000 owner and CT user, you might look for a letter
from Yeasu Musen USA in your mailbox. I have to admit to being very
pleasantly surprised with Yeasu's commitment to their (admittedly high-end)
customers and their willingness to back that up with their own dollars
(namely the free ROMs). I thought I'd just pass the word on to others
who have not gotten their letters yet.

Our recorded covenants say something like, "No antennas above the peak of the roof of the house." It's slightly more complicated than that, but it's ambiguous: does it mean I can put one up out back that isn't over the roof and make it plenty high, or does it mean I can't put one above a plane covering my entire lot which passes through the peak of the roof? Since it's in a paragraph headed "FENCES", is it unenforceable because an antenna isn't a fence? Mind you, I'm not too worried about it; I think my neighbors will always be more tolerant than my SO anyway ;-) So far, wire antennas in the trees haven't been a problem.

988. Re: Deed restriction bans all ham antennas

res@colnet.cmhnet.org (Rob Stampfli) writes:
: one banning any "ham antenna".....
: although external TV antennas are also prohibited.
:
: Taken literally, this deed restriction would prohibit
: mobile antennas on owner's cars, and even the possession of a rubber
: duck on the premises. (It is unclear how it would apply to visitors.)
Yup - sounds like our deed restrictions.

: This could become a problem if a neighbor of a ham ever has a case of
: RFI and decides to enforce the deed restriction. Note that PRB-I
: addresses legislation, but not deed restrictions.
Well, yes and no...(see below)

: Is anyone else aware of a deed restriction that is so restrictive as to
: flat out ban all ham antennas from a neighborhood? Anyone care to
: speculate as to what would be the best way to fight such a deed
: restriction?
Yup - our restrictions (called "CC&R"s around here) are even MORE
restrictive. Theoretically, I CANT'T EVEN HAVE A TRANSMITTER OF ANY KIND
ON MY PREMISES. My lawyer has already pointed out the obvious; cordless
phones, cell phones, IMTS (old style) car phones, business band radios,
CB radios, baby monitors, etc.... Anyway, my strategy (in consultation
with my lawyer, who is NOT a ham) has been to keep a (sorta) low profile
but basically ignore those parts of the CC&Rs. Here's why:

1) (see the list of "prohibited" transmitters above) - If someone wanted
to "prosecute" (or is that persecute) me, I could claim "selective
enforcement" and insist that ALL of the above be banned.

2) My HOA, like most, has no budget for drawn out legal pursuits
(neither do I, but THEY don't know that).

3) A recent ruling in this state has held that a HOA CANNOT regulate
what it can't see - the specific case was a guy who put up a satellite
dish that was NOT visible from anywhere but on his property (right
up next to a fence). The court ruled that the guy was within his
rights, since it (the dish) was not visible to his neighbors.

4) When someone did ask me what my (callsign) license plate meant,
I told 'em. She then asked about antennas and RFI, and I told her
about the one in my car (but forgot to mention the ISOLOOP in my
attic, the 2M "flagpole" in our backyard and the 40M loop "guy wires"
on the mast that holds up my weather station (I got SPECIFIC,
WRITTEN permission for the weather station when the house was
being built)). When she then asked about the CC&Rs, I pointed out

to her that ham radio could be used in times of emergency, and was
a FEDERAL license (which seemed to impress her). I also managed to
mention PRB-1 (again, I forgot to mention that it applied only to
local govt) and after some amicable discussion she agreed that maybe
it was OK.

Anyway, I get out just fine, and I'm having a ball on 2M packet. Granted,
a tower with a beam would be nice, but.....

989. AARL vs ARRL

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 00:25:40 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9207220026.AA27011@cmr.ncsl.nist.gov>
Source record: 287071

I talked to Hugh Turnbull, W3ABC, at the Frederick/Walkersville Hamfest about a month ago. He brought up the subject of changing to AARL and asked whether I thought it made sense. He mentioned that it seemed to be an especially poor choice (re: AARP), but that some hams elsewhere in his Division were lobbying for the change (Hugh is ARRL Atlantic Div Director). I agreed that the change is inapproriate, and really out of date, since the advent of Packet Radio has brought ham radio full circle back to the message-relaying business again.

ps. Hugh is in his 70s, but really tries to keep up to date, has a packet mailbox, logs into the DX Cluster, etc. He is not a DX man.

>not plain GPS). I don't know what those beasts cost... probably a lot.

Surveying work rarely needs results in real time. Usually survey crews
record the exact timing data that they receive at the site, and then
go back to the office. When the DoD releases the exact ephermis data,
they then use a PC to reconcile their timing data with satellite postition
and get high accuracy information.

Personally, I think SA (selective availablity) is a silly idea, but then
I think most of the DoDs ideas about 'security' are silly.

991. Six Meter Question

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 00:57:40 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9207220058.AA27040@cmr.ncsl.nist.gov>
Source record: 287074

There was a question about 6-m operation in 92-717. Here is a LONG reply:

l---+---L1----+-T--2----T----3--T-+----4T---+---T5----+-T--6----R----7--T-+--r
This is revised from a message I sent some time ago to
someone who enquired about six meters. Since I just saw
another such request, I'm posting it for general
information. Absolutely no endorsements are given,
especially no endorsements from my employer.
****

Firstly, six is something of an acquired taste, I
suppose. There is relatively little FM activity on six,
and in any case I don't take part in it. I'm on the low
end; the place where SSB/CW activity is concentrated.
There is not much local rag-chewing on six. Except as
mentioned below, there has been essentially no packet
work on six.

Most of the SSB/CW operators on six are at least vaguely
interested in radio propagation effects. One of the
things that keeps many people on the band is that nearly
every propagation mode know to hamdom happens on six at
one time or another. It has held my interest for many
years. Oh sure, I've done some operating on other bands,
and have been pretty inactive for a year or so at times,
but ....

OPERATION

Operation is mostly on SSB, but switching to CW is common
for really weak sigs, and a few people operate nothing
else. Per the FCC, SSB must be above 50.1 MHz. The DX
calling frequency is 50.110 MHz. The calling frequency
when looking for US and VE contacts is 50.125 MHz. The
range from 50.100 to 50.125 is kept clear from domestic
QSOs, to give the DX stations a chance to be heard. Only
on the wildest of Es openings do you find SSB operation
much above 50.200 MHz. The are a few dozen CW (A1 or F1)
propagation beacons in the 50.060 to 50.080 MHz region in
the US, and others elsewhere around the world in the 50.0
- 50.1 range (VK/ZL are above 51 or 52 MHz). As well as
signal reports, most stations exchange "grid square"
information. On VHF and up bands, the world has been
divided in 1-degree lat x 2-degree long "squares" which
start at the south pole and date line and "read right
up". I am in FM19, for example - actually FM19JB, each

major "field" (FM) being divided 10x10 into 100 squares (19) and "square" being divided 10x10 into 100 subsquares (JB). European stations like the subsquares; most US stations don't even know their own. In any case, the "squares" and their VUCC awards have been a wonderful interest builder, and have kept the QSL printers in business!

RIGS

The equipment situation is easy to cover, so I'll do that first. Probably 50% of the active stations have 80 to 150 W output, either from old Icom 551D s (the 551 is 10 W), or from solid-state (brick) amplifiers following the many types of 10 W rigs. Perhaps 40% of the stations run just 10 to 20 W, but most of them either get an amplifier or drop out after a year or so. The remaining 10% have either tube rigs such as the Drake TR-6, Swan 250 (too drifty!), Heath SB110A (spurious sig 150 kHz or so from output), or high-power amplifiers. The kilowatt is quite rare on six (see below for why). The norm for "serious" stations is the 150 W amplifier.

ANTENNAS

A beam is essentially necessary. Everyone is horizontally polarized, but cross-polarization doesn't matter for Es, F2, or Aurora. A few stations use 3-element beams, but a 4 or 5 element beam is so small that a LOT of people use them. Quite a few people have Cushcraft 6-element "Boomers". Mine really over-shadows the house!. There are a few other big beams, and the lunatic fringe stacks them, etc. For example, K6QXY showed me a photo of his stack of 4 six-meter beams, each with a 50ft (15m) boom. The higher the tower the better! RG8 or RG213 is plenty good enough cable for most people. Antenna-mounted preamps are never needed. External noise is fairly high at 50 MHz. It overrides the front-end noise figure on about all the rigs on the market today unless you have a LOT of cable loss or a VERY quiet location.

PROPAGATION

Tropo - The ordinary ground-wave tropo range on six isn't quite as great as on two. There are a number of reasons. Since there are so many other prop modes on six, people don't try so hard on tropo. Antenna gain often is higher on two. Noise is lower on two. At least in the summer, stations like W3BWU (Pittsburgh), W3IDZ (northern NJ) are easily worked from here with the beam pointing at them, and can be heard at almost any pointing. They are in the

150-W class.

Meteors - Any area workable by meteors can be worked more easily by Es or aurora. Even though meteor bursts are much strong and longer on six than on two, little use has been made of them. There has been a VERY little meteor-burst packet work on six. I had the first such contact (with W0RPK). W3XO worked him a few years later.

Ionoscatter - Some people think it's really meteors, but every weekend morning there are a number of nearly-kilowatt stations working each other on SSB at distances of about 600 - 1000 miles by ionosperic scatter. Sigs are weak, and it takes good beams, height, and power, but it is very reliable. See the old NBS papers by Bailey, Bateman and Kirby, et al. Bateman and Kirby were/are hams. Ross Bateman died last year. Dick Kirby continues as head of ITU in Geneva.

Aurora - Much easier than on two. SSB is usually intelligible. Point north about dusk, most commonly in March and October/November. Lots of people work this mode when it happens.

Es - You know something about Sporadic E (Es) from TV. When you see interference bars on channels 2, 3,..,6, there is Es DX on six. Having much better antennas, modulation, and receivers, hams work Es when it isn't strong enough to be noticed on the TV. Es is most common from May to August, and around Christmas, here in Northern latitudes. In addition to the common single-hop range of 500 - 1500 miles, there are quite a few double-and-more hop contacts on six. Now that a number of Europeans are on six, we find that they can be worked from the US east coast each summer. Likewise the Caribbean stations work all over the US. The US west coast has an easy time with Hawaii and Alaska.

F2 - This is the traditional world-wide F-layer propagation you know and love from 20 and 15 meters. At most sunspot maximum periods, a few years of each eleven, the MUF reaches above 50 MHz in the autumn and spring. It isn't every day, but even antipodal communication has happened. Some dozens of stations now have cards from 100 countries. But they have spent MANY hours over many years trying to catch the fleeting opening. F2 brings an influx of the lower-band DX operators. The normal rather gentle operation gets somewhat lost at those times.

Transequatorial Propagation - The southern US gets a number of openings to South America by some kind of ionosphericaly-ducted propagation. The stations are

generally about equidistant either side of the magnetic equator. Given exceptional luck, an Es opening linked into this mode can make it available to more northern stations. This mode has bad flutter fading and a touch of the auroral spectrum spreading. This mode also works sometimes on two meters if you use CW and really good gear. It has been worked on 432 MHz.

EME - There have been a few EME contacts on six, but the required antenna size and high background noise makes it out of the reach of most people.

Did I leave any modes out?

TVI, ITV

There is no doubt about it, six has TVI troubles. You don't find a lot of people on six in channel 2 areas unless cable is widely subscribed-to. VCRs are very prone to six-meter pickup. The common connecting or power cable is a quarter-wave antenna for six .... The TV owners have their revenge since the 13th harmonic of the color subcarrier, or something, of TV sets and TV games puts out a birdy at 50.113 MHz to bother the six-meter operators in return.... There is also quite a bit of trouble from noisy power distribution lines if they aren't buried (usually bad insulators or poor guy bonding).

73,
Bob W3OTC

992. MD-DC QSO Party Announcement and Rules

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 00:59:27 UTC
From: eab@voa3.VOA.GOV
Message-ID: <1992Jul22.005927.20847@voa3.VOA.GOV>
Source record: 287076
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

___Maryland-DC QSO Party Rules
The Antietam Radio Association - W3CWC - is proud to present
The 1992 Maryland - DC QSO Party

TIMES: 1600Z August 8 - 0300Z August 9 and 1600Z - 2359Z August 9

MODES: Phone and CW/Digital
*Stations may be worked _once_ per band using each mode.
*CW QSOs count in the CW band ONLY!
*Non-Maryland/DC stations must work only Maryland/DC stations
for credit points.
*Maryland/DC stations may work any other station.
*Mobiles and portable stations that change Maryland counties,
Baltimore City or DC count as a different station in each of
the above mentioned principalities.
*Repeater QSOs do NOT count. All other HF, VHF and UHF do.

EXCHANGE: Exchange signal report, QTH and major category of
operation.
*QTH is defined as the Maryland county, Baltimore City, DC, US
state or DXCC country.
*Major category is defined as CLUB, QRP (10 watts or less),
MOBILE, NOVICE/TECHNICIAN or STANDARD.
*Stations should only exchange the category that reflects
their highest point value.

QSO POINTS:
*Club stations in Maryland or DC are worth 10 points.
*Mobile stations are worth 5 points.
*Digital/CW are worth 2 points.
*All others are worth 1 point.

SCORING:
*For Non-Maryland/DC stations, each Maryland county, Baltimore
City and DC count as multipliers (maximum 25 possible).
*For Maryland/DC stations, multipliers are each Maryland
county, Baltimore City, DC. the other 49 US states and one
DXCC country (maximum 75 possible).

SUGGESTED FREQUENCIES:
*Phone: 1.860, 3.920, 7.230, 14.260, 21.370, 28.370, 50.150
and 146.550 MHz.
*CW: 3.643, 7.060, 14.040, 21.115 and 28.060 MHz.
*Novice: 3.701, 7.126 and 28.115 MHz.

NOTE: CW/Digital is suggested at 30 minutes past the top of the hour.

FINAL SCORE:
*The sum of the "QSO points" multiplied by the sum of the "Multipliers" equals the final score.

*BONUS POINTS: Mobiles may add 100 points to their final score for each Maryland county outside their home from which 50 QSOs were made.

AWARDS:
*A Maryland mememto will be awarded to the highest scoring US Station entry and to the highest scoring Maryland/DC Station.
*Certificates will be awarded to highest scoring station from each US State, Canadian Province or DXCC Country.
*Certificates will be awarded to the top MD/DC entry in these categories:
*Highest scoring MD/DC Club Station
*Highest scoring DXCC Club Station
*Highest scoring MD/DC Mobile Station
*Highest scoring YL Station (worldwide)
*Highest scoring Novice/Technician Station (worldwide)

In addition, certificates will be awarded to:
*The 3 highest SWL logs received
*The 3 top QRP entries
*Any station not receiving one of the awards mentioned above and making 50 QSO.

*A plaque will be awarded to the top scoring MD/DC Club Station
(Plaque donated by the radio dealer Amateur Radio of Hagerstown (MD))

All logs MUST be received by September 10, 1992. Mail entries to:
Antietam Radio Association
P. O. Box 52
Hagerstown, Maryland 21741-0052

Please direct all questions or comments to WA3EOP or W3AAT at the above address.

DO NOT direct questions or comments to the Internet poster.

993. ARRL (Re: ARRL Bulletin 68 ARLB068)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 01:18:44 UTC
From: elmore@virga.rap.ucar.edu
Message-ID: <1992Jul22.011844.6705@ncar.ucar.edu>
Source record: 287075

After due consideration of my latest post/flame I've
reconsidered; what I posted was harsh and petty. I let my emotions
get the better of me. Paul is obviously extremely bright, but it
seems he just can't resist throwing rocks whenever the opportunity
arises and it finally set me off a bit.

Intellegence is no excuse for antagonism, though. If he
doesn't like it, why not work to constructively change it? If he
says "I can't change it so why try?" then he is, by default, correct.
A hollow victory.

Yes, Newington's aristocracy often appears well within it's
dotage, but the only time an organization becomes hopeless is when
everyone decides that it *is* hopeless! If Paul, one of the brightest
people who bothers with the net, won't take the time to work at making
the League better, then who do we have left? The OFs! And then he
gets to sit back while sipping his gin and tonic, throwing rocks and
saying "See? I told you so! They'll never change!"

I'm 36 and decided to make my contribution as a Technical
Coordinator for Colorado. I didn't like what I had seen as a
Technical Specialist (one of the guys who actually does the field
work); there was no support from the technical "head" of our section's
field organization. I decided that I could do better and so I
volunteered. *Am* I doing better? I'd like to think so, though I'm
no organizational wunderkind and I'm not a tehno-whiz. I'm competant
but more than that, I believe organized technical field support is
important enough to throw some effort at it. Am I better than Paul?
Of course not, but I'd like to think my response is more constructive.

I should have posted this response instead of getting mad...
My apologies to Paul and the net.

Source record: 286980

During the past several weeks, I have observed at least one site regularly posting AMSAT keplerian elements taken off of the packet network. Are these people aware that Usenet already is provided with [much more useful and complete] element sets from TS Kelso every week?

I don't mean to be rude or offend anyone, but the practice of forwarding timely information from packet onto Usenet seems absurd when we already have dedicated people directly on the network providing the same information. I can understand the ARRL bulletins, etc. for which there currently is no other source, but the latest set of AMSAT elements posted here on the 20th of July took well over TWO WEEKS (!) just to traverse our pitiful packet network before arriving on Usenet. Needless to say, many elsets are practically worthless in such a stale condition...

We now return you to your regularly scheduled
HF_code_req./QRP_in_QST/rude_hams/RS_bashing flamewars...

>are not subject to interpretation, either emotionally or literally.

The terrible and sad fact is that it does not seem to be just
Amateur Radio that is greying. I read in Fortune magazine that the same
can be said for the hunting community.

It seems that "participation hobbies" are not attracting youth.
Youth have been brought up via TV and spectator sports to "watch". I am
personally very troubled by this. I don't have any children, but I
have to work with young adults who experience television, not life.

So, it is a degeneration that affects not just the U.S. amateur
community but the western world.

Yes, I know that young people are usually busy getting laid and
raising kids etc, but I am talking here about a continual aging of the
groups in active hobbies. It affects camping, fishing, hunting, amateur
radio, debating societies, bridge clubs etc. Amateur radio is just part
of the problem. I think we need to push for more younger members. But I
think more importantly we need to push to get youth involved - period.

Consider also that we are living longer with more liesure time.
Shall we condemn these people to watching TV and waiting to die?

Of course the tragic thing is that these people plopped
in front of the TV are not even being informed or entertained.
Talk about a wasted resource, let alone bandwidth.

As the latest song from Bruce Springsteen (who he?) puts it "57
channels and nothing on".

Yes, I know I am raving about TV. Yes, the TV industry does pay some of my bills. Yes, I know I have to prove that if people were not watching Oprah and Jerry Rivers they would be doing something. I grew up hearing that TV (Black and White 2 channels - Geezer Alert!) had ruined the art of conversation and hobbies. When I saw people in countries with 1 Gummint channel watch pure drivel rather than read, I believed it.

997. COMB6.ZIP - Hams: HF radio propagation prediction program

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 09:38:09 UTC
From: DAMICO@IPMEL1.POLIMI.IT
Message-ID: <4070.w8sdz@TACOM-EMH1.Army.Mil>
Source record: 286981

I have uploaded to WSMR-SIMTEL20.Army.Mil:

pd1:<msdos.hamradio>
COMB6.ZIP Hams: HF radio propagation prediction program

This program is able to perform HF Propagation Prediction, knowing
location and characteristics of the stations and sunspot numbers. This
algorithm has also been in use for several years at BBC World Service,
for the preparation of the transmission schedule. Your opinions
apreciated.

998. CONTEST.ZIP - Real CONTEST logging, and ARRL SS Simulation

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 10:10:45 UTC
From: jkasser@gsfcmail.nasa.GOV
Message-ID: <4081.w8sdz@TACOM-EMH1.Army.Mil>
Source record: 286982

I have uploaded to WSMR-SIMTEL20.Army.Mil:

pd1:<msdos.hamradio>
CONTEST.ZIP Real CONTEST logging, and ARRL SS Simulation

Program: PC-HAM Part 1, Version: 3.52 (06/25/90)
filename: CONTEST.ZIP

A contest logging program for the beginner or casual contest operator,
and a simulation of the Sweepstakes contest in the form of a game. You
can work the ARRL Sweepstakes from your keyboard. Lastly, a propagation
prediction program (WHATS-ON) allows you to predict when a band will be
open to other parts of the world.

999. ELMER100.ZIP - ELMER, the ham's Expert System or smart server

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 10:13:04 UTC
From: jkasser@gsfcmail.nasa.GOV
Message-ID: <4083.w8sdz@TACOM-EMH1.Army.Mil>
Source record: 286983

I have uploaded to WSMR-SIMTEL20.Army.Mil:

pd1:<msdos.hamradio>
ELMER100.ZIP ELMER, the ham's Expert System or smart server

ELMER is a tool for demonstrating expert system techniques, or building any interactive knowledgebase. It is ideal for use in amateur radio, or as a knowledgebase in a software (or any other product) support facility.

ELMER is an expert system based on a finite state machine using table driven software. The declarative knowledge is stored in the form of separate ASCII text and command files. The procedural knowledge is stored in the state table. The Data files in ELMER correspond to the Knowledge Engine (and the Inference Engine), the State Tables correspond to the Inference Engine. ELMER also contains an ASCII editor for text files, and a tool to view the state table. These tools allow the user to "teach" ELMER new knowledge.

Programming ELMER is simple. The knowledge base is broken out in terms of states and transitions. States can be passive or active. A passive state is one in which ELMER does nothing other than accept/parse further input. An active state is one in which ELMER loads and displays a text file containing information or shells to DOS and runs an external program. ELMER contains a set of tools for programming and debugging purposes. A state table for the procedural knowledge is drawn up using pencil and paper and a large sheet of graph paper. The built in text editor is then used to enter information into the table. The individual text files containing the knowledge are also created using the editor. The state table viewing tool is used to check the entries. The state table loading capability is used to exercise ELMER and verify the logic. Because the procedural knowledge is contained in the state table, all sorts of rules and linkages may be used.

1000. LL200EXE.ZIP - LAN-LINK 2.00 packet radio user software

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 10:18:36 UTC
From: jkasser@gsfcmail.nasa.GOV
Message-ID: <4086.w8sdz@TACOM-EMH1.Army.Mil>
Source record: 286984

I have uploaded to WSMR-SIMTEL20.Army.Mil:

pd1:<msdos.packet>
LL200EXE.ZIP LAN-LINK 2.00 packet radio user software

Program: LAN-LINK Version: 2.00 (05/01/92)
filename: LL200EXE.ZIP

LAN-LINK is a Personal Packet Terminal Program for the TNC1, TNC2, KPC-2 and most of all a smart multimode digital communications controller for the KAM, MFJ1278 and the PK-232. LAN-LINK is designed to optimize the configuration of the TNC in each communications mode and to provide some smart terminal features.

PROGRAM HIGHLIGHTS: Function key and Menu driven. Expert system (ELMER) in packet mode for building smart servers. Automatic logbook entries for Packet and Mailbox/Beacon Mode AMTOR Connects, semiautomatic logbook entries for other modes. Logbook file is dBASE compatible. Contest operation, sends standard message and automatically increments QSO count. Automatic optimized configuration of the TNC for each communications mode. All mode Function key 'OVER' feature (End). There are 10 files with fixed names (LAN-LINK.001 through LAN-LINK.010) which may be viewed and transmitted by means of function keys. They may also be edited from the Edit Menu. Set up of TNC for AMSAT-OSCAR Telemetry reception. Time display and event scheduler. ASCII Text Editor. Customizable Colors. Access to the TNC Command Mode is provided in case the user wishes to override any defaults. Automatic capture-to-disk of all packet radio connects. Automatic indication of the number of Packet connects. Local Area Network (LAN) message store and forward capability. Capable of automatic connect attempts to download a QTC from another station in the LAN. Capable of automatic connect attempts to a packet BBS to download your incoming messages, when your callsign appears on the BBS mail beacon annunciator. Capable of automatically requesting Bulletins on subjects that interest you from your local packet BBS. Digipeat monitoring and capture. Alert signal to let you know when a predetermined call shows up in a packet header on frequency. Conference and Bridge modes in multiconnect situations. Indicator that a specific station connected in Packet Mode, or linked to AMTOR Beacon/Mailbox while you were away.

Automatic NET/ROM and KA Node path set up from directory file. Selective answering machine and MAILBOX. Automatic contest (DX-pedition) mode. Will call CQ repetitively and either work the connect and keep going after disconnect or signal you when a reply is received. Zmodem binary file transfer capability. RTTY SELCAL.

|> flat out ban all ham antennas from a neighborhood? Anyone care to

I once looked at buying property in a place that banned not only antennas but also things like clothes-lines. I made sure they could be eliminated before I agreed to buy the land.

|> speculate as to what would be the best way to fight such a deed
|> restriction?

Why should you be able to fight them?? When you sign the deed, you are agreeing with all the attachments. You have no grounds to fight them. You have to either have them removed before you buy or look for another piece of property. The restrictions constitute a contract that you are willingly entering into. It's not like restrictive ordinances which can be passed after the fact.

1003. Re: Comments on Diamond X-500HNA for Repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-22 12:10:09 UTC
From: ag807@cleveland.Freenet.Edu
Message-ID: <1992Jul22.121009.16589@usenet.ins.cwru.edu>
Source record: 286987

The North Coast Amateur Radio Club has put up a number of Diamonds.
They have all failed. They were mounted on top of a 120 foot tower.
The installation was unremarkable. We have no particular problem
with wind. Each failure was seen as a partial (though deadly) loss
of signal. The last Diamond was taken down about two months ago.
Although sealed securely when put up and with no evidence of lightning,
the interior components were observed as wet. The foam holding the
light wire inside of the tube was soaked with water. The metal
crimps between sections of antenna wire were oxidized (as in they
looked rusty and discolored the antenna wire). This antenna was up,
as were the other ones, about a year. Various local amateurs have
had failures. I spoke with Diamond about the problem and they
suggested the antenna might not be the right choice for our needs.
We agreed. Need a tomato stake?

[munch]
>VLF emissions aren't likely to cause trouble for Hams. What usually causes
>trouble is RF emissions from the microprocessor clocks and other digital
>signals radiating to the outside.

While clocks and other digital hash are a problem with computers, the primary culprits are usually the very strong VLF deflection *pulses* that the monitor uses to scan the screen. These several *watt* pulses radiate harmonics across a broad spectrum. Thus the new low field monitors *do* make a marked difference in interference levels since the way they reduce the fields is to increase the overall effectiveness of the shielding.

>Fortunately, Macs are best-sheilded and filtered computers available. Perfect
>for the ham radio user.

The etch-a-sketch, er Mac, is fairly well shielded, but is not anywhere as effectively shielded as a Sun or AT&T 386WGS. The latter has a double metal case and finger stock at all the joins. The Sun 386i is also double shielded. I keep my scanner sitting on the Sun with no hint of interference. The Mac depends on coated plastic and a couple of flimsy shield plates. It *is* a tight box though, as many people who have had them overheat will attest. The aftermarket in add on fans is doing well. Mac IIs are better in this respect, but their separate monitors do tend to radiate a lot of hash. It's also harder to turn them over to smooth the sand back out when you tire of your "artistic" efforts.

While I firmly believe in helmets, I have a shattered Snell 90 that
probably saved my life in an encounter with a tree, I am puzzled by
your remark that the law requires rendering assistance. Is this a
Colorado law? Many states have "good samaritan" laws that *protect*
people who *voluntarily* stop to render aid, but I've never heard of
a mandatory aid law.

Subject: Re: Deer Claims Another; Thoughts

Some clarification:

I've received several responses to this posting from several newsgroups. Almost all of the responses assume that my posting was an argument for mandatory helmet usage. One respondent claimed to be an MSF instructor and was extraordinarily (even for the net) offensive. (even accused me of being a Christian! Well I never....!!!)

If you find words that state that I support helmet laws, you should get your vision checked. Or work on your reading comprehension.

The Cliff Notes version:

a. People who ride without helmets are, in my opinion, being stupid. (Riding without gloves, jacket, boots, long pants are also degrees of stupid.)
b. Your crash, if severe, will inconvenience or traumatize some people who don't deserve it. Their opinions about bikes & bikers count in the ballot box.
c. Deer shit happens. And it mostly happens at dusk and at night.

There are times to NOT ride. Is this one?

No! Today is Ride To Work Day!!! :-))

>

I don't want to be TOO picky but since when is calcium a metal? Gel
cells are lead-calcium? Is there some reference you could point out
so that the rest of us could read about them? I have the `GE Nicad Book'
which is absolutely invaluable in dealing with them and understanding
them even if much of what is presented is empirically derived. Is there
such a beast for Gel cell, Lead Acid, Lead Calcium or whatever?

Ken Cochran writes:
> Do UK regulations contain the concept of a control operator.
>

I just got my UK licence renewal and have the rules in front of me. Note, I'm not a lawyer, and get bored reading regulations, so don't necessarily believe my interpretations.

No, there is no concept of control operator, just Licensee. The purposes of the UK license are stated as "self-training in communication....of the Licensee" and "[meeting] the needs of international disaster communications". As part of the former, the Licencee may permit "representatives of a User Service" to use the licenced station. "User Services" are defined as various specific bodies, such as the British Red Cross and police forces.

In the British concept, both the licencee and his station are subject to the licence terms, including location of the station (though portable operation is permitted as is mobile. Note mobile and maritime mobile used to require a separate licence, as did ATV). There are no separate station and operator licences as in the US.

> Is there anyway communication with an unlicensed person is permitted
> if a licensed amateur has (remote ?) control over the transmitter
> used by the unlicensed person. ?

No. Section 2. (8) allows use of the station only by the licensee "personally", and *"in the presence of and under the direct supervision of the Licensee"*, use by another UK licence holder, someone who has passed the exams for a licence, but doesn't actually have one, a licensed ham from "any other country", and the User Service representatives I mentioned above. There are also specific prohibitions on use by certain types of low-life. Further, there are restrictions on who the licensee may talk to (or even listen to) that excludes unlicensed people.

Qualifiier: this applies to non-club stations. Club stations are allowed to have non-licenced people speak into the microphone, if a licenced person is physically present. The licenced person must operate the station and perform identification. A non-licensed person person may send "greetings messages" (whatever those are) of less than two minutes duration, only one to each station (?!), and only to and from stations in the UK, US, Canada, Falkland Islands (presumably not the Malvinas), and Pitcairn. I've been out of the UK for 10 years now, so don't ask me why this is the way it is.

In general, the UK regs are much more restrictive than the US ones, and things like phone patch are frowned upon. Having lived in the US, I can't see why they need to be, but it seemed to make sense when I lived in the UK.

Hope this helps.

> even though it is rescue traffic to me. This booklet suggests that this is OK
> since it has to do with potential loss of human life or property.
> (I would quote chapter and verse, but, I left it on the table at home.)

Why isn't this clear? If there's a body laying on the roadway leaking fluids
THAT is a potential loss of life incident. If it means you have to walk 50
feet to a call box and wait an hour like the rest of humanity, THAT is merely
an inconvience and doesn't justify using the auto patch.

If you want to use the auto patch to call a tow truck and save yourself some
inconvience, call a friend tell them what the situation is and have them call.

>

Who promised a flood of 10 year olds? I recall the argument was that
many people who could provide diverse technical contributions to amateur
radio were being kept out by the archaic CW requirement. Since the Technician
license was modified to eliminate the CW requirement, a large number of
interesting and technically diverse new hams have shown up on the local
repeater I use. These new hams are indistinguishable from the new hams
when CW was a requirement, and there are a lot of them. I haven't seen
a flood of 10 year olds, but I've seen a downpour of adults and teenagers.

I think that the same part of the youth population that would have
been attracted to ham radio in the past are now attracted to personal
computing as a hobby.

I can't really say that that "ham radio" is any more of a
"participation hobby" than "personal computing" is. It is probably
more a question of what is more relevant these days. Perhaps if the
emphasis was more directed to the more contemporary amateur modes and
operations (such as packet radio or AMSAT), it would be more
attractive to the kids.

At least that's how I see it. There were no real practical or
affordable personal computers in 1975 when I got my license at age 15.
If there were, I'm not sure things would have been the same.

The FCC thinks this is poor practice, too, you will note.

>There's more to patriotism than
>just waving the flag on the 4th of July; in part it's buying into the
>system, and working within it. If you think a regulation is wrong, or
>unrealistic, or whatever, the right thing to do is work to change it, not
>to ignore it or disobey it, hoping that the Government won't notice.

So, if you think that a regulation is wrong, the solution is to "work within the system to change it", i.e. draft a formal request for a rules change, have a lawyer well-versed in the appropriate laws and regulations look it over, and formally submit it to the FCC (be sure to include plenty of well-reasoned arguments). You don't call them on the phone and say "well, is it like OK to do this?" because they have neither the time nor motivation to research it carefully, and will answer conservatively. And once they answer the same question conservatively several times, there will come into being a bureaucratic inertia that will turn the offhand conservative answer into enforced policy.

That's the point.

That is the sort of cowardly logic that infects American business. Another way to look at it would be to sell as many general coverage receivers as possible. One of the reasons why those stupid bills never got all the way through was the fact that there are literally tens of thousands of receivers in the field that have no trouble tuning the cellular frequencies. All the ECPA and the lobotomised equipment has done is to underscore a range of frequencies that many people probably wouldn't give a second thought to if there wasn't so much fuss about them. What we have is bad law trying to patch bad technology. The cellular phone network is a very useful adjunct to society, but nothing will stop people from listening in except good digital encription and that will probably only stop the casual listener.

Source record: 286994

Sorry for the delayed PRO-43 response, I've been a little behind on my mail lately.

I'm an active scanner user, but can't afford the likes of the ICOM R-7100. Here's what I'd like to in a new scanner from the Shack (to get this at a reasonable price, I'm sure it'd have to be in a box the size of the PRO-2006, or larger).

- Signal strength meter, or a signal strength output jack (for connection to a voltmeter or A/D would be as good or better).
- AM, FM and WFM.
- Programmable steps (including 30kHz).
- Easy to restore cellular mod.
- RS-232 interface!
- Fast scanning! (combined with the 232 interface and signal strength meter would allow the beast to be used as a poor man's spectrum analyzer).
- PL squelch AND scan (if you've got PL decode in the box, adding a scan function can't be much more than a few additional lines of software).
- 1000 channels (or so) with user programmable bank size. If user programmable bank size is too much effort then 20 banks or more is desired (more banks, but each with fewer channels...perhaps even chainable banks). Personally, I'd find 10 banks of 100 channels each to be a real waste. 100 banks of 10 would be far more useful. Turning on/off multiple banks is MUCH easier than running through one big bank and locking/unlocking certain frequencies. I often run out of channels on my BC200XLT, not cause they are all full, but because I ran out of banks and don't want to put unrelated freq's into my police banks, or local fire bank, or media banks, etc...
- Dual antenna inputs with electronic switching (I could live without this).
- Frequency coverage similiar to the PRO-2006 would be fine, full coverage is preferred though (for spectrum analyzer purposes mentioned above).
- Capable of running from 12V.
- Sound Squelch
- Search lockout (so you can lockout unwanted signals while in search mode).
- If it has the 232 interface, then I guess there isn't a need for automatic search and store functions, etc. But...if the software developers get bored these would be great things to build in.
- Built in programmable bandpass filter.
- Up conversion to reduce image problems.

Hmm, I guess that about covers it. Okay, so it'd be too expensive. I at least wanted the folks at the Shack to see my "wish list". It never hurts to ask.

Aloha,
Dave N2RTU

PS - I'd have sent this directly to Paul (from Tandy), but I don't have his E-mail address.

Oh, one question, Why do most scanner start AM coverage at 118?? I find it very annoying since my local airport ATIS is at 110 MHz. That was a big reason I got the PRO-2023, it goes down to 108.

> Wally Blackburn
> wrb@ccsitn.att.com
> att!ccsitn!wrb

Nothing you can do by changing the feedline or pruning this antenna will
significantly improve its pattern or gain.

There's nothing magic about resonance. As you know, resonance is the
frequency at which the feedpoint reactance is zero. And it's nothing more.
There's no abrupt change in any characteristic of an antenna when tuned to
resonance -- performance is essentially the same at nearby frequencies. The
RG-59 is, as you stated, transforming the antenna impedance to something near

the 50 + j0 ohms your transmitter likes to see. As far as the line goes, non-unity SWR on a line this length won't hurt anything at all unless you're running a KW or more. (At high power levels, a cable the size of RG-59 might overheat or arc over if run with an elevated SWR.) For the same reason, putting a transmatch or network at the transmitter end to make your rig happy on 80 meters is fine, too. It won't hurt to prune the antenna, but it won't make it work one bit better. You're not giving up a thing by leaving the antenna as it is.

Hi,
I have about a *ton* of calcium-lead plates stacked outside my
office at this very moment. They're left over from a liquid argon
calorimeter we built for an experiment at Fermilab. Calcium-lead is *much*
stiffer than ordinary lead plates, and (I gather) is used in lead-acid
batteries where the plates are large/unsupported/both. The calcium is a
rather minor component in the plate, and is mixed in only for the rigidity
it provides. We had to roll these plates from .25" thick to .2", and we had
a fairly difficult time of it because of the hardness. Our sheet size ended
up being about 4' by 8', and we were able to stack them on their long edge
with minimal support.

That is correct. The charger senses the temperature rise in the battery
when it reaches full charge and shuts off.

The BP-5 and 8 are rapid charge batteries and will autocharge.
The BC-30 will charge all rapid charge batteries except the BP-7
(that requires the newer BC-35). The slow charge batteries need
about 15 hours for each charge.

(all from memory of times past BTW)

Source record: 287003

Just wondering.....

I don't have the handbook in front of me, but what are the standards
for the Readability and Strength signal reports? I am constantly
assaulted with silly reports like "five by one" or "five by zero"
where the operator on the other side seems to use his (her) S-meter
(now, THERE'S an accurate standard!!! :-) for the Strength report.
It's a bit silly since the "0" purportedly means zero signal strength,
thus impossible copy.

S-meter differences aside, and debates about the objectivity of such
reports reserved for another day, what are some of the standard definitions
for Signal Strength that we all use out there in ham radio land? I would
love to have some useful heuristic to help me give more meaningful
reports.

I stole the following text from the documentation from my amateur radio logging program for Amiga computers. Which was in turn copied from an ARRL operating guide available
to ARRL members free of charge (or at least it used to be free, a few years back when I got mine).

RST
sent "Readability Signal strength Tone"

R a digit from 1 to 5 indicating how readable the contact signal was.
1 unreadable, 2 barely readable, occasional words distinguishable,
3 readable with considerable difficulty, 4 readable with practically
no difficulty, 5 perfectly readable.

S a digit from 1 to 9 indicating the relative signal strength of the
received signal. 1 faint signals, barely perceptible, 2 very weak
signals, 3 weak signal, 4 fair signals, 5 fairly good signals,
6 good signals, 7 moderately strong signals, 8 strong signals
9 extremely strong signals,

T a digit from 1 to 9 indicating the purity of the tone of the
received CW. 1 sixty cycle ac, very broad and rough, 2 very rough ac,
very harsh and broad, 3 rough ac tone, rectified but not filtered
4 rough note, some trace of filtering, 5 filtered rectified ac,
but strongly ripple modulated, 6 filtered tone, definite trace of
ripple modulation, 7 near pure tone, trace of ripple modulation
8 near perfect tone, slight trace of ripple modulation,
9 perfect tone, no trace of ripple or modulation of any kind.

Note, some cw ops also optionally add a 'c' at the end to indicate the
presence of 'click'.

Body handling: HTML body converted to readable text

Usualy I don`t bother to respond to very nuch that I read on this net but the following is just enough to deserve a response.
Mister Miller writes:

As if she were wearing a helment she would not have hit the deer?
Or is she would not have the head neck and spinal injuries?
Or is it if she were wearing a helmet none of the above would have happened?

Well let me say after 25 years of riding a motorcycle mostly with out a helment and a lot of dusk/night riding, if you hit a large deer at 55 miles per hour on a bike or in a car you are going to get hurt wheither or not you have a helmet on.
Some years back I had the oppertunity to set-up and run a lot of helments thru the Z90 and Snell specification test for DOT approval. In doing so I became some what familiar with just how effective the helmets were at saving lives and decreasing the risk of injury incase of "accidents". I also got involved with some of the more spectacular "accidents" that wound up in court.
I came to the conclusion , after reviewing several cases, that like seat belts in a car about 50% of the time the helment contributed more to the injuries than would have been the case if the helment had not been worn.
I saw cases where the helment had snaged on the road way or another vechical protrusion and snaped the victims neck or broke both clavicals. Another case where the helment caught on fire and killed the guy wearing it. I saw cases where the helment had caught on parts of the bike being ridden and caused severe damage to the rider. To be fair I also saw cases where the helment obviously save the rider from more severe injuries. Such as one case where the rider was wearing a helmet ad ran into a barrier, the bike stoped, he did an endo landing on his head on concrete and skidding upside down for several yards before flipping over on his backside and finishing up in a ditch.

The ideas here are prudent.

< The "cost to society" argument for helmets tends to be rather easily dismissed.

Well, Calcium has always been a metal. It is in the same column (IIA) as
Beryllium, Magnesium, Strontium, Barium, and Radium.

Calcium is one of the Alkaline Earth Metals. All of these are very light,
very reactive metals with 2 electrons in their outer shells.

The reason that you might not think of calcium as a metal is that you probably
have never seen metallic calcium. It looks just like aluminum, but is a bit
"whiter" in color. It is quite soft, and burns in the presence of water!
When Calcium is burned in water it forms Calcium Hydroxide, a strong alkali
that is similar to Sodium Hydroxide, which is commonly known as Lye.

>bill KB3YV

A really GOOD point, Bill. This is what a lot of hams miss when looking at property...the bargaining power they might have. The moral: ALWAYS research the deed and review all the restrictions AS WELL AS the local ordinances. The deed restrictions are MUCH HARDER to fight, as they are part of the "contract" you agree to when you buy the property (as viewed by the Courts). Our sense of fairness is occasionally offended here in So. Calif. (and elsewhere) where there are very few places that do not contain deed restrictions. The whole market becomes one of "take it or leave it" respecting deed restrictions. That is a hard problem, and only the market can eventually (hopefully) shake it out. But the only sure bet to protect your ham antenna privileges is to obtain a deed without all the restrictions up front.

I recently installed one at one of the Worldnet sites. I am a little skeptical of the durability but I guess the price is low compared to a real (commercial) repeater antenna.

As the one on top of the 200' tower I must say it's extreme light weight made installation relatively easy. I was able to hold the antenna in one hand and fiddle the clamps with the other.

We put it at the top of the tower so the top of the antenna is free to swing. Initial performance was good.

The proof will be to see how well it survives the winter.

I've received a request from a foreign repeater society to recommend a "dream repeater" configuration for 2 meters with recommendations for the actual repeater, antenna, controller, duplexer, power amplifier, back-up power supply etc. Any suggestions wil be appreciated. Will summarize if the response is interesting. 73, Philip (W2XP)

The poster might be an EMT. While ordinary citizens (as well as
doctors) are not required to stop to help, EMT's are. One thing to
keep in mind is that some "good samaritan" laws are designed to
protect doctors who stop to help (i.e. I didn't give informed consent
to receive medical treatment) not ordinary citizens. I believe that
NY is one of these states (at least this is what was taught in my Red
Cross First Aid course a number of years ago).

In Alabama, you are _required_ to stop and render assistance if you
cause the accident, and I believe that the same law has been
interpreted to require you to stop and render aid if you _see_ an
accident.

Of course, this is Alabama.

Actually, it was HAM and SHEM. But they didn't work such an advanced mode as CW. They worked voice on a local repeater network: two cans connected via a string... :-)

|> are practically worthless in such a stale condition...

Well I don't know why this is happening, but for some reason the last few sets of TS Kelso numbers haven't agreed with the amsat numbers. One set puts AO-13 in one place and the other somewhere not even close. I first noticed this on Field Day. AO-13 didn't show up! Going back to three month old numbers saved us. I FTPed from the site TS Kelso's postings points to and got the same bad numbers for AO-13.

Using TS Kelso numbers about three weeks ago I found that AO-13 shouldn't be visible, but it was. Using the amsat numbers placed AO-13 somewhere completely different, but visible. I can't tell you that the position was right on, but at least it was right about AO-13 being visible. And it was AO-13, I copied the RTTY beacon to verify that I was hearing AO-13 not AO-10.

Now I use the amsat postings. I save the Kelso numbers too, but I don't use them unless the agree with the amsat numbers for AO-13. The strangest thing is that sometimes they do and other postings don't. I alway make two runs and keep the Kelso numbers only if they agree with the amsat numbers. What is going on? Is NASA confusing AO-13 with another bird or something?

Mark

jmaynard@oac.hsc.uth.tmc.edu (Jay Maynard) writes:

>Is there a real new approach out there?

Of course there is. Having been a teenager less than a decade ago myself, I can tell you that new technology is *very* attractive to someone of that age group; it gives you something to talk about with your friends. There is a definite social phenomenon that supports high tech hacking groups, and that is the need for teenagers to fit in with a group. Communications technologies expand the size of that group. The folks I ran around with in junior high and high school were a bunch of MECC/MTS hackers from all over the state of Minnesota.

I was always peripherally interested in ham radio, but two factors were responsible for redirecting my attention elsewhere. One was the CW requirement, which seemed antiquated and silly. The other was the difficulty in finding anyone under the age of 30 who was interested. Hanging around with a bunch of old Pheezers doesn't do much good for your image.

Clearly nothing can be done directly about the latter factor; we're stuck with the demographics we have. The best that we can do is to make the service more attractive to *groups* of teenages, not necessarily individuals.

Bob, Phil and others have proposed numerous such changes over the years here. The codeless tech is probably the most obvious one. Less obvious work has included dumping the antiquated content restrictions, and the HF packet STA.

All of these proposals involve change, and nearly all of them have been met with considerable resistance and denial, especially by organizations that should have known better.

Note, some cw ops also optionally add a 'c' at the end to indicate the
presence of 'click'.

As I recall the "C" is for chirp.
the "K" is for click.

How would one designate those CW signals that sound like Whoop whoop? A RST
with a W on the end? 8-) Actually this is a semi serious question. What are
the technical reasons for those signals going whoop whoop? Almost impossible
for me to copy by the way.

73!

July 10,
1992
PRE-ANNOUNCEMENT ADVISORY NOTICE

COMING SOON, the neatest and most powerful scanning tool ever created!
The
HB-232 Scanner/ Computer Interface turns your PRO-2004, PRO-2005 or
PRO-2006
scanner into a TOTAL SYSTEM with power that equals or exceeds anything
comparable in the most expensive World Class radios to date! So many
features
and powerful possibilities are available that it is impossible to
discuss them
all here, but following is a brief presentation enough to convince you
that an
awesome performance package is about to make an unprecedented debut!

The HB-232 Scanner/Computer Interface connects between a
PC/XT/AT/386/486/clone
computer (512-k min) and the scanner. A standard serial cable connects
the
HB-232 to the computer's COM port. The HB-232 can be installed inside
the

scanner for a tidy package, or it can be installed in a small project box, with a short cable and plug to mate with a receptacle mounted on the scanner. A serial cable connects the computer to the box. This latter method permits use of the HB-232 with more than one scanner! The scanner is not appreciably modified in either method; rather, 20-wires are connected from the HB-232 to various points in the scanner. Absolutely no scanner features or performance are altered or lost! Now here is what the HB-232 can do!

* Auto-magically download up to 400 frequencies at a time into the memory channels of your choice in the scanner, along with any desired custom settings such as DELAY, MODE and LOCK-OUT. The time required to auto-program the scanner with 400 custom configured channels is less than 9-minutes! (Try to program 400 channels by hand in any time under than an hour or two, and WHAT IF you find a mistake with your channels out of sequence back on Ch-30?)

* See and control every standard keyboard function from the computer! Your computer monitor displays a facsimile of the scanner's keyboard and the LCD Display area. Whatever shows in the scanner's LCD Display at any given time is simultaneously displayed on the Monitor. Press M on the computer keyboard for MANUAL; or press S for SCAN; or press P for PRGM. All 29 keys of the scanner's keyboard are active on your computer's keyboard! Anything and everything that shows in the scanner's Display also is displayed on your Monitor screen. The scanner is operated straight from the computer keyboard exactly as it is operated from the front panel. In fact, you can operate from either location simultaneously at any time.

* AutoLog to a text file every event that the scanner sees! For instance, in the AutoLog mode, every time the SQUELCH breaks (a signal comes in) the computer writes & appends a line to a text file that contains the channel number or

SEARCH Bank; frequency; mode (NFM, AM or WFM); DELAY setting, On or Off; SEARCH
increment (if applicable); Date; Start Time; and Duration of transmission! This
file is "comma-delimited" to make it exceptionally easy to load it into your
favorite database manager for further processing & sorting as desired!

* Anti-Birdie Function, when activated, compares the frequency that the scanner
stops on to a "birdie file", and instantly resumes SCANning or SEARCHing, if
that frequency is in the file! Thus, the scanner will never again lock up on
"birdies", if you don't want it to. Neither will it AutoLog momentary "birdie"
stops! This superb feature is not limited to just "birdies"; you can put any
number of other undesired frequencies into the "birdie file", such as for
pagers, computer data channels, continuous tones, encrypted signals, and any
other frequencies that you don't want the scanner to stop on or to AutoLog. In
fact, there are even ways to automate the collection of undesirable signals for
adding to the "birdie file". Gone are the days of obnoxious lockups on
uninteresting freqs.

* The HB-232 generates its AutoLog files in the same format that it needs for
programming. Therefore, an AutoLogged SEARCH file can be programmed back into
memory channels for a powerful SEARCH & STORE feature.

* The HB-232 comes with a powerful "scripting" or macro feature to allow you to
automate virtually any process that you would normally do by hand. The
scripting feature can be used to generate a file of what's been programmed into
the memory channels; to set a time limit for stops on various frequencies or
channels; to lockout every frequency found during a SEARCH session so that
duplicate log entries can be avoided; and the possibilities just go on and on!

* The HB-232 includes four user-definable switches that can be controlled from
the keyboard or through a script! These switches are useful for controlling any

modifications that you may have added on your own, including extended memory
blocks, automatic tape recorder switches; data/tone squelch; and you can even
wire one of these switches to control the stock SOUND SQUELCH function, if you
want. Another switch can be wired to give access to the scanner's back-panel
RESTART function! A little work in the scanner could allow you to use one of
these switches for the ATTenuator switch on the scanner's back panel, too! The
possibilities are nearly endless!

* The HB-232 comes with an easy-to-use built-in text editor to help edit your
AutoLogged and AutoProgram files and any other text file, for that matter!
Features and benefits of the HB-232 Scanner/Computer Interface are simply too
numerous to continue with here in this limited space.

Now I have to tell the rest of the story ......the bad side! Really, there
isn't a bad side, but if anything at all must be said against the HB-232, it's
that it comes ONLY as a Kit of Parts and a Program Disk. You have to build and
install the HB-232 yourself or have someone to do it for you, if you can't. The
HB-232 Kit includes a professional printed circuit board, one Motorola
microprocessor chip and special socket, six other IC's, four resistor networks
(similar to an IC), a quartz crystal, one discrete resistor, and fifteen
capacitors. NOT supplied are the required serial cable; five common IC sockets
(four 14-pin DIP and one 16-pin DIP); wires, plugs, connectors; tools, solder,
project box (if an external installation is desired), etc. The functional part
of the HB-232 Kit is complete, however. Depending on your skills and ability,
it will take 2-4 hours to assemble the board and 2-6 hours to install it. Add
to this another 1-4 hours for preparation. Assembly of the board is
straightforward and requires only basic soldering skills and the ability to
match component locations with a parts location diagram; easy enough.
Installation, whether in a project box or internal to the scanner, is a bit more
technical, though well within the capability of the electronic hobbyist.

The
finished HB-232 board measures 3-1/8"L x 2-5/8"W and the thickness of
the board,
counting all parts mounted thereon is about 1/2".

The PRO-2004 is the easiest scanner in which to do the installation,
because all
wiring points are readily accessible and identifiable. The PRO-2005 &
PRO-2006
are easier than the PRO-2004 in twelve of the wiring points, but five
wires have
to be tack-soldered on the BACK SIDE of the Logic/CPU Board that's
mounted
inside the front panel of the scanner. This is a straight- forward job,
but
might intimidate the scannist who has never removed that board before.
Still,
the directions are methodical and clear enough and the main requirement
is only
PATIENCE and the ability to locate five solder pads on the board from a
picture
that's provided. Frankly, the hardest overall part of the job is the
fabrication and wiring of the PCB. So it's mostly time consuming, but
if you
are patient and can handle a soldering pencil and do a little mechanical
work,
then this project is not beyond your scope.

Since there is practically nothing in the scanner to modify (other than
solder
wires to specific points), it is unlikely that serious harm will be done
to the
scanner, even if you err. I and others who have tested the HB-232 have
all made
errors of one sort or another in the development of the HB-232 and not
yet has
any irrepairable harm come to either the HB-232 or the scanners!

So what now? The HB-232 is not available for sale yet, but it is in the
final
stages of "Beta Testing". Pre-announcement will be available upon
conclusion of
the Beta Test, starting in late July or early August. Discount prices
will also
be available until the formal announcement probably in September or
October.
The discounted "Charlie Test" price, will be $129.95 + $5 S&H.

I suspect there will be limited quantities of the HB-232 for a while
because of
the expensive and hard to get microprocessor chip, but I will be happy

to accept
advance reservations for the HB-232 on the condition that you make a
deposit of
$25 and be willing to wait for delivery through at least the end of
August. A
refund of your deposit will be available for the asking any time before
shipment
is made. You can also reserve an HB-232 Kit without a deposit, but it's
first
come, first served to those who make a deposit and then to those who are
on the
no-deposit reserved list. If you are not able or willing to build and
install
the HB-232 Kit, I can be available to do it for you. The cost to build
the
board only (you install it) will be $50 plus the cost of the Kit.
Installation
inside the scanner, including building the board will be $150 plus the
cost of
the Kit. Construction and installation of the HB-232 in an external
project box
and the necessary wiring of one scanner will be $225 plus the cost of
the Kit.
Additional scanners can be wired to accept an external HB-232 for a cost
of $50
per extra scanner. Return shipping for all scanner installations will
be
$12.00, and shipping of Kits or fabricated circuit boards only will be
$5.00.

You might be interested to know that while the first HB-232 units will
be
available only for the Realistic PRO-2004, PRO-2005 and PRO-2006
scanners, there
is a good chance that the developer can adapt the HB-232 to the Uniden
BC-760/950XLT, BC-590/600XLT and the Regency R-1600. For the latest on
this and
other developments of the HB-232, contact us by US Mail or at our
Computer BBS,
the Hertzian Intercept, between 6:00pm-1:00pm, PDT, at (619) 578-9247.

This varies from state to state. In Texas:
EMTs are not required by law to stop and help. There is some case law that suggests that someone who is identifiable as an EMT (by a car sticker, for example) who does not stop at a scene may be held liable for problems caused by the delay between the time he passes up the scene and the time EMS personnel arrive, but this is a bit sketchy.
The Good Samaritan law protects anyone who acts in good faith at a scene; if that person has medical/EMS training, he will be held to the same standard of care as if he had a duty to act, but he's protected as long as he adheres to that standard.

FWIW, I strongly support helmet laws; there's a 100% correlation in my experience between survival of serious motorcycle accidents and helmet use, and I've cleaned up too many dead motorcyclists off the road.

>well, people are living longer and most people tend to be amateur radio
>operators for the rest of their lives once they enter the program.

Right. Think about it: What if amateur radio was drawing new members continuously, an equal percentage of each age group? That is, .01%/yr of the 0-5 age group, .01% of the 6-10 year olds, .01% of 11-15, etc. etc. In a few decades, the average age of the ham population would be much greater than the population at large. Since most people keep their ham licenses indefinitely once they pass the test, we will always be older than the average.

I've always thought the 'whoop' was caused by a 'soft' power supply.
Eg before key up, the filter caps are all fully charged.
After key down, power drain causes the weak power supply voltage to drop.
The osc is sensitive to voltage and presto whoop. The pitch change of the whoop
dependant on wether the osc goes up or down and your offset from the carrier and
the kepplairian numbers for the sump..... well what ever.

what is a 73's, me no use em?

73

Oh, probably not as harsh or petty as that one liner I wrote. Years ago, I decided such flames generally weren't worth the ulcers, so I stopped writing long flaming diatribes. The exception has been when someone decides to roast someone instead of dealing with their arguments. Even then, I try to give fair warning of what's coming, something I neglected to do with that particular posting (rot13 does have its uses).

> Intellegence is no excuse for antagonism, though. If he

I agree with this - the absurdity is that, at least concerning my 9 year old, young people have no problem with CW - my daughter took one day to memorize half the alphabet and still remembers it a year later with very little practice in between. The written exam is another issue. 9 and 10 year olds do not usually have sufficient math background to be able to perform some of the calculations on the Tech exam. In 3rd grade they finally learned to multiply and a touched on division.

I expect to see most kids in that age range to enter ham radio as Novices. No-code tech is best for those who are old enough the understand the technical questions and don't care to learn CW.

Have you ever seen what happens when a car travelling 60+ MPH on the freeway hits a stopped car? PEOPLE DIE, that's what.

The California Highway Patrol and many other such agencies consider a car broken down on the freeway (even if it is out of the main traffic lanes) to be an immediate threat to life or safety of property, which is the definition of an emergency. If you don't feel safe, make the call.

Use the autopatch and call the towtruck to get you out of there. If (one chance in a thousand) you get a letter from the FCC asking about it, just tell them you feared for your life. In my experience, the FCC, unlike most armchair ham lawyers, are reasonable people.

You are on the scene; you are best qualified to judge the urgency of the situation. Some drooling old fart sitting at home with his fat ass in the easy chair second-guessing the degree of danger YOU are in clearly isn't.

Do what you have to. It's an emergency!
- Brian

Gee, sounds like you are hearing "chirp", Jeff. At least that is the closest I can come to interpreting the "whoop whoop". Does the CW signal seem to change frequency with time after the intial "on"? This would be "chirp". (Often the result of dying battery on a battery powered rig, or other power supply / RF feedback problems.)

1054. Callsign Tapes Now Available

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 00:23:40 UTC
From: flloyd@sunburn.West.Sun.COM
Message-ID: <l6rv0clNNrmn@west.west.sun.com>
Source record: 286898

* * * Callsign Project Update * * *
* * * THE TAPES HAVE ARRIVED! * * *

After much waiting and anticipation, the Summer update of the callsign database is IN. The latest dump contains 568023 entries in 54 Megabytes of data. Our recent aquisition has enabled us to offer the most up-to-date copy of this information available.

We're currently in the process of making copies of the database for all those interested. Due to aquisition costs, we must ask for a $20 contribution for each copy made. In addition, those ordering copies must supply the media (tape) and pay for shipping both ways.

The preferred tape format is the QIC-150, 150 megabyte quarter inch cartridge. We can also write Exabyte 8mm, QIC-24, and 1/2 inch/9track tapes. TAR format will be used unless otherwise specified. (We can also do dd if all you want is the raw data, e.g. no programs).

In addition to the callsign database, which is a 54 megabyte flat file, we'll also be supplying 'C' source code which does creates indices and performs fast (bsearch) lookups based on callsign or name.

Source to a complete, working callsign server program is included. All source code was developed on a Sun, and is ANSI-C compliant.

If you'd like a copy of the complete package, here's what you shoud do:

1. Prepare a self-addressed and postage prepaid return mailer containing your blank QIC-150 (preferred) tape.

2. Enclose a note indicating your name, address and any special handling or formatting instructions. Please also include your e-mail address if you want e-mail confirmation of your order.

3. Enclose a check for $20 payable to Fred Lloyd

4. Package the above and send (mail, UPS, or FedEx) to:

Fred Lloyd, AA7BQ
8215 E. Wood Drive
Scottsdale, AZ 85260

We have had excellent results with first class mail, and it is very convenient for us to use.

If your tape is QIC_150 and TAR format, it will be processed within 2 days of our receiving it. Other formats will be processed ASAP, with Exabyte being the next best. 9track 1/2 inch tapes take a little

more time.

Thanks,

-fred

+Is the ARRL purely an *amateur* radio organisation? Is there anything
+in its constitution to suggest this?

Maybe it is a ploy to bring in more revenue. If they have too many life members, they may not be getting in enough yearly income per member. I can see it now: "I'm sorry, but you were a life member of the ARRL which is now defunct. We are the AARL. If you want to join, the cost is $30/year".

[For the humor impaired: the above was a joke].

==========
Love is a word that is constantly heard,
Hate is a word that is not.
Love, I am told, is more precious than gold.
Love, I have read, is hot.
But hate is the verb that to me is superb,
And Love but a drug on the mart.
Any kiddie in school can love like a fool,
But Hating, my boy, is an Art.

Message-ID: <1992Jul23.024702.6349@cs.yale.edu>
Source record: 286940

There is some precedent for keeping a slightly antique name like the American Radio Relay League. The main professional association for computer science is the Association for Computing Machinery. The ACM periodically has to deal with suggestions for a more "modern" name, perhaps one that emphasizes software or systems. (Most computer scientists know little about "machinery" these days. They are appliance operators like a lot of hams; the emphasis is on software, algorithms, protocols, etc.)

ARRL and ACM, as names, point to the tradition, origin, and history of the organizations. I think that's worth keeping. Arguments about the cost of new letterheads, etc. seem rather unimportant by comparison.

1060. AURORA WATCH: Middle Latitude Auroral Activity Watch

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 03:24:14 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.711861854@honte>
Source record: 286944
Cross-posted to: sci.astro,sci.geo.meteorology,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

ISSUED: 22:00 UT, 22 JULY

/\

VALID UNTIL: 19:00 UTC ON 24 JULY

MODERATE RISK PERIOD: 22 - 23 July (UT days)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL LUNAR INTERFERENCE: LOW, BECOMING MODERATE AFTER LOCAL MIDNIGHT

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO CENTRAL OR SOUTHERN
MONTANA TO NORTHERN SOUTH DAKOTA TO CENTRAL OR SOUTHERN MINNESOTA TO
WISCONSIN TO MICHIGAN TO NEW YORK TO SOUTHERN MAINE AND POSSIBLY
PARTS OF NEW HAMPSHIRE.

SYNOPSIS...

Auroral activity has increased in magnitude over the last six to twelve
hours in response to a high speed solar wind stream emanating from a
large and well placed solar coronal hole. The stream is expected to
maintain present levels of auroral activity for approximately the next
24 to 36 hours before beginning to subside.

Conditions will be moderately favorable for observations of auroral
activity prior to moonrise near local midnight. Thereafter, lunar
luminosity will begin to interfere and hamper attempts to view activity.

Most of the activity should remain confined to the northerly middle and
high latitude regions. Polar twilight over the high and polar latitudes
will also hamper attempts to view activity over Northern Hemisphere
regions. Other areas which may be able to spot activity under dark
skies include southern Australia, southern New Zealand, the northern UK,
northern areas of Europe and areas of northern Siberia.

This is not expected to be a significant auroral event. No low latitude
observations of activity are expected.

This watch will remain active until 19Z on 24 July when it will either
be updated or allowed to expire.

** End of Watch **

1061. Need 6-pin plug for Kenwood TR-7800

1063. Comments on Diamond X-500HNA for Repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 06:01:55 UTC
From: fletcher@moho.uwyo.EDU
Message-ID: <9207230601.AA15728@ucsd.edu>
Source record: 286946

Two 70cm repeaters have been running A/B comparisons between a Diamond X-500HNA and a Celwave Storm Chief PD-458 (no beam tilt) for about a year here in Laramie, WY. Both are located at the same location with the antennas at almost equal height (the Storm Chief is 5 feet lower) on the same tower. The active areas of both antennas rise completely clear of the top of the tower structure. Both repeaters have had each antenna connected to reduce prejudiced conclusions due to varying receiver characteristics.

The Celwave is a very heavy antenna. Installation on outriggers (using a gin pole) would be impossible without two people to manhandle it. I had to struggle a little to get it bolted to the tower itself. The Diamond can be held vertical by the bottom in just one hand for a brief time.

The published gain figure for the Diamond was 11.7 db vs. 8 dbd for the Celwave. Celwave shows the gain reference in their catalog. Since I have never seen what the gain reference is for the Diamond, and judging from my observations, I suspect the Diamond is referenced to a quarterwave or possibly the elusive isotropic radiator. The PD-458 is just short of 15 feet long. The Diamond is a smidge over 17 feet long.

The Celwave seems to outperform the Diamond when the repeater is accessed by mobiles. When on the fringe, a mobile can key the repeater with the Celwave but not the Diamond. In some spots where the repeater can be keyed but not held with the Diamond, QSO's *can* be had with the Celwave. Handhelds reveal no appreciable difference in performance. For a time one of the repeaters used an older Andrew land-mobile antenna. It was rated at approx 1 db less gain than the Celwave. There wasn't any discernible difference between the Andrew and the Celwave.

Both antennas have survived three (gusts to) 70 MPH winter wind storms. The Celwave could not be seen to flex. It's very rigid. The Diamond was bending 60 degrees from vertical repeatedly for several hours at a time. A DB products DB224 was damaged during one of the storms. The Diamond still seems to work just fine on 2m and 70cm. I haven't taken it down recently for visual inspection because my back isn't up to the task.

The climate is very dry so moisture (therefore corrosion) has not been a major issue. I do plan to replace the foam spacers with delren or teflon and at some point silver solder the crimp joiners for the internal elements.

I wouldn't consider using a Diamond for an antenna in a mountaintop installation around here. The winters would eventually kill Diamonds just like they kill the commercial Ringos (CRX-150B). They even ruin the big bucks commercial stuff (Prodelin, Andrew, DB products, ...) with to much regularity. I got the Celwave for a mountaintop (11,800 ft., rime ice, *BAD* winds). I have my doubts it will survive in that location more than a few years. I hope

I'm surprised.

I would purchase another Diamond given the right circumstances. For a repeater that many individuals rely on, I'd get the Celwave.

>The GPS 50 sells for about $899, and I can't imagine what the extra $400
>would buy.

Two things. One, a difference in quality. "The Garmin GPS50 isn't as ruggedly constructed as the Magellan Nav 5000 and is a bit more difficult to use" (Practical Sailor, June 1, 1992). Second, the Magellan provides for multiple "map datums" (I know, the plural of datum is data, but that's what they call it). If you're using it for navigation, and you're using a single map datum that's different from the chart you're using, you can end up a mile or more off course--and on the rocks.

>The thing is very
>accurate, the 50-100 feet seems to be correct, although altitude is less
>accurate, but I can't see how it can be so accurate with respect to where it
>is and be so far off with respect to where the sats are, although it is
>possible that the error is in the sat tracking programs, since I don't think
>they are quite so good on sats that far away (these are nearly out as far as
>geostationary sats), traksat sometimes bombs out on geosync sats.
> Another thing that's interesting is that if I walk reasonably fast around
>my yard carrying the GPS 50, it will tell me what direction I am walking
>and how fast, with updates about once per second, and yet I obviously
>haven't moved 50 feet in that second, so it must have a relative precision
>that is better than the 50-100 foot accuracy.

"Selective Availability" (SA) has been turned on almost continuously since the Gulf War (when they had to turn it off, because they were using so many "civilian" units!). SA "degrades GPS accuracy to only 100 meters 95 percent of the time and 300 meters the other five percent of the time. Despite claims of considerably better accuracy by GPS manufacturers, that is the best accuracy you will be able to realize on a consistent basis" (Practical Sailor, March 1, 1992).

SA also affects the speed and bearing readings you get, and the log as well. A friend accidentally left his on while his boat was at the dock, and when he returned discovered that the boat had travelled (supposedly) several miles, simply because the GPS kept getting slightly different readings!

From: cvm@nauvax.ucc.nau.edu
Message-ID: <23JUL92.10230220@nauvax.ucc.nau.edu>
Source record: 286973

The last time I posted a question about building an antenna I got such great response from the net, that I thought I would try it again. I have been using my home built 2m j-pole for awhile and am very pleased with it. Now I would like to build a small 2m beam. Something like a 4 element yagi would be great. Does anyone know of sources or have the plans for such an antenna?

1067. Re: AARL vs ARRL

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 12:17:22 UTC
From: ham@wam.umd.edu
Message-ID: <1992Jul23.121722.17827@wam.umd.edu>
Source record: 286949

Besides, if the ARRL changes its name to the AARL, everyone's QSL cards will have to be reprinted because the ARRL logo will be invalid. Think of the costs to amateurs throughout the US! And will Canada follow suit by changing to the CARL instead of the CRRL? I think not.

Seriously, if the ARRL thinks that changing its name to the AARL is going to boost the ham population, they are becoming too much like government:

1) How many non-hams care what ARRL/AARL really stands for? Does the ARRL actually think that the ARRL is what entices people to join the ham ranks? No, it's the hams that introduce ham radio, and whatever their organization is called won't make a shred of difference.

2) Changing the name of an organization doesn't change its population or what it does. It just changes its name - reprinting letterheads, making people remember something new, etc.

Can you imagine if Canadian hams joined CARL? How about Canadian Ham Amateurs Requiring Lots of Extra Services, or "CHARLES?" Working for a government agency, you can have lots of fun with acronyms...

1068. Re: Is it "business" if I use and autopatch to...

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 12:26:21 UTC
From: kstuart@oasys.dt.navy.mil
Message-ID: <22643@oasys.dt.navy.mil>
Source record: 286950

With regard to the business/non-business issue of certain autopatch calls, like calling a tow truck for a breakdown, I'd like to pass along information which I received a couple of years ago.

ARES/RACES MEMBERS TAKE NOTE!

I spoke with attorneys at the ARRL, as well as the FCC field office, with regard to this very issue. The concensus was as follows.

The ham radio service was not intended to be used for the benefit of business operations (no surprise there..), but the FCC does recognize the occasional need for communications with businesses WITH BUSINESS BEING DISCUSSED/TRANSACTED when it is in the interest of public safety OR WELFARE. Calling for a tow from an auto club falls under that category.

The particular incident which prompted my discussions with the League concerned the temporary shelter of victims of an apartment fire. About 20 families were affected, and the ARES/RACES director at the scene was calling motels via autopatch to find rooms for the victims for the night. Availability of rooms was discussed, and reservations were placed via ham radio. So the club, with the idea of applying the dreaded WOUFF-HONG to the EC's more vulnerable body locations, had me call to get the "official" standing on the issue. However, the response from the attornies was not what was expected. I was advised that the EC was justified in the use of the autopatch UNDER THOSE CIRCUMSTANCES since the EC was acting for the welfare of the fire victims - no lives or personal safety were involved, but the welfare of the people was being protected - and therefore the use of Ham Radio was OK.

The point is, the FCC expects us to use common sense. Obviously they don't want us to place carryout orders at the local Burgerburp restaurant via autopatch, but they also realize that calling for a tow truck on a highway is an occasional necessity and protects the welfare and safety of human beings!

Hi John, and World,
Yes, I put one up at the Fitchburg Repeater site.
As you said it seems to be a bit light for survival in "real" winds. But it
works well so far after about a year.

Tom

1071. Re: Deed restrictions banning ham antennas

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 14:03:46 UTC
From: waco@cbnewse.cb.att.com
Message-ID: <1992Jul23.140346.14497@cbnewse.cb.att.com>
Source record: 286968

This probably belongs in .policy, but is being posted here as most of the other postings were here.

Some random thoughts on deed/homeowner association CC&Rs.

1. I don't think restrictions are generally able to be removed via negotiation; congrats to the ham who could do so.

2. You may not have the opportunity to research them before signing a contract to purchase a home, as was the case for me and my present home (ran across it on a Saturday while driving around for a quick look at some real estate listings; it was for sale by owner -- came back Sunday for a 2nd look and signed a contract). However, you can do what I did. I wrote a rider to the contract stating that if there were any CC&Rs or village ordinance prohibiting towers and/or antennas, the contract would be void. The seller did not object. The next day I obtained a copy of the village ordinance regarding antennas and towers.

Also, please note that some municipalities consider towers to be "structures" and treat them just like they would a storage shed or garage. This can be to the disadvantage of the ham because they usually have height restrictions that are applicable for buildings, but not antennas and supporting structures.

3. While it can't hurt to press the FCC to extend PRB-1 logic and rules to CC&Rs, there is probably a better way. Get Congress to modify the Communications Act. Congress makes the law and the FCC is charged with implementing it. I would think there would be fewer lawsuits; PRB-1 is challenged often and judges sometimes rule against the ham and for the restrictions in spite of PRB-1 -- BUT YOU WOULD NEVER KNOW IT BY READING QST -- c'mon, ARRL; give us the good news with the bad!!

This is basically what invalidated CC&Rs disallowing minorities to live in certain neighborhoods. Having been a title officer in a past life, I was amazed that at one time almost every subdivision in the western suburbs of Chicago had deed restrictions against blacks living in them except as servants. The Civil Rights Act prohibited enforcement of the restrictions which were not necessarily removed from deeds.

4. I feel it is important to our hobby to remove these restrictions. It is very rare nowadays around this area to find a new subdivision that doesn't prohibit outside antennas. This is usually not for RFI problems, but for aesthetic purposes; don't we all want politically correct neighborhoods and be free from the having to gaze upon "unsightly" TV, satellite and amateur antennas?

5. There must be some legal eagles out there who have the time and inclination to research this problem to see if the data support the FCC's conclusion that CC&Rs are part of a negotiated contract, or are in most cases a "take it or leave it" proposition.

6. Individual hams can help by always asking the question when looking for property and making sure their opinions are strongly expressed to developers, builders, real estate agents/brokers and village officials when they find restrictions. Hams have been instrumental in obtaining exemptions from scanner laws through many state legislatures rather than the FCC. This approach should work at the federal level also.

In article <"22-Jul-92.10:13:37".*.Don_R._Moberly.El_Segundo@Xerox.com>
Don_R._Moberly.El_Segundo@xerox.COM writes:

Usualy I don`t bother to respond to very nuch that I read on this net but the
following is just enough to deserve a response.
Mister Miller writes:
<The unhelmeted motorcyclist had been riding along and had hit and killed a
(big) deer. She had head, neck and probably spinal injuries. >

As if she were wearing a helment she would not have hit the deer?
Or is she would not have the head neck and spinal injuries?
Or is it if she were wearing a helmet none of the above would have happened?

Before buying into the helmet lobby or anything else where the politicians
are going to protect you from your self, ask your self who`s pockets are
going to get lined this time. The current helmet laws in California are a good
example of how a strong lobby can increase sales of any product. Helmets do not
keep people from doing stupid things on motorcycles. One moment of
inattenitiveness, or stupidity is going to hurt you on a motorcycle. Most
accident I have seen involving motorcycles could have been avoided if the
rider had been paying attention to the business of riding. In order to ride
safe you have to ride smart.
Just keep one thing in mind like seat belts, helmets are only about 50%
effective.

As a rider I would like to add a bit to the discussion:

- Helmets, like seat belts, are a good idea.

- Mandatory helmet laws, like seat belt laws, are a bad idea. The
"cost to society" argument is lame because to be fair it should be
applied to things like smoking and from there to any number of things
that would quickly become absurd.

- Helmets allow you to use the radio motorcycle mobile.

You can fix it by retuning until the signal goes "weeoo-weeoo", or "wooee-
wooee". :-) Semi-seriously, I'd report it as a "C" for chirp.

1078. need addresses

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 14:41:11 UTC
From: wb9omc@dynamo.ecn.purdue.edu
Message-ID: <wb9omc.711902471@dynamo.ecn.purdue.edu>
Source record: 286963

I wonder if anyone out there with a 92 US callbook and/or supplement could look up the following calls for me:

KC4EW
KE3DK
KB1ADT

They are not listed in my 91 *nor* in the on-line call stuff I have access to.

If you find them, email to

wb9omc@harbor.ecn.purdue.edu

Thanks!

Duane

1079. Questions on Alinco Mods

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 14:46:09 UTC
From: cole%tomcat@tomcat.rd.ray.COM
Message-ID: <9207231219.AA22349@tomcat.rd.ray.com>
Source record: 286955

I have recently purchased an Alinco DR-590T dual band transciever. I am interested in modifying the radio to extend the UHF receive band edge from 470MHz to 490MHz. Is there a simple way of achieving this?

I have already clipped the infamous blue wire to allow the receiver to display the aircraft band, the 300MHz band, and the 800MHz band. Is there now a way to make the rig actually receive on those frequencies?

Finally, if the radio will receive the aircraft frequencies, is there a simple AM detector I can use to demodulate the signals?

Any help is greatly appreciated. Thanks.

Okay Okay so I am not a chemist. I suspose like most I am too used to seeing limestone to think of it as metallic.

My question stills stands, is there a book like the GE Nicad book for these cells.

Bob

1081. Callsign Project Update - Addendum

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 15:13:48 UTC
From: flloyd@sunburn.West.Sun.COM
Message-ID: <l6tj5cINN6i0@west.west.sun.com>
Source record: 286959

An intersting point. The new edition of the Callsign Database,
which was apparently last updated on July 10, 1992, has nearly
30,000 more calls than the previous edition of November 25, 1991.

Message-ID: <1992Jul23.151510.20645@meaddata.com>
Source record: 286960

Murphy> While I do not own a scanner or plan to purchase one, why I am
Murphy> being put into a conflict with the rules of my home bbs. No
Murphy> commericial use of the mail or newsgroups.

Any rules about mail usage on your own system are irrelevant. It's unreasonable for you to expect the other million or so users on the net to comply with them. Thousands of sites pay for the privilege of using mail any way they please, they just don't route it over those portions of the Internet that have restrictions against commercial use.

Murphy> I feel your post is in violation. And why post in
Murphy> rec.amateur.radio and shortwave.

Several people *asked* Paul to relay their thoughts to his purchasing folks. So many of us mailed him our suggestions, and he posted a thank you note in reply. Everybody benefits, and no money exchanges hands.

Murphy> If you want a advertisment, send it snail mail...

It's really pushing it to call this advertising.

As for Paul posting an announcement about the new scanner containing useful specifications (and lacking marketing hype - it didn't even contain a price!), I think most people here appreciate that. One of us could have typed in the same information and posted it, so the fact that someone from Tandy beat us to it hardly constitutes commercial use of the newsgroup.

It seems like half the discussions in this group are about the benefits of purchasing various equipment. Are these in violation, too? Or are you saying you just want to discriminate against those who actually work for equipment manufacturers? What do you feel about Bob Parnass' equipment reviews? These might actually lead to someone purchasing something (they did in may case, actually). And he mentions prices! Call the cops...

There will be a SKYWARN class on Thursday October 1 at 1900. This session will be held in Old Bridge, New Jersey at the Old Bridge Municipal Complex.

If you are interested in attending, please drop me a note so that I can pass along to the meeting coordinator a rough idea of an attendance estimate. Your response will not be considered a committment.

Source record: 286962

> If it means you have to walk 50 feet to a call box and wait an hour
> like the rest of humanity, THAT is merely an inconvience and doesn't
> justify using the auto patch.

Bullshit. If you knock down a patch on my repeater I'd seriously consider filing a claim with the FCC. Being on the side of a freeway is dangerous. Three years of being a firefighter/paramedic whose territory included a six mile stretch of I-95, I can tell you of at least a dozen accidents (many fatal) that involved cars/people on the shoulder being struck. Any way you can get first the person and second the vehicle off the shoulder greatly improves the safety of both the person on the shoulder and the ones on the road.

This is even more important with the propensity around here to convert the shoulders into HOV (carpool) lanes.

> If you want to use the auto patch to call a tow truck and save yourself some
> inconvience, call a friend tell them what the situation is and have them call.

Eh? Explain to me how this is any less a third party business communication than making the call to Joe's towing directly.

1085. Re: "Readability, Strength" signal reports

In article <1992Jul22.193417.4561@cbnewsm.cb.att.com> jeffj@cbnewsm.cb.att.com (jeffrey.n.jones) writes:

>How would one designate those CW signals that sound like Whoop whoop? A RST >with a W on the end? 8-) Actually this is a semi serious question. What are >the technical reasons for those signals going whoop whoop? Almost impossible >for me to copy by the way.

The "whoop whoop" that you are hearing is generally known as chirp. It is caused by the transmitter's oscillator changing in frequency in response to the difference in loading (be it RF or DC) between carrier on and carrier off.

The earlier article explaining RST was mostly correct, but was wrong in describing the suffix letter. The more common suffix's are:

RSTc - c for chirp
RSTk - k for key click.

The "key click" is caused by too sharp a transition between carrier on and carrier off. It is more pleasant sounding to let the power ramp up for a few milliseconds.

1086. Re: Reciprocal Licences in the U.K

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 16:00:43 UTC
From: julian@bongo.UUCP
Message-ID: <545@bongo.UUCP>
Source record: 286828

In article <979@vk2bea.UUCP> michael@vk2bea.UUCP (Michael G. Katzmann) writes:
>The examination requirements for a B class licence are the same as
>that for an A class licence with the exception of morse. This is also
>true of the Australian 'Limited' licence BUT the US technician
>licencee must pass more theory (i.e. general class) and morse before
>he is granted the baseline HF privilages.
>In other words UK class B > US technician hence no reciprocity.

Really? In fact the difference between a U.S. no-code
Technician and a U.S. General is 13 wpm Morris. There is no futher test
for General, but there is another test for Advanced.

See the ARRL manual for further detail.

And talking of reciprocity in the strict meaning of the word.
Back in the days when U.S. Technicians needed 5 wpm Morris and U.K. B
licences needed no-code, a U.K. B license could get a U.S. recip
licence - still can. Does this seem fair? All those years that the ARRL
was saying "Morris is good for you", snotty Brits with their no-code
calls could come over here and clog the local repeaters. Not only that.
The U.S. recip license is free and the U.K. one if you could get it is
fifteen quid.

I got tired of sending in my recip application every six months
and having to explain to dimwits where a "G" call came from. so I
schlepped down to the FCC and took the Technician test, Morris and all.

So, now I just have to renew my Brit call every year and send
fifteen quid to Maggie Thatcher and Successors. My U.S. call is free,
lasts 10 years and gets re-upped automatically for another 10 years if I
file a change of address.

Is Calcium a metal?

Well, we've all put our foot in it at one time or another. In my freshman year in high school in an earth sciences class, the instructor was pressing someone for the elements corresponding to the symbols on the periodic chart. When the symbol W came up the answer given after a bit of delay, was Water.

1088. BB-139 Varicap diode... Need help finding some....

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 16:11:11 UTC
From: chuck@eng.umd.edu
Message-ID: <1992Jul23.161111.9199@eng.umd.edu>
Source record: 286966

Hi,
I asked this question about a year ago, but lost all of the responses.
I need to find a source for BB-139 varactor (varicap) diodes. Every supplier
that I ask here in the 'States says:"Never heard of it..". The diode was
used in an EATON 460 or Comstron/Adret 7100 Synthesized signal generator.

If you know where I can find a source of these diodes, I would
appreciate the help. I am even willing to mail order from overseas, if
necessary.

Thanx,

Chuck Harris - WA3UQV

turner@safety.ICS.UCI.EDU (Clark Savage Turner WA3JPG) asks:

>I don't have the handbook in front of me, but what are the standards
>for the Readability and Strength signal reports? I am constantly
>assaulted with silly reports like "five by one" or "five by zero"
>where the operator on the other side seems to use his (her) S-meter
>(now, THERE'S an accurate standard!!! :-) for the Strength report.
>It's a bit silly since the "0" purportedly means zero signal strength,
>thus impossible copy.

>S-meter differences aside, and debates about the objectivity of such
>reports reserved for another day, what are some of the standard definitions
>for Signal Strength that we all use out there in ham radio land? I would
>love to have some useful heuristic to help me give more meaningful
>reports.

S9 means the signal is loud, S7 means it's pretty loud but not the loudest
thing around, S5 means that if you're not using headphones you put them on,
and S3 means you hold your hands over the headphones or lean close up against
the loudspeaker. S1 means there's nothing there. S9 can also mean "I need
your QSL card".

Works for me -

Message-ID: <9207231231.aa27390@AED.PICA.ARMY.MIL>
Source record: 286969

Dube:
I think what you are refering to is "Caller ID" which is
available in some parts of the country. A small unit with a LCD
is connected to the phone line and displays the time, date and
phone number of each call. Since the data is sent after the first
ring, you have to wait for the second ring to see who is calling.
We have this service in New Jersey but since both your exchange and
the the caller's exchange have to be set up for the service, many calls
show as "Out of Area". Also when I call home from work which has some
sort of electronic PBX it shows as out of area. The ID units are sold
by Sears and many others and cost from $30 to $60 depending on features
(how big a memory to retain calls, etc). Monthly cost is about $5 per
phone line.

1092. Finding a used repeater.

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 17:18:06 UTC
From: cvm@nauvax.ucc.nau.edu
Message-ID: <23JUL92.17180609@nauvax.ucc.nau.edu>
Source record: 286972

I am posting this for a friend. His organization has been given a frequency pair for a repeater (158.355 and 153.??? Mhz, I don't remember the second frequency). Apparently this falls under part 90 of the FCC regs and he can run up tp 100 watts. He will be looking for a repeater at a hamfest this weekend and has been told that you can find used ones that put out 25 watts for $400-$500. Is this reasonable? What do 100 watt repeaters go for? Are there any general guidelines for looking for a used repeater for this frequency or specific brands or models to look for/avoid?

>or other power supply / RF feedback problems.)

When I think of chirp I think of a little bird chirping. Maybe the phrase should be called "Whooping". I have heard some strange sounds out there. I heard one guy sound like he was taking off as he went from a low to high pitch and disappeared. That kind of caught my attention. Also there is one ham on 20 meters CW most nights who has a serious case of the whoops. Hope it's not catching! 8-)

>
> Any others out there having trouble with this antenna??

I have an R7 and had a little problems with this... until I read the
manual a littler closer. The manual mentions something to the effect of:

The dimentions given are for a installation 8 feet off the ground and at
least 25 feet horizontal clearence from any nearby objects.

After I moved the antenna... it all tuned in GREAT!

So beware... these R7's (and R5's I assume) really want to be clear of
any objects close by (mine was close to tree's.... nothing metalic).

Hope this helps.

1096. Spread-Spectrum Transmission

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 18:09:53 UTC
From: tonyp@convex.com
Message-ID: <1992Jul23.180953.13676@convex.com>
Source record: 286975

I'm putting together a proposal for submission to the FCC
regarding amateur transmissions using spread-spectrum.

I'd like to be able to submit the results of an actual test.

Has anyone access to the following equipment, which should
suffice for initial trial-testing:

Spreadspectrum transmission: Broadband Amp (Class A) driven by Heath VF-1

Spreadspectrum reception: Knight StarRoamer

Spreadspectrum support structure: Workbench with one leg shorter
than the others. Large roll-around
chair with BIG wooden arms (for
indirect excitation of VF-1).

All results will be available in the Number 4 issue of QST in 1993.

1098. HELP!!! (antennas)

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 18:45:24 UTC
From: chhibber@andromeda.rutgers.edu
Message-ID: <Jul.23.14.45.22.1992.4589@andromeda.rutgers.edu>
Source record: 286677

Hi! I saw this article in 73 (July 1991) by WA6TLK. It shows you how to make an antenna for a 2m HT from measuring tape. My question is : What does that antenna get connected to? For that matter what do all antennas get connected to? The co-ax and BNC couplers have 2 conductors. The antenna (either this or a telescoping or any other) have only 1 conductor that radiates. Right? If so what is the second conductor in the wire for? If not, what does the second conductor connect to?

Maybe I have the concept wrong. Yes, I am a new ham. I would appreciate any help on the topic. Probably just a misconception on my part.

Please E-mail me and save bandwidth. If you think it will help others then post. Either way, thanks in advance.

1099. Re: Deed restriction bans all ham antennas

>A really GOOD point, Bill. This is what a lot of hams miss when looking
>at property...the bargaining power they might have. The moral: ALWAYS
>research the deed and review all the restrictions AS WELL AS the local
>ordinances. The deed restrictions are MUCH HARDER to fight, as they
>are part of the "contract" you agree to when you buy the property (as viewed
>by the Courts). Our sense of fairness is occasionally offended here in
>So. Calif. (and elsewhere) where there are very few places that do not
>contain deed restrictions. The whole market becomes one of "take it or
>leave it" respecting deed restrictions. That is a hard problem, and only
>the market can eventually (hopefully) shake it out. But the only sure
>bet to protect your ham antenna privileges is to obtain a deed without all
>the restrictions up front.

It is also hard for the seller to remove the restrictions. There are ways,
but unless the seller is also the one putting them in in the first place,
then it should be just as easy for you to remove them as the seller, and
maybe even easier (you have the time to go through process; the seller
might not).

If the seller is the developer, they are not as likely to listen, as they
probably have a stream of buyers they can at least use as an excuse, even
in these times of lean home sales.

One of the big problems with the deed restrictions is that the developers
and their lawyers are simply trading around the text of the deed restrictions
without considering what they restrict. The big reason for this is that they
want to be sure they have text that will hold up in court, and whenever some
lawyers text is shown in actual cases "to work", then it gets copied around.
At that point they usually won't want to mess around with the wording since
in their mind it might break it.

What we need is for a good lawyer who is a ham or is ham supportive to write
up a very carefully worded set of restrictions that allow a reasonable and
fair compromise between all the concerned parties. This won't be easy since
some people just don't like the sight of antennas at all. Others are just

worried about TVI (they often think the antenna causes it), and given that the FCC is not addressing legitimate TVI/RFI cases very well, there may not be much of a good solution.

>WA3JPG, QRP #3526, active on HF, VHF and UHF.
>Admitted to practice law in California, Massachusetts, and New York.

I guess this means you. Start up the word processor.

> harmonics across a broad spectrum.

Yes, in poorly sheilded monitors, that's true. However, it appears that
the Apple 13" monitors don't suffer from this problem.

> Thus the new low field monitors *do*
> make a marked difference in interference levels since the way they reduce
> the fields is to increase the overall effectiveness of the shielding.

Agreed.

>>Fortunately, Macs are best-sheilded and filtered computers available. Perfect
>>for the ham radio user.
>
> The etch-a-sketch, er Mac, is fairly well shielded, but is not anywhere as
> effectively shielded as a Sun or AT&T 386WGS. The latter has a double metal
> case and finger stock at all the joins. The Sun 386i is also double shielded.

Different macs use different sheilding. Various versions of the Macintosh II
family use double sheilding as well. My Mac IIx at work is fully metal
sheilding, with finger stock in the top, plus a conductive/RFI metallized
coating on the inside of the casting.

> I keep my scanner sitting on the Sun with no hint of interference. The Mac
> depends on coated plastic and a couple of flimsy shield plates.

Regardless of the materials, the models that use this technique are quite
RF-tight.

> It *is* a
> tight box though, as many people who have had them overheat will attest.
> The aftermarket in add on fans is doing well.

Gary, this type of comment really shows how dated you are. Apple hasn't sold any desktop Macs without fans in almost two years. (The powerbooks don't have fans, but they don't need them) The Mac Plus was the last desktop unit that was convection cooled and it hasn't sold since October 90. Although the compact format has always be a hot seller for Apple, most sales previous to October 90 were in the form of the fan-cooled Mac SE.

> Mac IIs are better in this
> respect, but their separate monitors do tend to radiate a lot of hash.

In the original referenced posting, it is exactly the monitor we are speaking of. My experience with this monitor shows that it radiates little or no "hash." It is just as well sheilded and filtered as the rest of the Macintosh family.

Indeed, the whole lot is FCC Class B certified. I doubt you could say the same for Suns or ATT workstations.

hmmm....never saw that post. oh well.

I have **THE** source for you: it's called ``The ARRL Antenna Book''
and there is no substitute for having this book handy. should cost
about $ 20 (US) or so.

I strongly recommend it. if you already have this book, you have detailed
plans for a lot more than just a 2m yagi.... plus (especially in the older
version I've got...the new version seems a bit lacking here) theory on how
and why lots of the designs work (well, ok, they give you the background
in the first several chapters and you can go at it from there).

-- MONTHLY REVIEW OF SOLAR TERRESTRIAL ACTIVITY --

Summary for June 1992 and Six-Month
Solar Cycle Outlook

Data Provided In-Part Courtesy of the
Space Environment Services Center, NOAA
and the
NRC / Dominion Radio Astrophysical Observatory
Penticton, British Columbia, Canada

NOTE: BEGINNING WITH THIS MONTHLY REPORT, AN EXTENSIVE SET OF MONTHLY AVERAGES WILL BE INCLUDED AT THE END OF ALL MONTHLY SUMMARIES AND WILL BE BASED ON STD-MAINTAINED DAILY SGDB REPORTS RELEASED THROUGHOUT THE MONTH.

MONTHLY ACTIVITY SUMMARY AND SOLAR CYCLE OUTLOOK JULY 1992 - JANUARY 1993

We are now in month 70 of solar cycle 22. Activity levels were up from the past several months while the average daily indices remained nearly the same as May levels. There were seven M-class flares and two X-class flares, the first X-class flares since February 1992 (an X3.3 was observed on 27 February).

Two regions were responsible for all of the observed flares. At the beginning of the month, Region 7186 (N10, L=119) produced two M-class events. The first was an M2/2B at 07/0148 UT. Associated with this flare was a 210 sfu radio burst at the 10 cm wavelength and a Type II radio sweep. The second was an M1/1B at 08/0849 UT with Type II and IV radio sweeps. Region 7205 (N11, L=313) dominated activity levels at the end of the month, being credited with three M-class events and two X-class flares. The activity began on 25 June with a long-duration M1/1N at 0740 UT, followed by a long-duration M1/1B at 1757 UT, and culminating with an X3/2B at 2014 UT. Associated with the X3 were a 10 cm radio burst of 4,000 sfu and a significant Type IV radio sweep. Region 7205 produced an M1/1F from the west limb at 26/0415 UT and everyone thought that was the last of Region 7205. But on 28 June, two days beyond the west limb, Region 7205 erupted once more. This time with a long-duration X1/SF at 0514 UT. Loops were visible at N11 and the associated 10 cm radio burst was 1,200 sfu. A long-duration M1 prior to and one following the X1 were uncorrelated but are presumed to have originated in Region 7205 also.

A satellite level proton event at the greater than 10 MeV level began at 25/2045 UT following the X3. A peak flux of 390 pfu was recorded at 26/0610 UT, with some higher energy particles also detected. The greater than 100

MeV protons peaked at 14 pfu at 25/2100 UT. The greater than 10 MeV proton event ended at 29/1355 UT. A maximum PCA of 5.6 dB was observed at Thule at 26/0930 UT. The PCA ended at 27/1000 UT. There were several sites which reported a weak ground level event (GLE) associated with this activity.

The geomagnetic field was mostly unsettled to active. The most disturbed day a mid-latitudes was 12 June when minor storm conditions prevailed. A distinct source for this disturbance was not determined. Some periods of minor to major storming were recorded on 29 and 30 June, most likely a reaction to the X-class flaring of 25 and 28 June.

Activity levels appear to be on the rise. Several regions this month have been "hotter" and more magnetically complex than regions of the past several months. Although in the declining phase of cycle 22, activity in this cycle has dropped too fast and is too low when compared to previous cycles. Therefore, a return to more active levels is likely and is probably what we are beginning to see. Most experienced observers expect to see an increase in activity with a peak sometime around September with average 10.7 cm flux levels at about 160.

The lowest smoothed sunspot number for Cycle 21, RI = 12.3, occurred in
September 1986. The sunspot maximum for this cycle (cycle 22) occurred in
July 1989, with a peak smoothed sunspot number (RI) of 158.1.

Note: Prior to June 1991, the 10.7 cm solar radio flux measurements
originated from the Algonquin Radio Observatory near Ottawa. From June 1991
onward, the flux has been (and will continue to be) measured from the
Dominion Radio Astrophysical Observatory at Penticton, British Columbia,
Canada.

As I've mentioned before, I'm trying to "work all states 10m Mobile SSB".

I've had a QSO with all but New Mexico, Colorado, Wyoming, and Montana.

Anybody in one of those states who would be willing to try to work some
sort of Sporadic E sched?

Thanks, we now return you to your regularly-scheduled flamefest :-)

>
> ...
>
> Does anyone else know of similar historical (or biblical) figures?

Well, there's Henry VIII, who wrote the first definitive text on inductance.
Old timers will remember Andrew Jackson's vernier drives. And George
Armstrong Custer was killed at the Little Bighorn, an antenna ordinance
dispute over a microwave antenna that got out of hand.

1107. bogus air traffic control transmissions

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 23:29:40 UTC
From: haynes@cats.ucsc.edu
Message-ID: <14nfd4INNjqe@darkstar.UCSC.EDU>
Source record: 286887
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.shortwave

There has been some discussion on rec.aviation about bootleg/pirate
air traffic control transmissions. Oakland, Los Angeles, and Boston
were mentioned. Pilots flying through those areas are being advised
to confirm with the tower or control center if they are given questionable
instructions. In some cases the FAA operator cannot hear the pirate,
so doesn't realize what is taking place.

Seems to me this is an area where hams and scanner enthusiasts might be
helpful. If you are in the habit of listening to air traffic control
transmissions, and you start hearing a ground station that wasn't there
before, you might be hearing a pirate in your neighborhood. Some hams
have expertise in direction finding and could apply that toward helping
the authorities locate these nuts.

1108. PVC pipe outdoors

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-23 23:54:16 UTC
From: chhibber@andromeda.rutgers.edu
Message-ID: <Jul.23.19.54.15.1992.14340@andromeda.rutgers.edu>
Source record: 286578

Hi! Just as the smmary says: Is regular PVC pipe good enough to use
for an antenna mast? The antenna will be a small 2m ant. Probably
a Lazy-J or a 5/8 whip with radials.

a) Is PVC durable? Will it live thru a few seasons?
b) How long a length of PVC pipe will stand straight by itself? What about
wind? (This will be mounted off my roof, somehow).
c) If PVC cannot take the "elements", will painting or protecting it help?
d) Will it affect antenna performance? I don't think so, but.......

What about PVC for Quads?

I would appreciate any help.

Thanks in advance.

The Magellan does "look" to be more rugged, but it's hard to say, the Garmin
has received some fairly rough treatment, with no problem. It is a bit
confusing to program too.

> Second, the Magellan provides
> for multiple "map datums" (I know, the plural of datum is data, but that's
> what they call it). If you're using it for navigation, and you're using a

> well. A friend accidentally left his on while his boat was at the dock,
> and when he returned discovered that the boat had travelled (supposedly)
> several miles, simply because the GPS kept getting slightly different

> readings!
As you say, the manufacturers claims I have seen are better than this. I haven't done any exhaustive study of the thing, but I took the GPS50 on vacation, and passed a few roadside markers marking latittude, and the thing was accurate at least within 100 feet. I passed one marker three times, and it was right on every time. Also, I have programmed in the location of my home, work, and a few other places, and have been watching the thing for a couple of months now, and it gives me the same reading every day. I don't know if the absolute positions are correct, but it has never shown any variation in position of more than a couple hundred feet, if that much. Anyway, I am impressed with the thing. It may not be quite as good as the claims, but I have never seen it off by 300 meters.
Of course I don't use it for anything important (like sailing through channels), so if I had to depend on it I might be more critical of its performance.

1111. [ANS] Reciprocal Licences in the U.K

Newsgroup: rec.radio.amateur.misc

Source record: 286889

>In other words UK class B > US technician hence no reciprocity.
>
Not so sure that's correct. Talk to N3KIP (aka G8VUK) in Waldorf
Maryland. He came over with the British verison of a no-code
and had recip previliges BEFORE the FCC came out with the no-code
ticket.

BTW, G8VUK went from no U.S. license to Extra class in less than
a year..

1112. Re: Comments on Diamond X-500HNA for Repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1992-07-24 02:13:41 UTC
From: gary@ke4zv.uucp
Message-ID: <1992Jul24.021341.3855@ke4zv.uucp>
Source record: 286894

I haven't been terribly impressed with the performance of the Diamond antennas. At our repeater we use a Comet 712E. It's at 970 feet on a broadcast tower and has survived for two years so far. Excellent antenna, much better than the four pole that was up previously. Last week the broadcast transmitter was trashed by lightning, but the Comet and it's repeater continue to work. There are some burn marks on the antenna from strikes over the last two years, but performance continues to be excellent. It's only bottom mounted with the top free to sway.

[munch]

If it's a life threatening emergency, call 911. That's what it's for
and no one will question the call. If it doesn't justify a call to 911,
it isn't an emergency. Frankly, cell phones are cheaper than ham rigs
and are ideal for this kind of roadside repair business.

From: johns@uhunix.uhcc.Hawaii.Edu
Message-ID: <1992Jul24.040541.7406@news.Hawaii.Edu>
Source record: 286892

I have put up an R7 in several locations. On the roof of a 9-story
building it tuned up "as advertised", the dimensions in the manual
were right on the money. At Field Day we needed a tuner on 20-40 meters.
Objects in the near field of any antenna will detune it.

waco@cbnewse.cb.att.com (john.l.broughton) writes:
:
: 1. I don't think restrictions are generally able to be removed via
: negotiation; congrats to the ham who could do so.
I agree, the only exception I can think of would be when one was buying
into a new(er) development, in which the developer WAS the association.
In fact, that's how I got my weather station mast (which is potentially
"illegal" if one takes a strict interpretation of the CC&Rs) approved.
:
: 3. While it can't hurt to press the FCC to extend PRB-1 logic and rules
: to CC&Rs, there is probably a better way. Get Congress to modify
: the Communications Act. Congress makes the law and the FCC is charged
: with implementing it. I would think there would be fewer lawsuits;
: PRB-1 is challenged often and judges sometimes rule against the ham and
: for the restrictions in spite of PRB-1 -- BUT YOU WOULD NEVER KNOW IT BY
: READING QST -- c'mon, ARRL; give us the good news with the bad!!
I agree - and this is one case where I think ARRL could (and SHOULD) help.
Would someone from ARRL please respond and tell us what it will take to
get the League involved in this - there must be at least a FEW sympathetic
congresscritters who could get something like this attached as a rider
to another bill.

:
: 4. I feel it is important to our hobby to remove these restrictions. It
: is very rare nowadays around this area to find a new subdivision that
: doesn't prohibit outside antennas. This is usually not for RFI problems,
: but for aesthetic purposes; don't we all want politically correct
: neighborhoods and be free from the having to gaze upon "unsightly" TV,
: satellite and amateur antennas?
EXACTLY!

>cells.

I have had people make funny sniffing noises when they ask a
technical question on an amateur forum and I come back with a reference
in an amateur publication. But here it is:

The best article I have ever seen on lead acid batteries was a
three part article in QST. Issues March, April, May 1990. Written by
George L. Thurston, W4MLE. If the articles do not answer your
questions, I am sure he could point you in the right direction.

If anyone has a copy of the May article, I would appreciate a
copy, I have lost mine.

Brian Kantor recently posted a nice piece about lead acid
batteries to the net. Maybe he will repost. I have a copy if he lost
his.

A small but important point. I and many of my coworkers are
spending increasing amount of time on the job and have less time for
home and hobby. for me, an easy week is only 50hrs with a 2 day weekend.
I feel there is an increasing trend of companies sucking their staff dry
well before retirement. With all of the demands on one's life, it
is astounding that we have people with *any* hobbies.

I was told that there was a 2510 mod for a power mod (~100 Watts/SSB) that appeared in 73 Amateur Radio.

Unforunately, my library doesn't think enough of amateur radio to have much info on hand, and only has old issues of QST on microfilm.

If someone has the power mod for the 2510 transcribed, please mail me a copy.

From: jkearman@arrl.org
Message-ID: <305@arrl.org>
Source record: 286861

jkearman@arrl.org (Jim Kearman) writes:

>1. It's either business or it isn't. If it isn't business
>related, it's legal.

D. Jenkins writes:

Jim,
I understand what you are saying and am quite clear on what is business
and what isn't. Or at least I WAS until the other day when I received
a booklet from the ARRL "Welcome to Amateur Radio - All About FM Repeater
Operation" by Brian Battles, WS1O. Clearly, it was intended to arrive BEFORE
I got my ticket and keyed up for the first time. (So it was 1.5 months late.)

There are a few seeming contradictions in that booklet which I would be glad
to comment on to the appropriate person (WS1O isn't in the usenet list).

One issue covered in that booklet confused me: The age old issue of calling
for help from the Highway. I understood that I cannot call AAA or a tow
truck via the autopatch because it is CLEARLY business for the other party
even though it is rescue traffic to me. This booklet suggests that this is OK
since it has to do with potential loss of human life or property.
(I would quote chapter and verse, but, I left it on the table at home.)

The brochure is sent out when we get the latest printout of new
hams from FCC. That's why it came after you got your license.

Emergency communications supersede all others, and are the only
time you can 'violate' FCC regulations and be in the clear. It's
okay to call for help, even if someone gets paid for helping you.

Likewise, it would be legal for a Tech-class licensee whose boat
is sinking to call for help on the 20-meter band. (Puleeze don't
flame me; it's assumed that's the most-efficient way to call for
help in this case, or the person wouldn't risk his neck doing it.)

There is a clause in the FCC Part 97 rules pertaining to communi-
cations when life or property are threatened.

If you think about it, calling the police is okay, even though
police officers are paid.

73, Jim

>--

Here's the UPI story.

CHICAGO (UPI) -- William J. Halligan, founder of Hallicrafters Co., a manufacturer of electronics equipment, has died. He was 93. Halligan died July 14 in a Miami Beach, Fla., hospital.

Hallicrafters was founded in Chicago in 1933 and intially made precision shortwave sets for amateur radio operators. They were manufactured at a plant on the city's South Side.

During World War II, Hallicrafters made shortwave radios for the military and began manufacturing television sets and radar after the war. Its radios were sold through catalogs of Sears, Roebuck and Co. and Montgomery Ward and Co.

In the 1960s, the company moved into space communications systems. Halligan was president and later chairman of Hallicrafters, which was acquired by Northrop Corp. in the 1960s. He retired in 1967.

Halligan attended West Point but quit to become a newspaper reporter in Boston and New York. He was a sales manager for a Boston radio supply company before he started Hallicrafters.

Private services were held Monday.

Thanks for the interest. The 30 meter trap is the one giving me the
most trouble. The traps that are common with the R5 are almost perfect.

To get away from surrounding objects I went to the beach on the outer
banks of NC. Is that far enough? I do have alot of trees on my lot
at home. I hope to take it up in the Mountains of NC soon to try
again.

>Maryland. He came over with the British verison of a no-code
>and had recip previliges BEFORE the FCC came out with the no-code
>ticket.

Yes, you can check with G8LUK (Who Dat?) too. He also came to
the U.S. with an evil no-code licence and recieved a Technician
reciprocal in the days of "Everybody gotta have Morris". There is "no
reciprocity". The U.K. "Technicians" get to play radio in the U.S. and
the U.S. amateurs are not allowed to play radio in the U.K. It has
always been this way. I am trying to change it. Every time I write
about it, someone challenges my understanding of the subject. Then as
above, it is pointed out that they are a tad off.

Is this a tricky concept to grasp? Trying to keep it simple.
The U.S<>U.K. agreement is old and creaky. It needs updating to reflect
the current state of licensing in both countries. I spoke to the U.K.
Radiocommunications Agency. They told me they are looking into it in
"Minute detail". They said they should have a decision in six months. I
assume the FCC are in the loop here somewhere. I have not contacted
them yet. I am trying to find out who in Washington to talk to.

In my persuit of this problem over the years, the ARRL has been
not very helpful.

I am interested in becoming initiated into the ranks of QRP. My TS 440 will probably throttle down to 5watts, however, it won't fit into my backpack.

I've looked at some of the articles and advertisements for the A&A kits, Ramsey kits and the MFJ 20m rig. The MFJ, despite some of the comments I've heard about the company (M&$%#$ F**%&L Junk) sounds like it has promise. The latest 73 mag did a review that indicated some changes will be in the offing with this new rig.

Before I leap into the foray, I would like to hear your comments, both good and bad about any/all of the above. Thanks for your time and input.

All of the exam pools are available as freeware Hypercard stacks written by Diana L. Syriac, and can be ftp'd from uxc.cso.uiuc.edu:/pub/ham-radio and the other usual ftp suspects. Note that you need a Macintosh to make use of these, but, hey, you need a Macintosh anyway :-).

Also, the pools are available as text from uxc.cso.uiuc.edu:/pub/ham-radio (and no doubt many other places). I don't know if there are any freeware DOS programs, but I wouldn't be at all surprised; shareware authors should try to pick niches that aren't already full, unless they have done an INCREDIBLY excellent job...

>Patty

>(FYI, I'm not--although I'm about to re-up. Both decisions were made
>for personal reasons having nothing to do with whether I agree with
>every League policy.)

Patty,

I work here at Headquarters and can tell you with certainty that not all of US agree with every League policy! :-). The way I like to put it to people is this: If you feel that any organization is doing any one thing that is important to you, join the organization to support that activity or program. That also gives you the opportunity to influence (and more effectively complain about) all the rest.

The ARRL is not located in Newington. The Headquarters and Headquarters staff is located in Newington. We are an important part of the ARRL, but the most important part is the membership and the Field Organization. It is their activities (or inactivities) that really shape what this organization is about. I could not possibly agree with the activities and programs of an organization that consists of 160,000 parts.

Your comments about not sitting on the sidelines are well put. One of the biggest problems faced by any organization from the local civic club to the largest organization is apathy. Ham radio is often just what the individual players make it. I applaud the doers and do what I can to encourage the watchers to play a more active role.

But don't be too quick to condemn the flamers. We need them for a lot of reasons. First, they are among those who care about ham radio and the issues that confront us. The fact that they are willing to sit in front of their keyboards and hold up their ideas for the world to look at suggests that there are probably a lot of doers among their ranks. Also, I have noticed that there is a lot of valid criticism among the flames. No individual or organization is perfect, and there is always room for

improvement. I just wish all of the suggestions were constructive, but
I am willing to read between the lines to find a good idea. :-)

This is part of the reason that I do not leap to the defense of ARRL every
time a flamer comes on the net to roast us. I encourage other staff to
tread lightly, too, although we are not of one mind here -- each of us
acts on his or her own. I don't want to stifle needed criticism and feedback
by jumping on each person who disagrees with something we have done. We
need that feedback to let us know when we have dreamed up a bad idea
or undertaken a poor program. Feedback also serves to point out pitfalls
so that we can avoid them before they cause us or Amateur Radio harm.

Let's all keep it in perspective. If we communicate peacefully to resolve
differences we will either resolve those differences, or realize that we
really don't have such major differences at all.

Gang,

for the humor impaired:

When the code comes fast and sh***Y,

Just lay back and send di-di-dah-dah-dit-ditty!

For the cw impaired. di-di-dah-dah-di-dit is a question mark. :-) ;-)

All in above in good humor but not necessarily in good taste.

As a side note.

I have purchased and assembled the following QRP rigs.

1. A&A Engineering 20 Mtr QRP xcvr
2. Oakhill Research 20 Mtr QRP xcvr
3. Tejas RF Technology 20 mtr QRP xcvr
4. MXM Engineering 40 Mtr xmtr/receiver

I have the schematic for the Tejas in PostScript format. I need an ftp
site for everyone, so that i can place it there. The other rig schematics
available in short order and also to be deposited same place.

i'm doing a review and comparison article for the QRP Quarterly and will
post some observations to the net as i progress.

Anyone going to the Oklahoma City Swapfest this weekend? I need directions.
I CAN get to OKC, just need to know how to get to the fair grounds as i will
be coming from the south on highway I35.

| memorize half the alphabet and still remembers it a year later with very
| little practice in between. The written exam is another issue.
|
| I expect to see most kids in that age range to enter ham radio as Novices.
| No-code tech is best for those who are old enough the understand the
| technical questions and don't care to learn CW.

Yep. This is exactly the way it is. Of course there are now question pools and stuff that help overcome the difficulty of the written exam, but all we had back in the early 70's was the ARRL License Manual, and it was *crraap!* I wanted to learn the stuff I needed to know to get my ham ticket, but it was really hard. When I would ask other hams (grown ups, of course) what I could do the learn the stuff, they would say things like "read the ARRL Handbook."

I took this advice to heart and started reading. The Handbook is a really cool book, but not for kids. One of the things I had a big interest in was how to make worldwide contacts on the radio. People would say things like "15 and 20 are good during the day, 40 and 80 are nighttime bands" and I thought "this stuff is great -- how do I learn more?" And I was told "read the ARRL handbook." So I did. Imagine your eight year old child trying to read this stuff, ugh. This is the first part of the first section of Chapter 19 of the 1973 Handbook.

Characteristics of Radio Waves

"Radio waves, like other forms of electromagnetic radiation such as light, travel at a speed of 300,000,000 meters per second in free space, and can be relflected, refracted, and diffracted.

"An electromagnetic wave is composed of moving fields of electric and magnetic force. The lines of force in the electric and magnetic fields are at right angles, and are mutually perpendicular to the direction of travel. A simple representation of a wave is shown in Fig. 19-1. In this drawing the electric lines are perpendicular to the earth and the magnetic lines are horizontal. They could, however, have any position with respect to earth so long as they remain perpendicular to each other.

"The plane containing the continuous lines of electric and magnetic force shown by the grid- or mesh-like drawing in Fig. 19-1 is called the wave front.

"The meduim in which electromagnetic waves travel has a marked influence on the speed with which they move. When the meduim is empty space the speed, as stated above, is 300,000,000 meters per second. It is almost, but not quite, that great in air, and is much less in some other substances. In dielectrics, for example, the speed is inversely proportional to the square root of the dielectric constant of the material."

and so on.

I don't think the math was much of a problem. I knew what a square root was when I was eight. I think the language was more of a problem. I could look up "dielectric" and "constant" in the dictionary, but I really had no feel for what a "dielectric constant" was. I have seen enough of this language now that I no longer permit myself to be buffaloed by it.

I am also a lot smarter now about how to read things than I was back then. When people said "read the Handbook" I felt I needed to read *all* of it, so I would start and the beginning of a chapter and plow ahead. Now I am old enough to realize that the material cited above is *crraap* and that I should have really skipped ahead a few pages to the section called "Propagation in the bands below 30 MHz."

When I hear people starting to get shrill about getting youngsters involved in ham radio, I often take note, especially when they start talking about CW being an obsticle. I think this problem with the heavy language is much more of an issue than CW for kids. CW is a closed thing. There are about about 40 symbols you need to learn and either you can send/copy it at 5 WPM, or you can't. The technical stuff is much more open ended. Nobody every really learns all of it. Figuring out what you need to know and what you don't need to know is much harder at that age.

>Gary KE4ZV

What if you don't have celluar coverage in your area? In Flagstaff our celluar coverage only encompasses an area slightly larger than the city. Most of the roadside emergencies that I have heard on the local repeater occur farther out of town. Cars stranded on the side of the road, especially at night, can be a big danger. My first attempt would be to get another ham to call a tow truck for me, but if that didn't work, I would not hesitate to use the autopatch to make the call myself.

73, Bob W3OTC

Bob,

You have the right idea. I truly hope that all people who want to actually influence this decision that will be made by the ARRL Board of Directors will take the time to contact their Division Directors and make their view known (on this or any other ARRL policy matter).

You can do this by telephone (most Directors list their phone numbers), by letter or postcard, or in person. Most Directors show up at major hamfests and ARRL State or Division Conventions. One of the most effective ways to influence a Director is to attend the ARRL Forum that is usually conducted wherever a Director goes. Most of the time the Directors address the current "hot-button" issues, and, even if your topic is not brought up by the Director, they invariably ask if anyone has any comments. Speak right up! You will often find that there are others in the room that agree with you (bring them along as ringers if you like). I have often been bothered by the relatively low attendance at ARRL Forums. In a hamfest that has an attendance of 2000 I have seen as few as 20 attendees at the ARRL Forum. I know that we all go to a hamfest for the 'fest part, but many sensitive issues are dealt with by the ARRL Directors, based primarily on the input they receive from hams in their Divisions. Take the time to address the issues that are important to you.

You can find your Division Director listed on page 8 of QST. (If you don't get QST (non-member, new member, potential member, blind member, etc.), I will be happy to mail you a copy of page 8.) Speak up! Flame us if you like (politely, please), but speak up. If you tell your Director what you think and the Director votes differently, you have every right to complain (with your next ballot if you choose), but if you don't take the few minutes it takes to have your say, you will never know whether your idea might have been the one that saved the day or whether your "vote" may have been the

one to tip the scale.

The average age disparity between hams and the general population is
54 versus 34. Now your thought experiment is flawed because negligible
numbers are entering our ranks from the youngest cohorts, and because
hams, on average, don't live as long as the general population. You've
neglected to shrink the size of the older cohorts to account for death.
When you do that, and discard the lowest age cohort, the average age of
hams should be 39. So hams are 15 years older than they should be if the
popularity of ham radio wasn't sharply reduced among the teenage groups,
traditionally the cohort with the highest rate of joining ham radio.
We're an old white man's hobby, and we have been growing more so until
very recently. Since no code, the average age of hams has declined by
six months. That indicates that younger people are again joining more
rapidly than older people, or it could mean that the oldest hams are
reaching an age where they are dying rapidly. There is a demographic
bulge in our population curve from the rapid growth of the hobby in
earlier years, pre-1960s. Those people are approaching death in increasing
numbers.

>the same for Suns or ATT workstations.

Class B certification is fairly meaningless. The permitted radiation levels in Class B are far in excess of the levels that can upset communications receivers. The amount of shielding employed and the care with which it is installed is much more important than an FCC label. BTW most of the Mac IIs that I have seen in operation are using an aftermarket monitor such as the NEC or Radius.

Bill, you come across as an Apple salesman trying to make the million dollar club. The little 9 inch toasters are interesting toys, and some Mac IIs are actually good work platforms, but they aren't God's gift to computing. You're talking to a ham audience, and that group is notoriously cheap. Used workstations, PC clones, and old Apple IIe's are the currency of their stations. Apple's pricing structure means that hams aren't considering them as their first choice. I can get a color Sun 386i for $750 on the surplus market, I'm not going to pay three or more times as much for less computer.

1140. QuickRef for your pro-3x pro-4x scanner

Below is the quickref that I created to hang on the wall next to my pro-34. It fits on two pages (66 or 60 lines) if you space it correctly. It has spaces for 9 banks, and lists the 10-codes down at the bottom. It works best if you edit this using overwrite on your text editor, typing in the necessary information. The blanks are too small to write in by hand. This may or may not be of any use to anyone, but thought I'd post it anyhow. I use bank 10 for "temp" storage, and it wouldn't fit on the page anyway!
